

### Special in this issue

#### 33. Preview of the Comprehensive Revision of the National Income and Product Accounts: Recognition of Government Investment and Incorporation of a New Methodology for Calculating Depreciation

One major improvement in the upcoming NIPA revision will be the treatment of government purchases of structures and equipment as investment, which will result in a more complete and consistent measure of investment in the NIPA's. Another major improvement will be the implementation of a new methodology for estimating depreciation, which will put these estimates on a firmer empirical foundation.

### Regular features

#### 1. Business Situation

Real GDP increased 1.3 percent in the second quarter of 1995. BEA's alternative measures of real GDP increased less—0.7 percent. Corporate profits increased \$11.4 billion, largely reflecting an increase in the profits of nonfinancial industries.

#### 42. U.S. International Transactions, Second Quarter 1995

The U.S. current-account deficit increased \$4.6 billion, to \$43.6 billion, in the second quarter. Most of the increase was due to a larger merchandise trade deficit, reflecting faster growth in imports than in exports; the deficit on investment income also increased. These increases were partly offset by a slight increase in the surplus on services trade and a slight decrease in net unilateral transfers.

#### 68. U.S. International Sales and Purchases of Private Services: U.S. Cross-Border Transactions, 1994, and Sales by Affiliates, 1993

In 1994, U.S. cross-border purchases of services from foreigners rose more rapidly than U.S. sales of services to foreigners. The pattern of faster growth in purchases than in sales also characterized services transactions through majority-owned affiliates in 1993, the latest year for which data are available. During 1993–94, purchases of services were stimulated by economic expansion in the United States, while sales of services tended to be constrained by sluggish economic conditions in major foreign economies.

### LOOKING AHEAD

**National Income and Product Account Revision.** The upcoming comprehensive, or benchmark, revision of the national income and product accounts (NIPA's) is scheduled for release late this year. A box on page 34 provides dates for the release of the revised estimates and some changes in the schedule for NIPA news releases that are required to accommodate the earlier release of information from the comprehensive revision. An article in the October SURVEY will preview the changes in NIPA table formats that will be introduced in the comprehensive revision.

**Composite Indexes Revision.** The annual revision of the composite indexes of leading, coincident, and lagging indicators will be presented in the October 1995 SURVEY. The indexes will be revised from 1990 forward to incorporate revised data for component series. Over the next few months, The Conference Board will be taking over preparation and dissemination of the composite indexes. BEA will soon discontinue the "Business Cycle Indicators" section of the SURVEY, probably by the end of 1995.

**Ownership-Based Disaggregation of the U.S. Current Account.** An article presenting a disaggregation of U.S. current-account transactions along ownership lines for 1982–93 is scheduled for the October SURVEY. The article updates and extends an earlier BEA effort to supplement the standard disaggregation, which groups transactions primarily on the basis of types of goods and services traded, with a disaggregation that groups transactions on the basis of whether they represent trade within multinational firms or trade between unaffiliated parties.

# B U S I N E S S S I T U A T I O N

Larry R. Moran prepared the first section of this article, and Daniel Larkins prepared the section on corporate profits.

**T**HE "FINAL" estimate of growth in real gross domestic product (GDP) for the second quarter of 1995 is 1.3 percent, 0.2 percentage point higher than the "preliminary" estimate reported in the August "Business Situation" (table 1).<sup>1</sup> Revisions to the components of GDP were small;

1. Quarterly estimates in the national income and product accounts are expressed at seasonally adjusted annual rates, and quarterly changes are differences between these rates. Quarter-to-quarter percent changes are annualized. Real, or constant-dollar, estimates are expressed in 1987 dollars and are based on 1987 weights.

**Table 1.—Revisions to Real Gross Domestic Product and Prices, Second Quarter 1995**

[Seasonally adjusted at annual rates]

1. Based on 1987 weights.

NOTE.—Final estimates for the second quarter of 1995 incorporate the following revised or additional major source data that were not available when the preliminary estimates were prepared.

*Personal consumption expenditures:* Revised retail sales for June.

*Nonresidential fixed investment:* Revised construction put in place for May and June, revised manufacturers' shipments of equipment for June, and revised shipments of complete civilian aircraft for June.

*Residential investment:* Revised construction put in place for May and June.

*Change in business inventories:* Revised manufacturing and trade inventories for June.

*Net exports of goods and services:* Revised merchandise exports and imports for June and revised exports and imports of services for the quarter.

*Government purchases:* Revised State and local government construction put in place for May and June.

*Net interest:* Financial assets held by households for the quarter and net interest from the rest of the world for the quarter.

*Corporate profits:* Revised domestic book profits and profits from the rest of the world for the quarter.

*GDP prices:* Revised housing prices for the quarter and newly available export and import prices for the quarter.

consequently, the general picture of the economy is little changed from that reported in August: GDP increased less in the second quarter than in the first. Change in business inventories decreased sharply in the second quarter after increasing slightly in the first; nonresidential fixed investment increased less than in the first quarter; and residential fixed investment decreased more than in the first quarter. In contrast, personal consumption expenditures (PCE) increased more in the second quarter than in the first; net exports decreased less than in the first quarter; and government purchases increased slightly after decreasing.

The largest upward revisions to second-quarter estimates were to government purchases, \$2.3 billion, and to change in business inventories, \$1.6 billion. The largest downward revision was to nonresidential fixed investment, \$1.0 billion. In government purchases, the upward revision was in national defense and in State and local government. In change in business inventories, the upward revision was more than accounted for by inventories of durable goods other than motor vehicles held by merchant wholesalers. In nonresidential fixed investment, the downward revision was about evenly divided between structures and producers' durable equipment (PDE); within PDE, the revision was more than accounted for by computers and peripheral equipment.

The final estimate of real gross domestic purchases shows a 1.9-percent increase, 0.2 percentage point higher than the preliminary estimate.

The final estimate of the fixed-weighted price index for gross domestic purchases shows an increase of 3.2 percent, 0.2 percentage point higher than the preliminary estimate. The final estimate of the GDP price index shows an increase 2.8 percent, the same as the preliminary estimate.

BEA has changed some of the release dates for NIPA estimates in order to accommodate an earlier release of information from the upcoming comprehensive NIPA revision (see box on page 34).

The decrease in real disposable personal income was unrevised at 1.1 percent; an upward revision to current-dollar disposable income was offset by an upward revision to the PCE implicit price deflator. The personal saving rate was unrevised at 4.0 percent.

**Alternative measures.**—In the second quarter, both of BEA's alternative measures of real GDP—the chain-type annual-weighted measure and the benchmark-years-weighted measure—increased 0.7 percent (0.2 percentage point higher than the preliminary estimates), 0.6 percentage point less than the fixed-1987-weighted measure of real GDP (table 2). The difference between

the changes in the fixed-weighted measure of real GDP and in the alternative measures was more than accounted for by purchases of computers, a product whose prices have decreased steadily since 1987. The decrease in change in business inventories reduced the difference between the changes in fixed-weighted measure of GDP and the alternative measures from what it otherwise would have been; inventory prices have increased less than overall prices since 1987.

For prices of gross domestic purchases, both the chain-type measure and the benchmark-years-weighted measure increased 3.0 percent, 0.2 percentage point less than the fixed-weighted measure.

**Table 2.—Fixed-Weighted and Alternative Quantity and Price Indexes**

<b>Equals: Command-basis gross national product</b> .....	<b>5,485.2</b>	<b>44.4</b>	<b>12.1</b>	<b>3.3</b>	<b>.9</b>
<b>Addendum:</b>					
Terms of trade <sup>1</sup> .....	101.3	.2	-.4	.8	-1.6

1. Ratio of the implicit price deflator for exports of goods and services and receipts of factor income to the corresponding implicit price deflator for imports with the decimal point shifted two places to the right.

NOTE.—Levels of these series are found in NIPA tables 1.10 and 1.11.

**Gross national product (GNP).**—Real GNP (as measured using fixed weights) increased 1.1 percent in the second quarter, 0.2 percentage point less than the increase in real GDP (chart 1 and table 3).<sup>2</sup> Receipts of factor income from the rest of the world increased less than payments of factor income; profits accounted for two-thirds of the increase in receipts, and interest income accounted for more than two-thirds of the increase in payments.

Real GNP on a command basis increased slightly less than real GNP in the second quarter—0.9 percent, compared with 1.1 percent—reflecting a deterioration in the terms of trade.<sup>3</sup> In the first

2. GNP equals GDP plus receipts of factor income from the rest of the world less payments of factor income to the rest of the world.

3. In the estimation of real GNP, the current-dollar value of exports of goods and services is deflated by export prices, the current-dollar value of

**CHART 1**

**Selected Product Measures: Change From Preceding Quarter**

Percent

Note.—Percent change at annual rate from preceding quarter; based on seasonally adjusted estimates.

U.S. Department of Commerce, Bureau of Economic Analysis

quarter, command-basis GNP increased slightly more than GNP—3.3 percent, compared with 3.2 percent—reflecting an improvement in the terms of trade.

### Corporate Profits

Profits from current production increased \$11.4 billion in the second quarter after increasing \$9.4 billion in the first (table 4).<sup>4</sup>

imports of goods and services is deflated by import prices, and the current-dollar values of receipts and payments of factor income are deflated primarily by the implicit price deflator for net domestic product. In the estimation of command-basis GNP—a measure of U.S. production in terms of its purchasing power—the current-dollar value of exports of goods and services and receipts of factor income is deflated by the implicit price deflator for imports of goods and services and payments of factor income. The terms of trade is measured by the ratio of the implicit price deflator for exports of goods and services and receipts of factor income to the corresponding implicit price deflator for imports, with the decimal point shifted two places to the right. (Because the terms of trade is based on implicit price deflators, rather than on exchange rates, it may reflect changes both in prices and in the composition of exports and imports.)

4. Profits from current production is estimated as the sum of profits before tax, the inventory valuation adjustment (IVA), and the capital consumption adjustment (CCAdj); it is shown in NIPA tables 1.14, 1.16, and 6.16C as “corporate profits with IVA and CCAdj.”

NOTE.—Levels of these and other profits series are found in NIPA tables 1.14, 1.16, 6.16C, and 7.15.

IVA Inventory valuation adjustment  
CCAdj Capital consumption adjustment

The small step-up was more than accounted for by an upturn in profits from domestic operations of nonfinancial corporations. Unit profits of these corporations rebounded from a first-quarter drop and more than offset a slowdown in the real gross product of nonfinancial corporations. The rebound in unit profits was attributable to unit labor costs, which decreased in the second quarter after increasing in the first; unit prices were unchanged in both quarters.

Profits from domestic operations of financial corporations changed little after increasing. Profits from the rest of the world increased less in the second quarter than in the first.

Cash flow from current production, a profits-related measure of internally generated funds available for investment, increased \$17.6 billion after increasing \$9.1 billion. The ratio of cash flow to nonresidential fixed investment, an indicator of the share of the current level of investment that could be financed by internally generated funds, increased to 76.4 percent from 75.4 percent; the increase followed six consecutive decreases.

**Industry profits.**—Industry profits increased \$14.3 billion after increasing \$10.2 billion.<sup>5</sup> Profits of nonfinancial industries increased \$9.7 billion after decreasing \$6.8 billion. The upturn was concentrated in the transportation and public utilities group and in nondurable manufacturing; in contrast, profits in trade decreased about as much as in the first quarter, and profits in “other” nonfinancial industries slowed. Profits of financial industries increased \$1.0 billion after increasing \$8.0 billion; the slowdown mainly reflected a downturn in profits of commercial banks.

Profits from the rest of the world increased \$3.6 billion after increasing \$9.0 billion. This component of profits measures receipts of profits from foreign affiliates of U.S. corporations less payments of profits by U.S. affiliates of foreign corporations. In the second quarter, a slowdown in receipts was accounted for by foreign affiliates in manufacturing and in other nonpetroleum industries; a partly offsetting step-up in payments was accounted for by domestic affiliates in manufacturing and petroleum.

5. Industry profits are estimated as the sum of profits before tax and the inventory valuation adjustment (IVA); it is shown in NIPA table 6.16C as “corporate profits with IVA.” Estimates of the capital consumption adjustment do not exist at a detailed industry level; they are available only at highly aggregated levels—that is, for the totals of financial industries and of nonfinancial industries.

*Related measures.*—Profits before tax increased \$3.5 billion after increasing \$17.1 billion. The difference between this slowdown and the modest step-up in profits from current production is more than accounted for by a downturn in inventory profits, which are represented in the NIPA's (with sign reversed) as the inventory valuation adjustment. The downturn in inventory profits was offset only a little by the capital consumption adjustment, which converts depreciation as reported by business to the measure used in the NIPA's; in the second quarter, the capital consumption adjustment decreased more than in the first.

In the second quarter, profits from the rest of the world accounted for the increase in profits before tax. Before-tax profits from domestic operations changed little, as a small increase in financial corporations was offset by a small decrease in nonfinancial corporations. After-tax profits of domestic corporations also changed little, as dividends increased \$3.1 billion and undistributed profits decreased \$3.6 billion. On a current-production basis, after-tax profits of domestic corporations increased \$7.4 billion; the current-production measure includes the inventory valuation and capital consumption adjustments. 

## NATIONAL INCOME AND PRODUCT ACCOUNTS

## Selected NIPA Tables

New estimates in this issue: "Final" estimates for the second quarter of 1995.

The selected set of NIPA tables shown in this section presents quarterly estimates, which are updated monthly. (In most tables, the annual estimates are also shown.) These tables are available on the day of the gross domestic product (GDP) news release on printouts and diskettes on a subscription basis or from the Commerce Department's Economic Bulletin Board. For order information, write to the National Income and Wealth Division (BE-54), Bureau of Economic Analysis, Washington, DC 20230 or call (202) 606-9700.

Tables containing the estimates for 1929-87 are available in the two-volume set *National Income and Product Accounts of the United States*; see [inside back cover](#) for order information. For 1988-93, the complete official time series of NIPA estimates can be found as follows:

	1988	1989	1990	1991-93

Tables 7.4-7.12.....	Apr. 1993 SURVEY	Apr. 1993 SURVEY	Aug. 1993 SURVEY	July 1994 SURVEY

Summary NIPA series back to 1929 are in the September 1994 issue of the SURVEY. Errata to published NIPA tables appear in the September 1992, April 1993, October 1993, March 1994, November 1994, and April 1995 issues. NIPA tables are also available, most beginning with 1929, on diskettes. For more information on the presentation of the estimates, see ["A Look at How BEA Presents the NIPA'S"](#) in the February 1995 SURVEY.

NOTE.—This section of the SURVEY is prepared by the National Income and Wealth Division and the Government Division.

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in business inventories (CBI) component of GDP. The former is the difference between two inventory stocks, each valued at their respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas CBI is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross product of households and institutions and general government and includes a small amount of final sales by farm.

1. Inventories are as of the end of the quarter. Quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the constant-dollar change in business inventories component of GDP is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross product of households and institutions and general government and includes a small amount of final sales by farm.

6. Income, Employment, and Product by Industry

1. Equals GDP less change in business inventories.

2. Equals GDP less net exports of goods and services or equals the sum of personal consumption expenditures, gross private domestic investment, and government purchases.

3. Equals gross domestic purchases less change in business inventories or equals the sum of personal consumption expenditures, gross private domestic fixed investment, and government purchases.

NOTE.—Percent changes from preceding period for selected items in this table are shown in table 8.1.

NOTE.—The quantity and price indexes in this table are calculated from weighted averages of the detailed output and prices used to prepare each aggregate and component. The fixed-weighted measures use as weights the composition of output in 1987. For the alternative indexes, the chain-type indexes with annual weights use weights for the preceding and current years, and the indexes with benchmark-years weights use weights of 1959, 1963, 1967, 1972, 1977, 1982, 1987, 1992, and the most recent year. Percent changes from preceding period for selected items in this table are shown in table 8.1.

NOTE.—Except for disposable personal income, the quantity and price indexes in this table are calculated from weighted averages of the detailed output and prices used to prepare each aggregate and component. The fixed-weighted measures use as weights the composition of output in 1987. For the alternative indexes, the chain-type indexes with annual weights use weights for the preceding and current years, and the indexes with benchmark-years weights use weights of 1959, 1963, 1967, 1972, 1977, 1982, 1987, 1992, and the most recent year.

# SELECTED SERIES: RECENT QUARTERS

Percent change

Percent change

Percent change

Billion \$

Percent change

Percent

1. Percent change at annual rate from preceding quarter; based on seasonally adjusted estimates.  
 2. Seasonally adjusted annual rate; IVA is inventory valuation adjustment, and CCAadj is capital consumption adjustment.  
 3. Personal saving as percentage of disposable personal income; based on seasonally adjusted estimates.

1. Reflects adjustments necessary to bring the Census Bureau's component data in line with the concepts and

# Constant-Dollar Inventories, Sales, and Inventory-Sales Ratios for Manufacturing and Trade

Tables 1, 2, and 3 present quarterly and monthly constant-dollar inventories, sales, and inventory-sales ratios, respectively. Table 4 presents quarterly fixed-weighted constant-dollar inventory-sales ratios—that

is, ratios obtained by weighting detailed industry ratios by 1987 sales. Table 5 presents quarterly and monthly inventories for manufacturing by stage of fabrication.

<sup>r</sup> Revised.  
<sup>p</sup> Preliminary.  
 1. Includes lumber and wood products; furniture and fixtures; stone, clay, and glass products; instruments and related products; and miscellaneous manufacturing industries.

2. Includes tobacco manufacturers; textile mill products; apparel products; printing and publishing; and leather and leather products.

NOTE.—Manufacturing inventories are classified by the type of product produced by the establishment holding the inventory. Trade inventories are classified by the type of product sold by the establishment holding the inventory.

### Data Availability

Quarterly constant-dollar estimates for manufacturing and trade inventories, sales, and inventory-sales ratios for 1977–89 were published in the January 1993 SURVEY OF CURRENT BUSINESS; estimates for 1990 were published in the September 1993 SURVEY; and estimates for 1991–94 were published in the September 1994 SURVEY. Quarterly and monthly constant-dollar estimates for 1967–94, as well as constant-dollar manufacturing inventories by stage of fabrication, are available on printouts and diskettes. To order, write to the National Income and Wealth Division, BE-54, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230. Specify Constant-Dollar Manufacturing and Trade Inventories, Sales, and Ratios (Accession No. BEA 54-90-21-205 for printouts or BEA 54-91-40-409 for diskette), and include a check or money order for \$55.00 for printout or \$20.00 for diskette, payable to the Bureau of Economic Analysis. To order by telephone, call (202) 606-9700; MasterCard and VISA are accepted.

## BEA Customer Satisfaction Report

THIS REPORT SUMMARIZES BEA's efforts over the past year to improve both the quality and relevance of our products and the service to our customers.

From late 1994 through mid-1995, BEA involved its staff and customers in a Mid-Decade Strategic Review of the Economic Accounts:

- Background papers that discussed the issues involved in keeping the economic accounts useful and viable into the next century were prepared by BEA staff and widely distributed to customers of BEA data in business, academia, and government.
- A draft strategic plan for improving the accounts, based on the background papers, was published in the *SURVEY OF CURRENT BUSINESS*, BEA's monthly journal of record. Comments and suggestions from our customers were solicited.
- In March 1995, a users conference—cosponsored by the U.S. Chamber of Commerce—was held to publicly discuss the issues and BEA's plan for addressing these issues. BEA revised its strategic plan in response to input from our customers and published the revised plan in the *SURVEY*.

In addition, BEA completed several efforts to enhance service to our customers:

- BEA began providing access to our information on the Internet. With a subscription through *STAT-USA*, for a nominal fee, users can obtain BEA news releases; detailed data from BEA's national, regional, and international accounts; and recent issues and back articles from the *SURVEY*. In addition, BEA's Internet home page contains free material about BEA, including the User's Guide to BEA Information.
- BEA released a CD-ROM containing the monthly issues of the *SURVEY* for 1994 and selected articles for 1987-93. The format preserves the look and feel of the printed version and provides the ability to conduct cross-document searches and to copy data tables directly into spreadsheet software.
- BEA provided additional customer service training for our staff and completed a thorough review

of its order-processing operation. Recommendations from this review, including enhanced computer tracking of customers' orders, will be implemented in the coming year.

In March 1995, the Census Bureau conducted a Customer Satisfaction Survey for Department of Commerce operating units, including BEA. Results for BEA are highlighted below:

- BEA's customers are satisfied with our products and services. Over 87 percent of the respondents gave BEA's information services and data products a rating in the highest two categories for overall satisfaction, resulting in a mean score of 4.1 on a 5-point scale. As the private sector is the largest single source of BEA customers—over 80 percent—BEA is proud of earning this high ranking by the business world.
- BEA customers' expectations are satisfied in those aspects of information services and data product use that the customer rates as highly important. In an era of scarce resources, this result indicates that BEA is spending its resources wisely in order to have the greatest impact on customer satisfaction.
- BEA's highest score—4.3—was in "Quality of Information or Data," the area ranked most important by BEA customers. This result again indicates that staff efforts are well-directed at doing best what customers deem critical.

As always, we welcome your comments. If you have a problem with our products or services or if you wish to make a suggestion, please contact our Public Information Office:

Public Information Office, BE-53  
 Bureau of Economic Analysis  
 U.S. Department of Commerce  
 Washington, DC 20230  
 Voice: (202) 606-9900  
 FAX: (202) 606-5310  
 Internet: <http://www.doc.gov/resources/beahome.html>

### BEA's Customer Service Standards

1. BEA staff will respond to customer correspondence within 5 business days.
2. BEA staff will return customer phone calls within 1 business day.
3. BEA will ship off-the-shelf products within 3 business days.
4. BEA will meet its published annual calendar of news release dates. Any changes in these dates will be announced as far in advance as possible.
5. BEA will provide access to news releases on the EBB, EBB FAX, and recorded telephone messages at the time of release.

# Preview of the Comprehensive Revision of the National Income and Product Accounts: Recognition of Government Investment and Incorporation of a New Methodology for Calculating Depreciation

*As previously announced, BEA plans to release the results of its next comprehensive, or benchmark, revision of the national income and product accounts (NIPA's) at the end of 1995. (See the box "Revised News Release Schedule for NIPA Estimates" on page 34.) Comprehensive NIPA revisions differ from annual NIPA revisions because of the scope of the changes incorporated and because of the number of years subject to revision. This year's comprehensive revision will include the elements of the annual revision covering 1992-94, which would usually have been released in July.*

*Major improvements that will be incorporated in this comprehensive revision include the following: The introduction of new featured measures of real output and prices, the treatment of government purchases of structures and equipment as investment, and the implementation of an improved empirical basis for the estimates of depreciation. The first improvement was discussed in an article in the July 1995 SURVEY OF CURRENT BUSINESS. This article discusses the other two improvements.*

*The revised estimates will also reflect other definitional and statistical changes. Most important will be the incorporation of newly available source data—such as the 1987 benchmark input-output tables, data from the 1992 Economic Censuses, and several annual surveys for 1993 and 1994—and of improved estimating methodologies. In addition, the NIPA tables will be redesigned to reflect the definitional, classificational, and statistical changes that are incorporated in the comprehensive revision; an article previewing the new tables will appear in the October 1995 issue of the SURVEY.*

Robert P. Parker, assisted by David T. Dobbs and John S. Pitzer, wrote the section on government investment. Jack E. Triplett, assisted by Shelby A. Herman, wrote the section on depreciation.

ONE ASPECT of the upcoming comprehensive NIPA revision will be the incorporation of two major changes that will improve the measurement of investment and saving in the U.S. economy. The first change provides the NIPA's with a more comprehensive and consistent treatment of gross investment by recognizing government expenditures for equipment and structures as investment. The second improves the NIPA estimates of net investment and net saving by introducing an empirically based methodology for estimating depreciation.

As proposed in BEA's Mid-Decade Review of the economic accounts, these changes represent continuing efforts by BEA to improve its estimates of investment and related capital stocks.<sup>1</sup> A broader definition of investment may be quite

helpful in understanding the sources of economic growth and the returns to, and adequacy of, various types of public and private investment. Specifically, the recognition of government investment will accomplish the following:

- Provide for a more complete measure of investment through the consistent treatment of fixed assets whether purchased by the public or the private sector.
- Record the depreciation of public investment in fixed assets over the service lives of these assets symmetrically with the depreciation of private assets.
- Enable users to track changes in the composition of government spending between consumption and investment to assess the impact of these changes on economic growth and productivity.
- Facilitate comparisons of estimates of U.S. national saving and investment rates with those of most other countries.

1. For information about the Mid-Decade Review, see "Mid-Decade Strategic Review of BEA's Economic Accounts: Maintaining and Improving Their Performance," SURVEY OF CURRENT BUSINESS 75 (February 1995): 36-66, and "Mid-Decade Strategic Review of BEA's Economic Accounts: An Update," SURVEY 75 (April 1995): 48-56.

The improved estimates of depreciation will put BEA's estimates of depreciation on a firmer empirical foundation.

### Recognition of Government Investment

Implementation of the recognition of government investment in the NIPA's has three major elements:

- Government expenditures for structures and equipment (such as highways, schools, motor vehicles, and computers), which are now included in the "government purchases" component of gross domestic product (GDP), will be reclassified as investment and shown as a new GDP component, "gross government investment."<sup>2</sup>
- The services of government fixed assets, to be measured using depreciation, will be added to "government consumption expenditures," a new GDP component that will replace "government purchases."<sup>3</sup>
- Depreciation on government fixed assets will be added to the "consumption of fixed cap-

2. Titles used in this article are preliminary; an article in the October 1995 SURVEY on presentational changes will provide final titles and table changes.

3. Use of depreciation as a measure of the value of services of government fixed assets is a partial measure of the total value. In theory, the service value of an asset should equal the reduction in the value of the asset due to its use during the current period (depreciation) plus a return equal to the current value the asset could earn if invested elsewhere (net return). For a comprehensive discussion of depreciation, capital services, and differences between these measures, see Jack E. Triplett, "Measuring Capital Stock: A Review of Concepts and Data Needs," paper presented at the Workshop on the Measurement of Depreciation and Capital Stock of the Conference on Research in Income and Wealth, National Bureau of Economic Research, Washington DC, June 1992.

### Revised News Release Schedule for NIPA Estimates

In response to user requests for an earlier release date for the comprehensive, or benchmark, revision of the NIPA's, BEA will release revised NIPA estimates for 1959-92 on November 21, 1995. Revised estimates for 1993 through the second quarter of 1995 will be released on December 15. These release dates necessitate the following changes to the previously announced release dates for NIPA estimates:

- *Gross Domestic Product and Corporate Profits, Third Quarter 1995 (Preliminary)*. Previously scheduled for December 1, this release will be delayed until December 15 and will be combined with the release of the revised estimates for 1993 through the second quarter of 1995.
- *Gross Domestic Product and Corporate Profits, Third Quarter 1995 (Final)*. Previously scheduled for December 22, this release will be combined with the regular release of the advance estimate of GDP for the fourth quarter of 1995 in late January of 1996.
- *Personal Income and Outlays, October 1995 and November 1995*. Previously scheduled for December 4 and December 26, respectively, these releases will be combined into a single release on December 21.

ital" component to spread the cost of government investment over the assets' service lives.

The rest of this section of the article describes the present NIPA definition and treatment of investment, discusses the reasons for the change in definition, shows the effects of the change on the accounts, and provides details on the implementation of the change.

### Current NIPA definition of investment

Gross investment in the NIPA's is the sum of "gross private domestic investment" and "net foreign investment." Gross private domestic investment currently is defined both by type of commodity and by type of purchaser. Investment consists of purchases of fixed assets, which are commodities that will be used in a production process for more than 1 year, and the change in inventories, which consist of goods purchased for use in the production of other commodities or for resale. Fixed assets and inventories are included in investment if they are purchased by private businesses, nonprofit institutions serving individuals, or individuals in their role as owner-occupants of residential dwellings. In the presentation of the NIPA's, "gross private domestic investment" is the investment component of GDP.

Because fixed assets are used in production for more than 1 year, they are treated as a final expenditure and included in GDP. The current charge for their use in production—depreciation, or consumption of fixed capital (CFC) in the NIPA's—is included in gross national income. CFC is subtracted from GDP to estimate net domestic product, and it is included as a deduction in calculating certain factor incomes. In the calculation of gross saving, CFC is added to the undistributed income of the owning business.

Government purchases of fixed assets and inventories, however, are not currently defined as investment. The current NIPA treatment is described as follows in the BEA methodology paper on government transactions:<sup>4</sup>

In the NIPA's, there is no capital accounting for government. All goods and services purchased by government are treated in the same way—that is, as if consumed in the period in which purchased. Government purchases, therefore, make no distinction between consumption and investment; structures and durable goods purchased by

4. U.S. Department of Commerce, Bureau of Economic Analysis, *Government Transactions*, Methodology Paper Series MP-5 (Washington, DC: U.S. Government Printing Office, 1988): 5.

government, which would be classified as investment if purchased by business, are recorded on current account. No charges for the use of capital are recorded in the government production account..

The current NIPA treatment of government expenditures for equipment and structures as current-account purchases results in the omission from the NIPA measure of investment of fixed assets purchased by government that are, in general, identical to those purchased by private firms, such as office buildings and motor vehicles. It also results in an understatement of government saving. This treatment was adopted because of the lack of a reliable measure of the value of the services of government-owned fixed assets and the lack of comprehensive information on service lives and on price indexes for government-owned structures and equipment.<sup>5</sup> As a result, the NIPA's do not recognize the multiyear service lives of government assets, such as highways and schools. Because government expenditures for equipment and structures are classified as current-account purchases, the value of the services these assets provide is assumed to equal the entire cost of the assets, and no charge for using up these assets is included in the value of government output, which is defined as the cost of production.

The services of owned fixed assets can be measured either directly or indirectly.<sup>6</sup> For private firms, there is no need to estimate the value of these services directly, because these firms sell their output for a market price, and their income, which includes the value of these services, is determined as output less expenses incurred in production. The same approach is now used in the NIPA's for those government agencies, known as "government enterprises," that cover a substantial proportion of their operating costs by selling goods and services to the public.<sup>7</sup>

This "indirect" approach cannot be used for firms whose output is not sold for a market price, as is the case for the other types of purchasers included in the current NIPA definition of investment—owner-occupants of residential dwellings and nonprofit institutions serving

individuals—or for "general government"—that is, government agencies other than government enterprises. For owner-occupants of residential dwellings, the services of their fixed assets are imputed based on the amounts that owner-occupants would pay if they rented their dwellings instead of owning them; these amounts are estimated using data from equivalent rental housing.<sup>8</sup> This approach was not used to estimate the services of government fixed assets, because such market-based rental equivalents are available only for certain types of assets, such as office buildings and motor vehicles.

For nonprofit institutions serving individuals, the services also are imputed, but with a different methodology. The services of the fixed assets of these institutions are measured as the sum of CFC and an estimate of a net rate of return, assumed to equal the net interest paid by these institutions.<sup>9</sup> This approach was not used for government agencies, because there is insufficient empirical information with which to select a rate of return.

As previously stated, depreciation—the CFC—is recorded in the NIPA's as a component of gross national income. The difference between the services provided by fixed assets and the CFC, or the net return, is recorded as part of certain other incomes.

### *Reasons for the change in definition*

With the change in definition, government investment will be shown as a separate component of GDP and included in the calculation of gross investment. In addition, the services provided by general government fixed assets, measured as depreciation, will be recorded as a current-account purchase, and depreciation on all government fixed assets will be added to the CFC component of gross national income. Depreciation on fixed assets of government enterprises will be recorded as a subtraction in the calculation of their net income.

As noted earlier, the current NIPA treatment of government expenditures for equipment and structures as current-account purchases results in an understatement of gross investment and saving and the omission of the "cost" of these assets over their service lives. With the new treatment, all government purchases of fixed assets

5. Because of user interest, BEA has been preparing estimates of government investment and CFC as part of its estimates of capital stock. The most recent estimates and a description of the methodology used to prepare them appears in U.S. Department of Commerce, Bureau of Economic Analysis, *Fixed Reproducible Tangible Wealth in the United States, 1925-89* (Washington, DC: U.S. Government Printing Office, January 1993). The estimates of capital stock are updated annually and published in the SURVEY.

6. Services of rented fixed assets are measured by rental payments, which are classified as current-account purchases in the NIPA's.

7. Another effect of the recognition of government investment will be to subtract depreciation in the calculation of the net income of government enterprises. For a detailed discussion of the current NIPA treatment of government enterprises, see *Government Transactions*, 6-8.

8. A description of this imputation appears in U.S. Department of Commerce, Bureau of Economic Analysis, *Personal Consumption Expenditures, Methodology Paper Series MP-6* (Washington, DC: U.S. Government Printing Office, 1990): 8.

9. See *Personal Consumption Expenditures*, 8.

will be defined as investment and treated in a manner similar to the treatment of private investment now included in the NIPA's.<sup>10</sup> Based on the estimates of government investment and CFC published in *Fixed Reproducible Tangible Wealth* (see footnote 5), the new treatment would raise both the share of GDP accounted for by gross investment and the national saving rate by about 3 percentage points.

The new treatment, however, will still not provide an estimate of the full value of the services of general government fixed assets. These services, which will be recorded as a current-account purchase, will be measured using the convention that these services equal the estimate of general government CFC; that is, the net rate of return on general government fixed assets will be assumed to be zero. A similar estimate for the services of fixed assets of government enterprises will not be necessary because their income, the current surplus of government enterprises, is calculated using the market value of their output. However, this income will be affected by the subtraction of a government enterprise CFC.

The decision to recognize government investment primarily reflects a consensus among economists that measures of investment and saving in the U.S. national economic accounts will be significantly improved by the inclusion of government investment and by the use of depreciation as the value of the services of fixed assets. These improvements more than outweigh the potential mismeasurement of the value of these services that arises from the use of a zero rate of return.<sup>11</sup> The change will result in a more comprehensive estimate of total investment activity. For example, total investment will include purchases of all office buildings, regardless of ownership, thereby recognizing that an office building owned by government contributes to the Nation's production in the same way as an office building owned by a private business. Including the government's purchases of buildings in investment also will make GDP and total investment invariant to a government's choice between owning or renting an office building. Estimates of government saving based on the new treatment also will be improved because, like the current NIPA measures of business incomes, they

will no longer include purchases of structures and equipment as current-account purchases.

The recognition of government investment and the use of CFC to measure the services of general government fixed assets also will make the U.S. economic accounts more comparable with those of most other nations. However, there will be a difference in the treatment of purchases of military equipment: In the NIPA's, this equipment will be classified as investment; other countries treat this equipment as a current-account purchase.<sup>12</sup>

### Effects of the change

The effects that the recognition of government investment will have on the NIPA's and its major components can be illustrated using the summary accounts that are the framework for the NIPA's.<sup>13</sup> Table 1 presents revised versions of the three NIPA summary accounts that are affected. (The personal income and outlay account, account 2, and the foreign transactions account, account 4, will not be affected.) The dollar entries in table 1 reflect the effects that result from the recognition as investment of \$100 of government expenditures for fixed assets and \$90 of government CFC, illustrated as follows:

Gross government investment.....	100
General government.....	95
Government enterprises.....	5
Services of general government fixed assets <sup>1</sup> .....	75
Government consumption of fixed capital.....	90
General government.....	75
Government enterprises.....	15

1. As previously discussed, the value of these services will be measured using general government CFC, which assumes that the net return on general government fixed assets is zero.

In the national income and product account (account 1), both the product, or expenditure, and income sides will be affected. The expenditure side will have several new components: "Gross government investment," which will consist of total government expenditures for fixed assets; "government consumption expenditures," which will replace the "government purchases"

12. Except for the treatment of military equipment, the new NIPA treatment also is more consistent with the newest set of international economic accounting guidelines. See Commission of the European Communities, International Monetary Fund, Organisation for Economic Co-operation and Development, United Nations, and World Bank, *System of National Accounts 1993* (Brussels/Luxembourg, New York, Paris, and Washington, DC, 1993).

13. The five-account summary tables and the definitions of each entry appear in U.S. Department of Commerce, Bureau of Economic Analysis, *National Income and Product Accounts of the United States: Volume 2, 1959-88* (Washington, DC: U.S. Government Printing Office, 1992): M-5-M-9. A more detailed discussion of the framework appears in U.S. Department of Commerce, Bureau of Economic Analysis, *An Introduction to National Economic Accounting*, Methodology Paper Series MP-1 (Washington, DC: U.S. Government Printing Office, 1985): 10-12.

10. The treatment of inventory investment by government will not be changed, because insufficient source data are available to prepare such estimates. As a result, the change in government inventories will continue to be treated as a current-account purchase.

11. For a recent discussion of these issues, see "Mid-Decade Strategic Review of BEA's Economic Accounts: Maintaining and Improving Their Performance" and "Mid-Decade Strategic Review of BEA's Economic Accounts: An Update."

component and will include the estimated value of the services of general government fixed assets, measured by CFC; and “government consumption and investment expenditures,” which will show the total contribution of government to GDP. Using the numbers in the example, purchases of fixed assets of 100 are reclassified from consumption to investment, and 75 is added to consumption. Thus, GDP will be increased by 75—the amount of the services of general government fixed assets.

On the income side, CFC will be increased by total government CFC (90), and the surplus of government enterprises will be reduced by 15 because CFC will be deducted as an expense in the calculation of that surplus. These two effects combined increase gross national income and product by 75, the same as the increase to GDP. (The effect on gross domestic income, the income-side equivalent to GDP, will be the same. This aggregate, which is not shown separately in summary account 1, is equal to gross national in-

come less net receipts of factor income from the rest of the world.)

For summary account 3, the title will be changed to “government receipts and current expenditures account” because government investment will no longer be a current-account purchase. As in account 1, “government consumption expenditures,” which will consist of only current-account purchases, will replace “government purchases” as an expenditure component, and “current expenditures” will replace “expenditures.” Using the example, consumption expenditures will decrease by 25, and government enterprise CFC (15) will be entered as an expense in the calculation of the current surplus of government enterprises. As discussed earlier, government investment (100 in the example) will no longer be included in current expenditures. Thus, government current expenditures will decrease by 10 (15 - 25), and the government current surplus will increase by the same amount.

<b>GROSS INVESTMENT</b> .....	100 Gross government investment

CFC Consumption of fixed capital

For summary account 5, the recognition of government investment will add the “gross government investment” component to the investment side of the account. Using the example, both gross investment and gross saving will be increased by 100. The increase in gross saving will reflect the addition of total government CFC (90) and the increase in the government current surplus (10).

### Implementation

*Investment.*—As previously noted, gross government investment will consist only of fixed assets; inventory estimates will not be included because of a lack of adequate source data. Government fixed assets will include the same types of assets that are now defined as fixed investment when purchased by a private business. In addition, purchases of military equipment and structures will be defined as fixed investment because they can be viewed as being used in the production of national security throughout their useful lives, even though equipment such as missiles can ultimately be used only once, if ever.

The estimates of government fixed investment to be incorporated in the comprehensive revision are considerably improved from the corresponding estimates used to prepare BEA’s current data on government capital stock. For all levels of government, they are prepared using detailed breakdowns of equipment that better match the detail used for private businesses. Federal Government investment estimates for years prior to 1972 are improved by removing parts and other current-account purchases. Estimates related to sales and transfers of government equipment also are improved; in particular, military equipment purchased for in-kind military assistance programs will be excluded from U.S. investment. Overseas construction of military facilities and embassies will be included in investment for all years; construction prior to 1972 had been omitted. For all levels of government, the allocation of investment between general government and government enterprises is improved.

*Consumption of fixed capital.*—The new estimates of government CFC will be calculated using the improved methodology that is being introduced for private CFC, as described in the second section of this article. This methodology will incorporate the improved government investment data described earlier, and depreciation patterns that usually will be the same as those used for corresponding assets owned by private businesses.

For some Federal Government equipment, primarily military equipment, depreciation patterns will be based on service lives estimated from U.S. Department of Defense data.

For unusual destruction of fixed assets, which in the NIPA’s is limited to destruction from earthquakes and other natural disasters, the CFC for government enterprises will include the value of destroyed assets, as does the CFC for private businesses in the current NIPA’s.<sup>14</sup> (“Normal” levels of accidental destruction of fixed assets are reflected in the depreciation patterns used to calculate CFC.) For the new general government CFC estimates, there will be no adjustments for destruction that is due to natural disasters or to wartime losses.<sup>15</sup>

The new methodology for estimating government CFC will result in estimates that differ from those currently used for BEA’s estimates of capital stock. These differences will primarily reflect the new methodology for depreciation, improved estimates of investment and service lives, and the treatment of wartime losses. In the currently published capital stock series, service lives for military equipment were greatly reduced in wartime, thus increasing the CFC for those periods.

### New Methodology for Calculating Depreciation

In the national income and product accounts (NIPA’s), consumption of fixed capital (CFC), also called “depreciation,” is subtracted from gross domestic product (GDP) and from certain other income estimates to adjust for the loss in value of structures and equipment during an accounting period. For example, GDP less CFC equals net domestic product.<sup>16</sup>

As part of the upcoming comprehensive NIPA revision, BEA will change its methodology for calculating CFC. This change will put BEA’s estimates of depreciation on a firmer empirical foundation. The following paragraphs explain the current

14. For a discussion of the NIPA treatment of unusual destruction of fixed assets, see the September 1992 SURVEY, page 2.

15. Although general government CFC will not reflect the value of unusual destruction in the period the destruction occurs, the net stock of general government fixed assets used to calculate CFC in future periods will be reduced by these losses.

16. The CFC also is directly related to two other NIPA components—capital consumption allowances (CCA) and the capital consumption adjustment (CCAdj). The CCA is sometimes called “book value” depreciation because it is mainly based on depreciation charges reported on Federal income tax returns and is based on historical cost. The CCAdj is calculated as the difference between CCA and CFC; it can be viewed as converting the CCA from the values reported on the tax returns to the CFC, which is the measure used in the NIPA’s. In addition, the CFC is also used by BEA to estimate the current-cost net stock of fixed reproducible assets.

method for calculating the CFC, the new method, and the reasons for the change. A more detailed description of BEA's new methodology will be published next year.

### *Current methodology*

The current methodology for estimating depreciation was one of the major features of the comprehensive NIPA revision released in January 1976. Previously, the NIPA estimates were based primarily on depreciation as reported on Federal income tax returns. The 1976 methodology overcame two major shortcomings in the previous estimates: First, they were based on current replacement cost, rather than historical cost; and second, they incorporated consistent service lives and straight-line depreciation patterns, rather than the sometimes inconsistent data reported for tax purposes.<sup>17</sup>

The estimates first released in 1976, and those now used for the NIPAs, are based on investment flows for an asset within an industry. Currently, each year's investment for about 50 types of assets for about 60 industries is divided into pieces, or "cohorts," representing the retirement pattern around each asset's average service life.

A straight-line depreciation pattern, which assumes that an equal amount of an asset's value is lost each year until the asset is retired, is applied to each cohort of investment flows in each period. For example, an asset with an average service life of 10 years is divided into 12 cohorts, the first of which has an assumed 5-year lifespan, and the last a 16-year lifespan.<sup>18</sup> The first cohort is depreciated using a 5-year life, the second using a 6-year life, and so forth until the last cohort, which uses a 16-year life.<sup>19</sup> Because each year of investment is divided into cohorts with its own service life, NIPA depreciation tends to be more accelerated at the beginning of the life of the investment than it would be if the straight-line pattern were applied to the average service life for the entire investment.

These calculations are first performed using constant-dollar investment flows and thus yield constant-dollar CFC. Current-dollar CFC, which is valued at replacement cost, is then calculated for a period as the sum of the products of the

constant-dollar CFC by type of asset and the corresponding investment price index.

### *Shortcomings in the current methodology*

In the current methodology, three blocks of empirical information and assumptions are employed.

First, information is required on average service lives of different types of investment in equipment and structures. A variety of empirical estimates of services lives are available, much of the information dating from the 1970's and 1980's. As new information becomes available, these service lives are routinely updated in BEA's estimates.

Second, because service lives are only averages for a particular kind of asset (for example, machine tools or electrical utility plants), the current BEA methodology makes use of retirement patterns around the average service life for each type of asset. As explained earlier, these patterns are used to create cohorts for each type of equipment and structure by industry.

Finally, the age profile, or shape, of the depreciation pattern for each cohort of each asset is assumed in current BEA methodology to be a straight line. A straight-line depreciation pattern means that an equipment cohort that, for example, has a 10-year service life is assumed to lose one-tenth of its *initial* value each year until it is retired.

The current BEA methodology has two major shortcomings. First, it uses a depreciation pattern that is assumed, rather than one that is based on empirical evidence. Second, it relies on retirement patterns that are very old.

### *New methodology*

The new BEA methodology reflects the results of studies on the prices of used equipment and structures in resale markets, which have shown that depreciation for most kinds of structures and equipment does not follow a straight-line pattern. For example, suppose a particular kind of construction equipment was produced during 1987-92, and suppose that some of it is offered for resale, perhaps at auction markets, in 1993. The used machines produced in the various years differ in 1993 only because of the normal wear and tear that characterizes increasingly older pieces of equipment. Thus, the price differences in 1993 across these used machines indicate the 1993 profile of annual depreciation for the machines—the difference in value between a 1992 machine and

17. For more information, see Allan H. Young, "New Estimates of Capital Consumption Allowances in the Benchmark Revision of GNP," *SURVEY* 55 (October 1975): 14-16.

18. For information on the average service lives, see *Fixed Reproducible Tangible Wealth in the United States, 1925-89*, pp. M-16-M-18; for retirement patterns, see *Fixed Reproducible Tangible Wealth*, M-18-M-19.

19. In the first year of an asset's life, it is assumed that only half the value is subject to depreciation. Thus, depreciation on each asset is actually calculated for 1 year more than the service life of the asset.

a 1991 machine, of a 1991 machine and a 1990 machine, and so forth.

Another example is provided by used-car price guides. Suppose a model of a particular automobile is relatively unchanged between 1990 and 1993 (that is, there is not much quality change in this model automobile between those years). In this case, a used-car price guide for 1993 could be used to estimate annual depreciation for new, 1-year-old, and 2-year-old cars in 1993.

Studies of used equipment prices have almost always found that equipment does not lose an equal dollar amount of its value each year, as implied by the straight-line assumption. Instead, the dollar amount lost in the first year is greater than that in the second year, which is in turn greater than that in the third year, and so on. For example, a new car typically loses much more of its value in its first year than the 1-year-old car loses in its second year, and so forth. Thus, rather than forming a straight-line depreciation pattern, the pattern of depreciation is curved, with greater dollar losses in the first years and lesser losses as the equipment gets older. In fact, it is more nearly true that equipment loses an equal *percentage* of its value each year, rather than losing an equal dollar amount. (The forthcoming report on the new methodology will review the empirical depreciation estimates and provide in more detail the basis for BEA's new estimates.)

Where current information on used equipment and structures prices makes possible an estimation of the depreciation profile for a particular type of equipment or structure, BEA will base its new capital consumption estimates on the actual empirical profiles. Where specific information is not available, BEA will assume that depreciation occurs at a constant percentage rate, rather

than assuming, as in the current methodology, straight-line depreciation. This rate, which reflects the depreciation patterns from empirical studies and average service lives, will be applied to the constant-dollar net stock of investment by type for each period, multiplied by the corresponding investment price index, and summed to yield current-dollar CFC.

BEA will not make use of service-life distributions of investment in its new methodology. For one reason, the empirical depreciation profiles that have been estimated are average profiles for each equipment type, rather than cohort profiles. For another, the available information on service life distributions is very old.<sup>20</sup>

### *Effect of the change*

How much difference will the change make to the NIPA estimates? The recalculation of CFC has not yet been completed, so a quantitative answer cannot yet be given. There are reasons, however, for believing that the aggregate effects may not be large. As BEA now uses straight-line depreciation, it is applied to cohorts within each equipment and structure type and reflects retirement patterns around the average service life, as noted earlier. Consequently, NIPA depreciation for each equipment and structure type is not straight-line. Rather, it cumulates to a depreciation profile that has some curvature, and this curvature tends to have the same general shape as the profiles estimated from actual empirical data. 

20. The literature on the measurement of depreciation is replete with conceptual and empirical controversies. For a review of these issues, see Jack E. Triplett, "Measuring the Capital Stock: A Review of Concepts and Data Needs."

# U.S. International Transactions, Second Quarter 1995

By Lori A. Trawinski

**T**HE U.S. current-account deficit increased to \$43.6 billion in the second quarter from \$39.0 billion (revised) in the first (table A).<sup>1</sup> The deficits on goods and services and on investment income both increased, and net unilateral transfers decreased.

In the capital account, net recorded capital inflows were \$39.1 billion in the second quarter, compared with \$19.5 billion in the first. Acquisitions of U.S. assets by foreign residents accelerated sharply, particularly acquisitions of foreign official assets. Acquisitions of foreign assets by U.S. residents remained strong and increased by nearly the same amount as in the first quarter.

The statistical discrepancy—errors and omissions in recorded transactions—was an inflow of \$4.5 billion in the second quarter, compared with an inflow of \$19.5 billion in the first.

1. Quarterly estimates of U.S. current- and capital-account components are seasonally adjusted when statistically significant seasonal patterns are present. The accompanying tables present both adjusted and unadjusted estimates.

## U.S. dollar in exchange markets

Following sharp depreciation in the first quarter, the dollar continued to fall in April, partly in response to a slowdown in U.S. economic growth; for the remainder of the quarter, the dollar was relatively stable. When measured on a trade-weighted quarterly average basis, the U.S. dollar depreciated 5 percent against the currencies of 10 industrial countries and 4 percent against the currencies of 22 OECD countries plus 4 newly industrialized countries in Asia (table B, chart 1).

On a quarterly average basis, the dollar depreciated 12 percent against the Japanese yen and 5 percent against the German mark. U.S. and foreign monetary authorities intervened against both currencies in early April; following these operations, the dollar continued to decline and fell to a new historical low against the yen. In an attempt to restrain the yen's appreciation, the Bank of Japan cut its official discount rate 75 basis points and unveiled an emergency economic plan. The dollar rallied against both the mark

<sup>r</sup> Revised.

<sup>p</sup> Preliminary.

and the yen in mid-May; subsequently, the dollar fell sharply, and U.S. and foreign monetary authorities intervened again against both currencies at the end of May. During June, the dollar traded within a narrow range against the yen, the mark, and other European currencies.

The dollar depreciated 3 percent against the Canadian dollar in the second quarter. The Canadian dollar was buoyed by a rally in Canadian financial markets.

Dollar appreciation against the Mexican peso slowed significantly to 2 percent in the second quarter, largely reflecting stabilization of Mexican financial markets. The peso steadied for the first

time since the December 1994 devaluation, as the Mexican economy showed signs of improvement, the Mexican stock market rallied, and interest rates fell sharply.

Against the currencies of the newly industrialized countries in Asia, the U.S. dollar depreciated against both the Singapore dollar and South Korean won, declining 3 percent; it also depreciated 2 percent against the Taiwan dollar. The dollar was unchanged against the Hong Kong dollar.

### Current Account

#### Goods and services

The deficit on goods and services increased to \$33.4 billion in the second quarter from \$29.4 billion in the first. The merchandise trade deficit increased \$4.0 billion, while the surplus on services increased slightly.

**Merchandise trade.**—The merchandise trade deficit increased to \$49.0 billion in the second quarter from \$45.1 billion in the first. Import growth accelerated; export growth was unchanged from the previous quarter.

**Exports.**—Exports increased \$4.5 billion, or 3 percent, to \$142.5 billion in the second quarter. Volume, measured in constant (1987) dollars, increased 3 percent (table C). The current-dollar increase was more than accounted for by nonagricultural products.

Nonagricultural exports increased \$5.1 billion, or 4 percent, to \$129.1 billion; volume increased 3 percent. The current-dollar increase was largely attributable to a surge in capital goods—mostly civilian aircraft, semiconductors, telecommunications equipment, and electric generating machinery. Exports of these commodities to Western

Data: U.S. Department of the Treasury. End-of-month rates for months; averages of end-of-month rates for quarters.

2. Currencies of Belgium, Canada, France, Germany, Italy, Japan, Netherlands, Sweden, Switzerland, and United Kingdom. Data: Federal Reserve Board. Monthly and quarterly average rates. Index rebased by BEA.

3. Data: Federal Reserve Board. Monthly and quarterly average rates. Indexes prepared by BEA.

Europe and Asia were strong, reflecting an increase in demand that resulted from economic expansion in most European countries and continued growth in the developing countries of Asia. Nonagricultural industrial supplies and materials also increased, particularly paper and paper base stocks, nonmonetary gold, and other precious metals. Automotive products decreased sharply.

Agricultural exports decreased \$0.6 billion, or 4 percent, to \$13.5 billion after two consecutive record quarters; volume decreased 6 percent. The current-dollar decrease was mostly accounted for by a sharp decrease in cotton, which fell from an exceptionally high first-quarter level; wheat exports also fell. In contrast, soybeans and meat products increased.

**Imports.**—Imports increased \$8.5 billion, or 5 percent, to \$191.6 billion in the second quarter. Volume, measured in constant (1987) dollars, increased 4 percent (table C). Nonpetroleum imports accounted for four-fifths of the current-dollar increase; however, on a percentage-change basis, petroleum imports grew more rapidly than nonpetroleum imports.

Nonpetroleum imports increased \$7.0 billion, or 4 percent, to \$177.0 billion; volume increased 4 percent. Imports increased in most major commodity categories, led by capital goods and industrial supplies and materials; in contrast, automotive products decreased. Capital goods increased strongly, particularly semiconductors and computers, peripherals, and parts. Strength in machine tools, metalworking machinery, and other types of machinery reflected continued strong growth of durable equipment spending by U.S. manufacturers. Industrial supplies and materials were also up, mainly as a result of an increase in nonmonetary gold; paper and paper base products and chemicals continued to rise strongly. Consumer goods continued to increase, but at a slower pace than in recent

quarters; increases were strongest in household appliances and toys from China and in apparel from Latin America, China, and the newly industrialized countries in Asia. Automotive products decreased, partly as a result of production cutbacks in Canada that reflected slower vehicle sales in the U.S. market; partly offsetting this decrease were increases in vehicles from Japan and Germany.

Petroleum imports increased \$1.5 billion, or 11 percent, to \$14.6 billion. Sharply higher prices, coupled with higher volume, accounted for the increase. The average price per barrel increased to \$17.55 from \$16.01; the average number of barrels imported daily increased to 9.1 million from 8.9 million.

**Balances by area.**—The deficit with industrial countries increased to \$27.5 billion in the second quarter from \$24.8 billion in the first, reflecting larger deficits with many countries in Western Europe and with Japan. These increases were partly offset by a decrease in the deficit with Canada and by a shift to a surplus with the United Kingdom.

The deficit with Latin America increased to \$3.9 billion from \$3.5 billion, largely reflecting a slowdown in exports of capital goods and automotive products to Mexico. The deficit with developing countries in Asia and Africa increased to \$17.5 billion from \$16.1 billion; the deficit with China rose, as imports from China increased strongly.

**Services.**—The surplus on services increased slightly to \$15.7 billion in the second quarter from \$15.6 billion in the first. Service receipts increased to \$51.8 billion from \$51.1 billion; service payments increased to \$36.1 billion from \$35.5 billion.

Travel receipts totaled \$15.1 billion, down slightly from the first quarter. A decrease in overseas receipts was partly offset by increases in receipts from Canada and Mexico. Travel

<sup>r</sup> Revised.

<sup>p</sup> Preliminary.

payments increased to \$11.3 billion from \$11.1 billion, mostly reflecting a step-up in overseas payments.

Passenger fare receipts were unchanged at \$4.5 billion. Passenger fare payments increased to \$3.3 billion from \$3.2 billion.

“Other transportation” receipts increased to \$7.1 billion from \$6.9 billion; an increase in freight receipts more than offset a decrease in port expenditures. The step-up in freight receipts reflected increases in air, ocean, and truck freight as a result of rising export tonnages. “Other transportation” payments increased slightly to \$7.4 billion; an increase in port expenditure payments was partly offset by a decrease in ocean freight payments.

Receipts for “other private services” increased to \$21.3 billion from \$20.6 billion. Payments for “other private services” increased slightly to \$9.3 billion from \$9.2 billion.

Transfers under U.S. military agency sales contracts were unchanged at \$3.0 billion. U.S. direct defense expenditures abroad were also unchanged at \$2.5 billion.

### ***Investment income***

The deficit on investment income increased to \$2.9 billion in the second quarter from \$2.0 billion in the first. Income receipts on U.S. assets abroad continued to increase, but income payments on foreign assets in the United States increased more.

*Direct investment income.*—Income receipts on U.S. direct investment abroad increased to \$22.6 billion in the second quarter from \$21.4 billion in the first. The increase, which was widespread by area, reflected continued growth in earnings as a result of sustained economic expansion abroad. For Japan, higher earnings partly reflected appreciation of the yen, which raised the dollar value of affiliates’ earnings.

Income payments on foreign direct investment in the United States increased to \$7.7 billion from \$7.1 billion, reflecting an increase in earnings by affiliates in manufacturing and petroleum and, to a lesser extent, higher interest payments. Most of the increase in earnings was by U.S. affiliates of Western European parents; in contrast, earnings of Japanese banking affiliates decreased substantially.

*Portfolio investment income.*—Income receipts on other private investment abroad increased to \$21.3 billion in the second quarter from \$20.6 billion in the first. The increase was due to higher

U.S. bank claims on foreigners and increased U.S. holdings of foreign securities. Income payments on other private investment in the United States increased to \$25.4 billion from \$23.9 billion. Interest payments on bank liabilities and on foreign holdings of U.S. securities increased.

U.S. Government income receipts increased to \$1.4 billion from \$1.2 billion. U.S. Government income payments increased to \$15.1 billion from \$14.2 billion, reflecting an increase in foreign holdings of U.S. Treasury securities.

### ***Unilateral transfers***

Net unilateral transfers were \$7.4 billion in the second quarter, compared with \$7.6 billion in the first; the decrease was a result of lower U.S. Government grants.

### **Capital Account**

Net recorded capital inflows were \$39.1 billion in the second quarter, up from \$19.5 billion in the first. Acquisitions of U.S. assets by foreign residents accelerated sharply, particularly acquisitions of foreign official assets. Acquisitions of foreign assets by U.S. residents remained strong, increasing by nearly the same amount as in the first quarter.

Most international securities markets advanced in the second quarter, as continued growth in European economies and falling interest rates boosted securities prices (chart 2). In the United States, bond prices continued to rise as the slowdown in U.S. economic growth sparked expectations of lower interest rates. U.S. stock prices also continued to advance strongly, reflecting continued strength in corporate earnings and an increase in merger and acquisition activity. The U.S. dollar stabilized in exchange markets after some depreciation early in the quarter.

### ***U.S. assets abroad***

U.S. assets abroad increased \$75.1 billion in the second quarter, compared with an increase of \$75.3 billion in the first.

*U.S. official reserve assets.*—U.S. official reserve assets increased \$2.7 billion in the second quarter, following a \$5.3 billion increase in the first (table D). The second-quarter increase was more than accounted for by a \$5.0 billion increase in Mexican pesos that largely reflected U.S. credits to Mexico drawn under a medium-term swap facility. Partly offsetting the increase was a \$3.6 billion reduction in holdings of German marks and Japanese yen resulting from intervention sales in foreign exchange markets.

**Claims reported by banks.**—U.S. claims on foreigners reported by U.S. banks increased for the third consecutive quarter; claims increased \$35.5 billion in the second quarter, compared with an increase of \$29.3 billion in the first. Both

dollar- and foreign-currency-denominated claims increased in the second quarter.

Banks' own claims payable in dollars increased \$25.8 billion, following an increase of \$9.0 billion. Interbank claims increased \$14.1 billion, following an increase of \$2.9 billion. The second-quarter increase was more than accounted for by substantial lending by foreign-owned banks to their own offices in Caribbean banking centers; lending to related Japanese and other offices in Asia also increased. In contrast, U.S.-owned banks' claims on their own foreign offices decreased. Claims on "other private foreigners" increased \$12.3 billion, following a \$5.8 billion increase; the second-quarter increase reflected an acceleration in lending by U.S. securities dealers through resale agreements to investment funds in Caribbean banking centers.

Banks' domestic customers' claims payable in dollars increased \$3.6 billion, compared with an increase of \$8.3 billion; the slowdown was accounted for by a reduction in foreign commercial paper outstanding (held in custody by banks) after a strong increase in the first quarter.

Banks' own claims payable in foreign currencies increased \$4.7 billion, compared with an increase of \$12.8 billion. The second-quarter increase was mostly attributable to a rise in foreign currency claims on Western Europe; claims on Japan also increased.

**Foreign securities.**—Net U.S. purchases of foreign securities surged to \$20.6 billion in the second quarter from \$6.6 billion in the first, but they remained well below 1993's record level (chart 3). Net purchases of foreign stocks rebounded from a depressed first-quarter level; net purchases of foreign bonds surged.

Net U.S. purchases of foreign stocks rebounded to \$8.9 billion from \$3.2 billion, as European

<sup>a</sup> Revised.<sup>b</sup> Preliminary.

1. Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.

2. Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries. Beginning in January 1993, excludes Ecuador.

3. Consists of transactions of the Federal Reserve System and the U.S. Treasury Department's Exchange Stabilization Fund.

stock markets advanced and the dollar stabilized in exchange markets. Net purchases from Western Europe were sharply higher. Purchases from emerging markets in Asia also accelerated, as stock prices there recovered from first-quarter losses. Despite an even stronger price recovery in Latin American emerging markets, net purchases slowed slightly. Net purchases from Japan increased despite continued sharp price declines in the Japanese stock market. Partly offsetting these increases was a shift to net sales to the Caribbean.

Net U.S. purchases of foreign bonds surged to \$11.7 billion from \$3.4 billion. Foreign bond markets continued to advance, as long-term interest rates fell in most countries (chart 4). U.S. investors were attracted both to the strong price advances and to the exchange rate gains associated with investment in foreign-currency-denominated bonds. Transactions in outstanding bonds shifted to net purchases of \$7.0 billion from net sales of \$1.8 billion. These net purchases

were strongest from the United Kingdom and Canada; both reflected a shift to net purchases after net sales in the first quarter. Transactions in bonds from Japan and from the Caribbean shifted to net sales from net purchases. New issues of foreign bonds placed in the United States increased to \$6.9 billion from \$6.4 billion; the placements were mainly by private corporations from Western Europe and Canada. Issues placed by governments continued to decrease, largely reflecting the more favorable borrowing rates available to governments in the international syndicated loan market.

*Direct investment.*—Net capital outflows for U.S. direct investment abroad were \$16.1 billion in the second quarter, down sharply from an especially strong outflow of \$22.5 billion in the first quarter. The decrease was more than accounted for by a shift to net equity inflows, which resulted from a slowdown in new

**CHART 3**

1. Includes marketable U.S. Treasury bonds and notes.  
U.S. Department of Commerce, Bureau of Economic Analysis

**CHART 4**

1. Three-month interest rates. Monthly averages.  
2. Ten-year Government bond yields. Monthly averages.  
Data: Federal Reserve Board.  
U.S. Department of Commerce, Bureau of Economic Analysis

investments and from an upturn in selloffs of existing investments. Net intercompany debt outflows decreased. Partly offsetting these decreases was an increase in reinvested earnings.

### *Foreign assets in the United States*

Foreign assets in the United States increased \$114.2 billion in the second quarter, compared with an increase of \$94.8 billion in the first. Capital inflows resulting from net foreign purchases of U.S. securities, including marketable Treasury bonds, reached a record \$50.2 billion in the second quarter (chart 3).

*Foreign official assets.*—Foreign official assets in the United States increased a record \$37.8 billion in the second quarter, following an increase of \$22.3 billion in the first (table D). Assets of non-OPEC developing countries accounted for most of the second-quarter increase; increases were especially large from developing countries in Asia and Latin America. Assets of industrial countries also increased, but at a slower pace than in the first quarter.

*Liabilities reported by banks.*—U.S. liabilities reported by U.S. banks, excluding U.S. Treasury securities, increased \$15.0 billion in the second quarter, in contrast to a decrease of \$0.5 billion in the first. The second-quarter increase consisted of large and nearly offsetting movements among major components of dollar-denominated liabilities and of a large increase in foreign-currency-denominated liabilities.

Banks' liabilities payable in dollars increased \$5.2 billion, in contrast to a \$7.2 billion decrease. Foreign-owned banks borrowed heavily from their own foreign offices to meet loan demand. In contrast, U.S.-owned banks made repayments to their offshore offices. Liabilities to "other private foreigners" increased after a first-quarter decrease; the increase largely reflected a step-up in borrowing by U.S. securities dealers through repurchase agreements.

Banks' own liabilities payable in foreign currencies increased \$9.8 billion, following an increase of \$6.7 billion. The second-quarter increase was largely attributable to inflows to U.S. offices of Japanese banks.

*U.S. Treasury securities.*—Net foreign purchases of U.S. Treasury securities edged up to a record of \$30.0 billion in the second quarter from \$29.9 billion in the first. The U.S. Treasury market ral-

lied throughout the quarter, as both short- and long-term rates declined. Net purchases of marketable bonds increased to a record \$31.0 billion from \$24.7 billion; net purchases were strongest by investors from Japan, the United Kingdom, and investment funds in the Caribbean. In contrast, transactions in Treasury bills shifted to net sales of \$1.1 billion from net purchases of \$5.2 billion; the selloff partly reflected the movement in short-term interest rates, which fell to levels that favored higher yielding money market instruments over short-term Treasuries.

*Other U.S. securities.*—Net foreign purchases of U.S. securities other than U.S. Treasury securities accelerated to \$20.2 billion in the second quarter from \$15.8 billion in the first. Transactions in U.S. stocks shifted to net purchases; this shift was partly offset by a small decrease in net foreign purchases of U.S. corporate and agency bonds.

Transactions in U.S. stocks shifted to net purchases of \$1.9 billion from net sales of \$3.9 billion. Foreign demand for U.S. stocks strengthened as U.S. stock prices advanced sharply and the dollar stabilized in exchange markets. Most of the increase was attributable to investors from the United Kingdom, Asia, and the Caribbean. Partly offsetting these increased net purchases were accelerated net sales by German, Swiss, and Canadian investors.

Net foreign purchases of U.S. corporate bonds remained strong, but decreased \$1.1 billion to \$13.2 billion. The decline partly reflected a slowdown in new issues sold abroad by U.S. corporations to \$12.1 billion from a record \$16.5 billion. Expectations of further declines in interest rates discouraged some borrowers from issuing in the Eurobond market during the second quarter.

Net foreign purchases of U.S. federally-sponsored agency bonds slowed to \$5.0 billion from \$5.3 billion. Included in net purchases were \$2.1 billion of new agency bonds sold abroad.

*Direct investment.*—Net capital inflows for foreign direct investment in the United States were \$11.3 billion in the second quarter, down sharply from \$17.2 billion in the first. Nearly all of the decrease was accounted for by a drop in net equity capital inflows, which reflected a slowdown in acquisitions from a strong first quarter. Reinvested earnings also decreased. Slightly offsetting these decreases was a small increase in net intercompany debt inflows.

Tables 1 through 10 follow. 

## FOOTNOTES TO U.S. INTERNATIONAL TRANSACTIONS TABLES 1-10

General notes for all tables: *R* Revised *P* Preliminary. \*Less than \$500,000 ( $\pm$ ) n.a. Not available.

*D* Suppressed to avoid disclosure of data of individual companies.

**Table 1:**

1. Credits, +: Exports of goods, services, and income; unilateral transfers to United States; capital inflows (increase in foreign assets (U.S. liabilities) or decrease in U.S. assets); decrease in U.S. official reserve assets; increase in foreign official assets in the United States.
2. Debits, -: Imports of goods, services, and income; unilateral transfers to foreigners; capital outflows (decrease in foreign assets (U.S. liabilities) or increase in U.S. assets); increase in U.S. official reserve assets; decrease in foreign official assets in the United States.
3. Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various other adjustments (for valuation, coverage, and timing) of Census statistics to balance of payments basis; see table 2.
4. Includes some goods: Mainly military equipment in line 4; major equipment, other materials, supplies, and petroleum products purchased abroad by U.S. military agencies in line 18; and fuels purchased by airline and steamship operators in lines 7 and 21.
5. Includes transfers of goods and services under U.S. military grant programs.
6. Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from foreign parents.
7. Beginning in 1982, the "other transfers" component includes taxes paid by U.S. private residents to foreign governments and taxes paid by private nonresidents to the U.S. Government.
8. For all areas, amounts outstanding June 30, 1995, were as follows in millions of dollars: Line 34, 90,063; line 35, 11,054; line 36, 11,869; line 37, 14,276; line 38, 52,865. Data are preliminary.
9. Includes sales of foreign obligations to foreigners.
10. Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible bonds and notes.
11. Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S. Government corporations and agencies.
12. Includes, primarily, U.S. Government liabilities associated with military agency sales contracts and other transactions arranged with or through foreign official agencies; see table 4.
13. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and State and local governments.
14. Conceptually, the sum of lines 70 and 62 is equal to "net foreign investment" in the national income and product accounts (NIPA's). However, the foreign transactions account in the NIPA's (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension plans except life insurance carriers and private noninsured pension plans. A reconciliation of the balance on goods and services from the international accounts and the NIPA net export appears in the "Reconciliation and Other Special Tables" section in this issue of the SURVEY OF CURRENT BUSINESS. A reconciliation of the other foreign transactions in the two sets of accounts appears in table 4.5 of the full set of NIPA tables (published annually in the July issue of the SURVEY).
15. Additional footnotes for historical data in June issues of the SURVEY:
16. For 1974, includes extraordinary U.S. Government transactions with India. See "Special U.S. Government Transactions," June 1974 SURVEY, p. 27.
17. For 1978-83, includes foreign currency-denominated notes sold to private residents abroad.
18. Break in series. See Technical Notes in the June 1989, June 1990, June 1992, June 1993, and June 1995 issues of the SURVEY.

**Table 2:**

1. Exports, Census basis, represent transactions values, f.a.s. U.S. port of exportation, for all years; imports, Census basis, represent Customs values (see Technical Notes in the June 1982 SURVEY), except for 1974-81, when they represent transactions values, f.a.s. foreign port of exportation (see June issues of the SURVEY for historical data).
2. From 1983 forward, both unadjusted and seasonally adjusted data have been prepared by BEA from "actual" and "revised statistical" month data supplied by the Census Bureau (see Technical Notes in the December 1985 SURVEY).
3. Seasonally adjusted data reflect the application of seasonal factors developed jointly by Census and BEA. The seasonally adjusted data are the sum of seasonally adjusted five-digit end-use categories (see Technical Notes in the June 1980 SURVEY, in the June 1988 SURVEY, and in the June 1991 SURVEY). Prior to 1983, annual data are as published by the Census Bureau, except that for 1975-80 published Census data are adjusted to include trade between the U.S. Virgin Islands and foreign countries.
4. Beginning in 1990, the Census Bureau replaced its compiled export statistics with counterpart Canadian import statistics. Similarly, Statistics Canada replaced its compiled export statistics with counterpart U.S. import statistics. This exchange of data has eliminated the need for the inland freight adjustment on U.S. exports, but not on U.S. imports.
5. Adjustments in lines A5 and A13, B12, B47, and B82 reflect the Census Bureau's reconciliation of discrepancies between the merchandise trade statistics published by the United States and the counterpart statistics published in Canada. These adjustments are distributed to the affected end-use categories in section C. Beginning in 1986, estimates for undocumented exports to Canada, the largest item in the U.S.-Canadian reconciliation, are included in Census basis data shown in line A1.
6. Exports of military equipment under U.S. military agency sales contracts with foreign governments (line A6), and direct imports by the Department of Defense and the Coast Guard (line A14), to the extent such trade is identifiable from Customs declarations. The exports are included in tables 1 and 10, line 4 (transfers under U.S. military agency sales contracts); the imports are included in tables 1 and 10, line 18 (direct defense expenditures).
7. Addition of electrical energy; deduction of exposed motion picture film for rental rather than sale; net change in stock of U.S.-owned grains in storage in Canada; coverage adjustments for special situations in which shipments were omitted from Census data; deduction of the value of repairs and alterations to foreign-owned equipment shipped to the United States for repair; and the inclusion of fish exported outside of U.S. customs area. Also includes deduction of exports to the Panama Canal Zone before October 1, 1979, and for 1975-82, net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another (see June issues of the SURVEY for historical data).
8. Deduction of foreign charges for repair of U.S. vessels abroad, which are included in tables 1 and 10, line 21 (other transportation); coverage adjustments for special situations in which shipments were omitted from Census data; and the deduction of the value of repairs and alterations to U.S.-owned equipment shipped abroad for repair. Also includes addition of understatement of inland freight in f.a.s. values of U.S. merchandise imports from Canada in 1974-81; deduction of imports from the Panama Canal Zone before October 1, 1979; and for 1975-82, net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another (see June issues of the SURVEY for historical data).
9. For 1988-89, correction for the understatement of crude petroleum imports from Canada.
10. Annual and unadjusted quarterly data shown in this table correspond to country and area data in table 10, lines 2 and 16. Trade with international organizations includes purchases of nonmonetary gold from the International Monetary Fund, transfers of tin to the International Tin Council (ITC), and sales of satellites to Intelsat. The memoranda are defined as follows: *Industrial countries*: Western Europe, Canada, Japan, Australia, New Zealand, and South Africa; *Members of OPEC*: Venezuela, Ecuador, Iraq, Iran, Kuwait, Saudi Arabia, Qatar, United Arab Emirates, Indonesia, Algeria, Libya, Nigeria, and Gabon (beginning in January 1993, excludes Ecuador); *Other countries*: Eastern Europe, Latin America and Other Western Hemisphere, and other countries in Asia and Africa, less OPEC. Before 1984, complete geographic area detail was not available for some balance of payments adjustments. Therefore, the detail shown does not always sum to the values shown for the area aggregates. For all years, "Asia" and "Africa" exclude certain Pacific Islands and unidentified countries included in "Other countries in Asia and Africa."
11. Includes the former German Democratic Republic (East Germany) beginning in fourth quarter of 1990. In earlier periods, the German Democratic Republic was included in Eastern Europe.
12. Beginning in 1986, New Zealand and South Africa are included in "Other countries in Asia and Africa," with New Zealand included as part of "Asia" and South Africa as part of "Africa."
13. Includes nuclear fuel materials and fuels.

**Table 3:**

1. Patented techniques, processes, and formulas and other intangible property rights that are used in goods production.

2. Copyrights, trademarks, franchises, rights to broadcast live events, and other intangible property rights.
3. Other unaffiliated services receipts (exports) include mainly expenditures of foreign governments and international organizations in the United States. Payments (imports) include mainly wages of foreign residents temporarily employed in the United States and Canadian and Mexican commuters in U.S. border areas.

**Table 4:**

1. Expenditures to release foreign governments from their contractual liabilities to pay for military goods and services purchased through military sales contracts—first authorized (for Israel) under Public Law 93-199, section 4, and subsequently authorized (for many recipients) under similar legislation—are included in line A3. Deliveries against these military sales contracts are included in line C10; see footnote 2. Of the line A3 items, part of these military expenditures is applied in lines A40 and A43 to reduce short-term assets previously recorded in lines A38 and C8; this application of funds is excluded from lines C3 and C4. A second part of line A3 expenditures finances future deliveries under military sales contracts for the recipient countries and is applied directly to lines A39 and C9. A third part of line A3, disbursed directly to finance purchases by recipient countries from commercial suppliers in the United States, is included in line A34. A fourth part of line A3, representing dollars paid to the recipient countries to finance purchases from countries other than the United States, is included in line A45.
  2. Transactions under military sales contracts are those in which the Department of Defense sells and transfers military goods and services to a foreign purchaser, on a cash or credit basis. Purchases by foreigners directly from commercial suppliers are not included as transactions under military sales contracts. The entries for the several categories of transactions related to military sales contracts in this and other tables are partly estimated from incomplete data.
  3. The identification of transactions involving direct dollar outflows from the United States is made in reports by each operating agency.
  4. Line A35 includes foreign currency collected as interest and line A40 includes foreign currency collected as principal, as recorded in lines A13 and A14, respectively.
  5. Includes (a) advance payments to the Department of Defense (on military sales contracts) financed by loans extended to foreigners by U.S. Government agencies and (b) the contraentry for the part of line C10 that was delivered without prepayment by the foreign purchaser. Also includes expenditures of appropriations available to release foreign purchasers from liability to make repayment.
  6. Includes purchases of loans from U.S. banks and exporters and payments by the U.S. Government under commercial export credit and investment guarantee programs.
  7. Excludes liabilities associated with military sales contracts financed by U.S. Government grants and credits and included in line C2.
- Table 5:**
1. Beginning with 1991, payments and receipts of interest related to interest rate and foreign currency swaps between affiliates and parents are netted and are shown as either net payments or net receipts. Receipts and payments of other types of interest are shown on a gross basis.
  2. Petroleum includes, and manufacturing and "other" industries exclude, the exploration, development, and production of crude oil and gas, and the transportation, refining, and marketing of petroleum products, exclusive of petrochemicals. "Other" industries includes wholesale trade; banking; finance (except banking), insurance, and real estate; services; and other industries—agriculture, forestry, and fishing; mining; construction; transportation, communication, and public utilities; and retail trade.
  3. Acquisition of equity holdings in existing and newly established companies, capital contributions, capitalization of intercompany debt, and other equity contributions.
  4. Sales (total and partial), liquidations, returns of capital contributions, and other dispositions of equity holdings.

**Table 6:**

1. Primarily provincial, regional, and municipal.
2. Largely transactions by International Bank for Reconstruction and Development (IBRD), International Development Association (IDA), International Finance Corporation (IFC), Asian Development Bank (ADB), and Inter-American Development Bank (IDB).
3. Estimate for scheduled redemptions and identifiable early retirements. Includes estimates based on Canadian statistics for redemptions of Canadian issues held in the United States. Unidentified and nonscheduled retirements appear in line A30.

**Table 7:**

1. Deposits (line A5) include other financial claims (line A6) for some countries due to the commingling of these categories in foreign source data.
2. Primarily mortgages, loans, and bills and notes drawn on foreigners.
3. Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.
4. Bahamas, British West Indies (Cayman Islands), Netherlands Antilles, and Panama.
5. Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries. Beginning in January 1993, excludes Ecuador.

**Table 8:**

1. Includes central governments and their agencies and corporations; state, provincial, and local governments and their agencies and corporations; and international and regional organizations.
2. U.S.-owned banks are mainly U.S.-chartered banks and Edge Act subsidiaries. U.S. brokers' and dealers' accounts may be commingled in some categories. Foreign-owned banks include U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States.
3. Commercial paper issued in the U.S. market by foreign incorporated entities; excludes commercial paper issued through foreign direct investment affiliates in the United States.
4. Negotiable and readily transferable instruments other than commercial paper, payable in dollars; consists largely of negotiable certificates of deposit.
5. Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.
6. Bahamas, British West Indies (Cayman Islands), Netherlands Antilles, and Panama.
7. Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries. Beginning in January 1993, excludes Ecuador.
8. Includes Eastern Europe and international and regional organizations.

**Table 9:**

1. Negotiable certificates of deposit issued by banks in the United States are included in banks' custody liabilities and are separately identified in memorandum line 8. Nonnegotiable certificates of deposit are included in time deposits.
2. Includes borrowing under Federal funds or repurchase arrangements, deferred credits, and liabilities other than deposits.
3. Mainly negotiable and readily transferable instruments, excluding U.S. Treasury securities.
4. Mainly International Bank for Reconstruction and Development (IBRD), International Development Association (IDA), International Finance Corporation (IFC), Asian Development Bank (ADB), Inter-American Development Bank (IDB), and the Trust Fund of the International Monetary Fund.
5. U.S.-owned banks are mainly U.S.-chartered banks and Edge Act subsidiaries. U.S. brokers' and dealers' liabilities may be commingled in some categories. Foreign-owned banks are U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States.
6. Western Europe, Canada, Japan, Australia, New Zealand, and South Africa.
7. Bahamas, British West Indies (Cayman Islands), Netherlands Antilles, and Panama.
8. Based on data for Ecuador, Venezuela, Indonesia, and other Asian and African oil-exporting countries. Beginning in January 1993, excludes Ecuador.
9. Includes Eastern Europe and international and regional organizations.

**Table 10:**

1. For footnotes 1-13, see table 1.
2. The "European Union" includes the "European Union (6)," United Kingdom, Denmark, Ireland, Greece, Spain, and Portugal. Beginning with the first quarter of 1995, the "European Union" also includes Austria, Finland, and Sweden.
3. The "European Union (6)" includes Belgium, France, Germany (includes the former German Democratic Republic (East Germany) beginning in the fourth quarter of 1990), Italy, Luxembourg, Netherlands, European Atomic Energy Community, European Coal and Steel Community, and European Investment Bank.
4. Includes, as part of international and unallocated, the estimated direct investment in foreign affiliates engaged in international shipping, in operating oil and gas drilling equipment internationally, and in petroleum trading. Also includes taxes withheld, current-cost adjustments associated with U.S. and foreign direct investment, and small transactions in business services that are not reported by country.
5. Details not shown separately; see totals in lines 49 and 56.
6. Details not shown separately are included in line 61.

# U.S. International Sales and Purchases of Private Services

- U.S. Cross-Border Transactions, 1994
- Sales by Affiliates, 1993

By Michael A. Mann and Sylvia E. Bargas

**T**HIS ARTICLE presents detailed estimates of U.S. international sales and purchases of private services.<sup>1</sup> The estimates measure transactions that take place through two distinct channels: (1) Cross-border trade in services between U.S. residents and foreign residents, and (2) services transactions by majority-owned affiliates, which cover sales of services abroad by majority-owned foreign affiliates of U.S. companies and sales of services in the United States by majority-owned U.S. affiliates of foreign companies (see the box "Channels of Delivery of Services to Foreign Markets: Cross-Border Transactions and Sales by Affiliates" on page 71).

For cross-border transactions, U.S. purchases of services from foreigners rose 9 percent in 1994, more rapidly than U.S. sales of services to foreigners, which rose 6 percent. The more rapid growth of purchases over sales is a recent phenomenon; in 1987–92, cross-border sales grew considerably faster than purchases.

The most recent year for which data are available on delivery of services through majority-owned affiliates is 1993; in that year, for both channels of delivery, U.S. purchases of services from foreigners expanded more rapidly than U.S. sales of services to foreigners. Purchases were stimulated by economic expansion in the United States, while sales tended to be constrained by sluggish economic conditions in major foreign economies.

Additional highlights for 1993 include the following:

- For U.S. sales of services to foreigners, the predominant channel of delivery was the cross-border channel; for U.S. purchases of services from foreigners, in contrast,

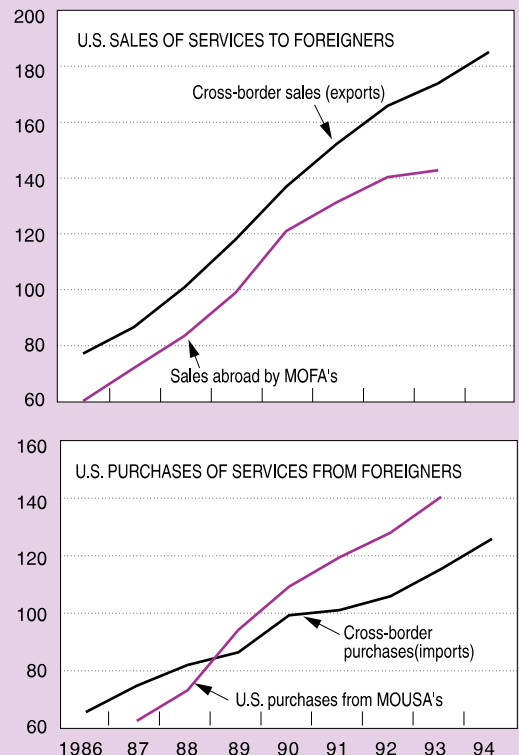

the affiliate channel predominated (table 1, chart 1).

- For Canada and Europe, both sales and purchases were predominantly through the affiliate channel, reflecting heavy concentrations of direct investment in and from the United States. For Latin America and for Asia and Pacific, sales and purchases were predominantly through the cross-border channel,

CHART 1

## U.S. International Sales and Purchases of Private Services, 1986–94

Billion \$

NOTE—Sales by MOFA's reflect the adjustment discussed in the footnote to table 1.  
MOFA: Majority-owned foreign affiliates of U.S. companies  
MOUSA: Majority-owned U.S. affiliates of foreign companies

U.S. Department of Commerce, Bureau of Economic Analysis

1. Most of the estimates in this article are based upon surveys conducted by BEA. BEA's surveys collect data for both sales through affiliates and selected cross-border transactions. For some cross-border services, however, the estimates are based on a variety of other sources, including surveys conducted by other Government agencies, data provided by private sources, customs data, and data obtained from partner countries.

reflecting the smaller concentrations of direct investment in and from those areas (chart 2).

- Most U.S. sales of services to Japan, as to Asia and Pacific generally, were through the cross-border channel (chart 3). However, most U.S. purchases of services from Japan were through the affiliate channel, reflecting the

large amount of Japanese direct investment in the United States.

The remainder of this article is in two parts. The first part discusses cross-border sales and purchases and presents preliminary estimates for 1994 and revised estimates for 1986–93. The second part discusses sales through majority-owned

n.a. Not available.

1. The figures shown on this line for 1986–88 have been adjusted to be consistent with those for 1989 forward, which reflect definitional and methodological improvements made in the 1989 benchmark survey of U.S. direct investment abroad. The primary improvement was that investment

income of affiliates in finance and insurance was excluded from sales of services. The adjustment for 1986–88 was made by assuming that investment income of finance and insurance affiliates accounted for the same share of sales of services plus investment income as in 1989.

affiliates and presents preliminary estimates for 1993 and revised estimates for 1992. This year, the country and area detail shown in several of the tables has been expanded (see the box "Expanded Detail by Country and Region" on page 73).

### U.S. Cross-Border (Balance-of-Payments) Transactions in 1994

Exports of cross-border services (receipts) increased 6 percent in 1994, compared with a 5-percent increase in 1993. Imports of cross-border services (payments) increased 9 percent, the same rate as in 1993. This marked the second consecutive year that imports of private services increased at a faster rate than exports of private services.

The following are highlights of these transactions:

- Exports and imports of all major types of services increased in 1994. In percentage terms, the fastest growing categories for exports were "other transportation" and royalties and license fees. The fastest growing category for imports was royalties and license fees, followed by "other private services."

	Percent change from prior year			
	Exports		Imports	
	1993	1994	1993	1994
Private services .....	5	6	9	9
Travel and passenger fares ....	4	5	6	8
Other transportation .....	1	9	4	7
Royalties and license fees .....	3	9	-4	17
Other private services .....	8	7	22	11

- In dollar terms, the largest increase in exports in 1994 was in "other private services," particularly business, professional, and technical services. The largest increase in imports was in travel and passenger fares.

	Change from prior year in millions of dollars			
	Exports		Imports	
	1993	1994	1993	1994
Private services .....	8,145	11,212	9,591	10,456
Travel and passenger fares ....	3,126	3,397	2,918	4,232
Other transportation .....	292	2,095	1,099	1,815
Royalties and license fees .....	622	1,799	-211	803
Other private services .....	4,104	3,921	5,785	3,606

- By country, U.S. services exports to Japan continued to far exceed those to any other country. U.S. services imports from the United Kingdom continued to exceed those from any other country.

The following two sections discuss cross-border services transactions in 1994 by major type of service and by geographic area.

### By type of service

U.S. services exports and imports of all major types increased in 1994. The continued growth in imports was partly attributable to sustained economic expansion in the United States. The increased growth in exports partly reflected a pickup in economic growth abroad since 1993; nevertheless, growth rates in a number of key trading-partner countries remained well below that in the United States.

*Receipts.*—U.S. receipts for travel and passenger fares combined increased 5 percent, to \$77.9 billion, in 1994, following a 4-percent increase in 1993. The increase in 1994 was more than accounted for by a substantial increase in receipts from travelers from overseas, which was partly offset by a decrease in receipts from Canada. The higher receipts from overseas visitors in 1994 partly reflected the depreciation of the dollar against many foreign currencies; an increase in travel from the Asia and Pacific region accounted for more than 80 percent of the total increase. Travel to the United States from Canada may have been reduced by the depreciation of the Canadian dollar. Receipts from Mexico, in contrast, were about the same as in 1993; the sharp slowdown in the Mexican economy resulting from the devaluation of the peso near the end of 1994 did not greatly affect receipts from Mexico until early 1995.

Receipts for "other transportation" increased 9 percent, to \$26.1 billion, in 1994, following a 1-percent increase in 1993. The sharp acceleration largely reflected a pickup in freight receipts for transporting U.S. merchandise exports. Merchandise exports increased 10 percent, compared with a 4-percent increase in 1993. Receipts from port services also contributed to the pickup.

Receipts for royalties and license fees increased 9 percent, to \$22.4 billion, in 1994, compared with a 3-percent increase in 1993. Nearly three-quarters of the 1994 increase was the result of a rise in receipts by U.S. parent companies from their foreign affiliates, most of which were concentrated in the manufacturing industry. The increase also partly reflected an increase in receipts of licensing fees from unaffiliated companies abroad for the use of industrial processes.

Receipts for "other private services" increased 7 percent, to \$59.0 billion, in 1994, following

an 8-percent increase in 1993. Affiliated services receipts increased 10 percent, and unaffiliated services receipts increased 6 percent. In dollar terms, however, the increase in unaffiliated services receipts exceeded that in affiliated receipts, largely reflecting an increase in business, professional, and technical services, which include approximately 20 categories of services. Other unaffiliated services categories were mixed: Net receipts for insurance services (that is, premiums received less losses paid) increased sharply, though from a low level; education and financial services each increased at modest rates; and telecommunications services were virtually unchanged.

*Payments.*—U.S. payments for travel and passenger fares increased 8 percent, to \$56.3 billion, in 1994, a moderate acceleration from a 6-percent increase in 1993. The increase in 1994 reflected an increase in U.S. travel overseas despite the depreciation of the dollar against many foreign currencies.

Payments for “other transportation” increased 7 percent, to \$28.4 billion, compared with a 4-percent increase in 1993. Increases in ocean

freight and port services accounted for much of the step-up. Freight charges for the transportation of goods by truck between the United States and Canada also increased more rapidly in 1994. Nearly one-half of the 1994 increase was in “other transportation” payments to European countries, while another one-quarter was in payments to Canada.

Payments for royalties and license fees increased 16 percent, to \$5.7 billion, in sharp contrast with a 4-percent decrease in 1993. The increase in 1994 largely reflected payments for special, nonrecurring events—specifically, broadcast rights and sponsorship fees for the Winter Olympics and the World Cup soccer tournament. However, all subcomponents of this category exhibited moderate to strong growth.

Payments for “other private services” increased 11 percent, to \$36.0 billion, a sharp deceleration from the 22-percent increase in 1993. The deceleration was almost entirely accounted for by payments to the United Kingdom, which increased \$0.4 billion, or 5 percent, after an unusually large increase of \$2.6 billion, or 62 percent; much of the deceleration reflected de-

### Channels of Delivery of Services to Foreign Markets: Cross-Border Transactions and Sales by Affiliates

Services are delivered to foreign markets through two distinct channels. In cross-border transactions, services are sold by persons in one country to persons in another country. The full amounts of these transactions are recorded directly in the international transactions accounts of both countries—as exports in the accounts of the seller’s country and as imports in the accounts of the buyer’s country. The second channel of delivery is sales by affiliates—which, from the U.S. viewpoint, are sales to foreigners by foreign affiliates of U.S. companies or U.S. purchases from other countries’ U.S. affiliates. These sales enter the international transactions accounts of the parent’s country only indirectly: The income earned by the affiliate on its sales is included (as investment income), but the sales themselves are not.

Although conceptually distinct, both channels may sometimes be involved in the delivery of a particular service. This would be true, for example, in cases where an affiliate sells services abroad, but some of the work is done by the affiliate’s parent and billed to the affiliate. In this case, the amount received by the affiliate from the foreign customer would be recorded under sales by affiliates, and the funds received by the parent for its share of the work would be recorded in cross-border transactions, as intra-firm trade between parents and affiliates.

The two channels of delivery typically differ in their impact on an economy. All other things being equal, an economy will accrue more benefits from international

sales and purchases when local factors of production (such as labor) are used to generate the value added. (The potential benefits even extend to the government, because tax revenues may increase.) Therefore, the economy of the seller usually benefits more from cross-border exports than from sales through foreign affiliates. By the same reasoning, the purchasing economy generally benefits more if the services are bought from local affiliates of foreign companies, rather than through cross-border imports.

Notwithstanding these different economic impacts, the channel of delivery is often largely predetermined by the nature of the service, rather than reflecting a choice between equally viable alternatives. Travel and transportation, for example, are inherently cross-border in nature. Market conditions can also dictate the choice. For example, certain business, professional, and technical services are usually delivered through affiliates because of the need for close and continuing contact between the service providers and their customers. Some services can be delivered equally well through either channel, but these services are more the exception than the rule. Overall, a majority of U.S. sales of services to foreigners have been effected by cross-border transactions in recent years, whereas a majority of U.S. purchases of services from foreigners have been from the foreigners’ affiliates located in the United States.

velopments in insurance. Net payments for insurance services (premiums received less losses paid) to the United Kingdom fell slightly after an unusually large—\$1.4 billion—increase in 1993; this large increase reflected a return to more normal levels, following the large claims related to Hurricane Andrew paid by British reinsurers in 1992. Reduced growth in financial services payments to the United Kingdom also contributed to the deceleration in total payments in 1994.

### By area

Most U.S. services transactions are with a relatively small number of countries. For both exports and imports, 12 countries accounted for almost two-thirds of total U.S. cross-border transactions in private services in 1994 (table A). Moreover, the top five countries accounted for nearly one-half of both total exports and total imports of private services.<sup>2</sup>

For both cross-border services receipts and payments, the United States' five largest trading partners are Japan, the United Kingdom, Canada, Germany, and Mexico. These five partners also accounted for a large share of trade in each of the major services categories. For travel and "other private services"—the two largest categories—these countries accounted for 54 percent and 40 percent, respectively, of total U.S. exports, and for 41 percent and 56 percent, respectively, of total U.S. imports in 1994.

Japan accounted for 16 percent of exports and 11 percent of imports. The U.S. services surplus with Japan reached \$16.0 billion in 1994. This surplus, which is the largest with any country, contrasts sharply with the large merchandise trade deficit with Japan. Much of the surplus was attributable to travel; Japanese travelers to the United States accounted for approximately 20 percent of total U.S. travel and passenger fare receipts in 1994. In contrast, U.S. residents traveling to Japan accounted for less than 6 percent of total U.S. travel and passenger fare payments.

Japan accounted for nearly 20 percent of "other transportation" payments and more than 20 percent of royalty and license fee receipts in 1994. The high share of "other transportation" payments reflects the large volume of U.S. merchandise imports from Japan along with the relatively long distance between the two countries. The high share of royalty and license

fee receipts largely resulted from U.S. parent companies' receipts from their foreign affiliates.

The United Kingdom accounted for 9 percent of exports and 13 percent of imports. U.S. services imports from the United Kingdom, which were the highest from any country, reached \$16.9 billion in 1994. The United Kingdom ranked as the leading country of origin for all major components of services except "other transportation." Passenger fare payments to the United Kingdom accounted for nearly 18 percent of total U.S. passenger fare payments. More U.S. residents traveled to the United Kingdom than to any other country overseas, either as a final destination or as a gateway to other overseas destinations.

Canada accounted for 9 percent of both exports and imports of private services. The U.S. surplus with Canada reached \$5.6 billion in 1994—the largest surplus with any country except Japan. The high level of "other transportation" exports and imports with Canada reflects the high volume of merchandise trade between the two

2. The top five countries with whom U.S. merchandise trade was the largest in 1994 accounted for slightly more than one-half of both total exports and imports. For merchandise exports, these countries are the same five with whom services transactions were the largest. For imports, the top five includes China instead of the United Kingdom.

countries. Exports of "other private services" to Canada exceeded those to any other country; this high level was widespread across the services that comprise this category. Of particular note, exports of telecommunications services to Canada exceeded those to any other country.

Germany accounted for 6 percent of both exports and imports. Receipts from Germany accounted for more than 10 percent of total U.S. receipts of royalties and license fees—the largest share for any country other than Japan. These transactions primarily reflected U.S. parents' receipts from their foreign affiliates, which were largely concentrated in the manufacturing industry. Among transactions with unaffiliated foreigners, passenger fare payments to Germany were relatively high. Apart from the United Kingdom, Germany was the most common destination for U.S. travelers to Europe, either as a final destination or as a gateway to other overseas destinations.

Mexico accounted for 5 percent of exports and 7 percent of imports. Travel and passenger fares dominated services transactions between the United States and Mexico: They accounted for more than 60 percent of total U.S. receipts from Mexico and for nearly 70 percent of total U.S. payments to Mexico. Moreover, Mexico accounted for more than 7 percent of total U.S. travel and passenger fare exports and for 10 percent of total U.S. travel and passenger fare imports. In contrast, Mexico accounted for less

than 3 percent of total U.S. receipts of royalties and license fees and less than 1 percent of U.S. payments.

The next seven largest U.S. trading partners for both services exports and imports were primarily in Europe and Asia. Combined, these seven countries accounted for 17 percent of both services exports and services imports in 1994. For both exports and imports, France was in sixth place, well above the seventh place countries. In contrast, the rankings of the other countries varied, depending on whether the focus is on exports or imports. For exports, the Netherlands was the seventh largest trading partner, whereas, for imports, Italy was the seventh largest. Brazil and Australia were among the top 12 countries for exports; Switzerland and Hong Kong were among the top 12 for imports.

### Sales by Affiliates in 1993

In 1993, worldwide sales of services by nonbank majority-owned foreign affiliates of U.S. companies were \$156.7 billion, up 3 percent from 1992 (table 9). Worldwide sales of services by nonbank majority-owned U.S. affiliates of foreign companies were \$149.0 billion, up 9 percent. The disparity in growth rates largely reflected the generally more rapid economic growth in the United States than in several other major economies in 1993.

### Expanded Detail by Country and Region

During the past year, BEA has completed an initiative to expand the level of detail at which the country estimates of international services are published. Tables 2, 3, and 5 now include estimates for an additional 22 countries. Previously, estimates of cross-border services transactions with each of these countries were not available, but were included implicitly in area totals.

Tables 2, 3, and 5 now also include new regional groups for Africa, for the Middle East, and for Asia and Pacific. Previously, these regions were aggregated and shown as "other countries." The new groups indicate that 87 percent of services transactions previously included in "other countries" were with countries in Asia and Pacific, 8 percent were with countries in the Middle East, and 5 percent were with countries in Africa.

The expanded number of countries and the new regional groups will now be presented consistently in all of the detailed tables, beginning with the estimates for 1992; estimates for prior years could not be prepared, because of limitations of the source data. It was pos-

sible to introduce these new estimates because of both improved source data and utilization of greater detail in other source data. For travel and passenger fares, increased airline participation and a larger number of responses to voluntary travel surveys permitted estimation for the additional countries. In addition, source data on the number of visitors, which are an integral part of the travel and passenger fare estimates, are now available more promptly. For "other transportation," data from BEA's surveys of receipts and payments were applied to data on shipping weights of exports and imports available by country from the Census Bureau. For "other private services," most data are available by country from BEA's surveys of selected services with affiliated and unaffiliated foreigners.

Also new this year is table A, which identifies the major trading partners and provides a cross-section of the relative size of various transactions with major trading partners. Among these partners are three countries—Switzerland, Brazil, and Hong Kong—for which data were previously included in area totals.

Sales of services by affiliates tend to be predominantly local, reflecting the importance of proximity to the customer in the delivery of many services. In 1993, sales in the country of the affiliate accounted for 79 percent of worldwide sales of services by foreign affiliates. Reflecting in part the large internal market of the United States, they accounted for an even larger share—94 percent—of sales by U.S. affiliates.<sup>3</sup> For foreign affiliates, an additional 12 percent of sales were to foreign (non-U.S.) countries other than the one in which the affiliate was located. Only 9 percent of foreign-affiliate sales were to U.S. persons, and a majority of these sales were to the U.S. parents of the affiliate making the sale.

The following two sections discuss foreign affiliates' sales to foreign persons and U.S. affiliates' sales to U.S. persons, both of which represent sales delivered to international markets through the channel of direct investment. These sales are classified according to the primary industry of the affiliate, unlike the cross-border transactions, which are generally classified by type of service. The sales are shown by country of affiliate or ultimate beneficial owner (UBO) in [table 10](#) and by industry of affiliate cross-classified by country in [table 11](#) (for foreign affiliates) and [table 12](#) (for U.S. affiliates).

### *Foreign affiliates' sales to foreign persons*

In 1993, foreign affiliates' sales of services to foreign persons were up 2 percent, to \$143.1 billion, following a 7-percent increase in 1992. The 1993 increase was the smallest since 1984. The sluggish growth was partly due to economic stagnation in

3. For foreign affiliates, local sales are a significantly higher share of total sales of services than of goods. In 1989, the most recent year for which comparable data are available, the shares were 78 percent for services and 66 percent for goods.

Europe; it also reflected the appreciation of the U.S. dollar against major European currencies, which lowered the dollar value of sales denominated in foreign currencies. For the first time since this series began in 1982, foreign sales of services by European affiliates decreased, by \$0.6 billion. Within Europe, the decrease was concentrated in Italy, France, and the United Kingdom.

In other major areas, sales by affiliates increased. Affiliates in Asia and Pacific had the largest increase, at \$1.5 billion; affiliates in Japan more than accounted for this increase. Affiliates in Canada had the next largest increase—\$0.9 billion.

By industry, affiliates in insurance had the largest increase in sales—\$2.4 billion—nearly one-half of which was accounted for by affiliates in life insurance.<sup>4</sup> The largest decrease in sales—\$1.9 billion—was in wholesale trade and was more than accounted for by affiliates in “professional and commercial equipment and supplies.”

*By area.*—Affiliates in Europe had the largest share of foreign affiliates' sales of services to foreigners in 1993. These affiliates accounted for 56 percent of the total, up from 54 percent in 1989, the earliest year for which comparable data are available for both foreign affiliates and U.S. affiliates. Within Europe, affiliates in the United Kingdom, Germany, France, and the Netherlands accounted for the largest shares of sales.

After European affiliates, affiliates in Canada had the largest share, 13 percent, down from

4. Sales of services by affiliates in insurance differ conceptually from the balance of payments measure of cross-border insurance transactions. The cross-border transactions are measured as premiums net of losses, while the data on sales by affiliates largely represent premiums and are not net of losses. However, estimates of cross-border receipts and payments of insurance premiums are shown separately in [table 6](#).

## Acknowledgments

The estimates of cross-border transactions were prepared by the following staff members of the Balance of Payments and International Investment Divisions:

Travel and passenger fares—Joan Bolyard and Laura Brokenbaugh

Other transportation—Patricia Watts and Kathy Hoang

Royalties and license fees and other private services—affiliated, Gregory G. Fouch (for transactions of U.S. affiliates) and Mark W. New (for transactions of U.S. parents); unaffiliated, Ralph Kozlow, Shirley J. Davis, Rafael I. Font, Annette Boyd, Faith Brannam, Hope Jones, Christine Locke-Paddon, Steven Muno, Daniel Thomas, John Sondheimer, and Kimberly Chesley.

The estimates of sales of services by affiliates were prepared by staff members of the International Investment Division. The estimates of sales by foreign affiliates were prepared by the staff of the Annual and Benchmark Section of the Direct Investment Abroad Branch; the estimates of sales by U.S. affiliates were prepared by the staff of the Annual and Benchmark Section of the Foreign Direct Investment in the U.S. Branch.

John Sondheimer was responsible for consolidating the information contained in tables 2, 3, and 5. Smith W. Allnutt, Peter Bowman, Jane M. Fry-Emond, and Arnold Gilbert established data retrieval systems and were responsible for the computer generation of most of the remaining tables for this article.

16 percent in 1989; this decline probably reflects the relatively sluggish economic conditions in Canada during this period. The share of Japanese affiliates was 11 percent, up from 10 percent in 1989.

*By industry.*—Affiliates classified in the “services” division of the Standard Industrial Classification (SIC)—a narrower definition of “services” than that used elsewhere in this article—had the most sales of services to foreign persons in 1993.<sup>5</sup> These affiliates accounted for 33 percent of total sales of services to foreigners. Within “services,” sales were largest in computer and data processing and in “other” services (mainly personnel supply and other miscellaneous business services).

After “services,” sales were largest in insurance, which accounted for 19 percent of the total. Nearly 80 percent of the sales in insurance were by affiliates in Japan, Canada, the United Kingdom, Bermuda, and Taiwan, each of which had sales exceeding \$1.0 billion.

Also large were sales of services by affiliates in manufacturing, wholesale trade, and “other industries.” Affiliates in manufacturing accounted for 12 percent of total sales of services to foreigners, and those in wholesale trade, for 11 percent. In both industries, most of the sales were of computer and data processing services provided by affiliates whose primary line of business was the manufacture or distribution of computers and related peripheral equipment. Affiliates in “other industries”—mainly transportation and public utilities—accounted for a 9-percent share of sales.

### *U.S. affiliates' sales to U.S. persons*

In 1993, sales of services to U.S. persons by U.S. affiliates of foreign companies were up 10 percent, to \$140.5 billion, following a 7-percent increase in 1992. Affiliates with UBO's in Europe had the largest increase in sales, \$6.9 billion, most of which was accounted for by insurance affiliates. Affiliates with UBO's in Canada had the next largest increase—\$3.4 billion—followed by those with UBO's in Asia and Pacific, with a \$2.1 billion increase.

5. The “services” category of the SIC is dominated by business services, such as advertising, accounting, and computer and data processing services. It also includes hotel, health, and motion picture services. For a more complete list, see the group “services” in tables 11 and 12.

### Data Availability

The estimates are available on diskette for \$20.00. The diskette covers cross-border transactions for 1986–94 and transactions by majority-owned affiliates for 1989–93. Estimates for years before 1992 do not reflect the expanded country detail presented in this article (see the box on page 73). To order this diskette, call (202) 606–9545; MasterCard and Visa are accepted. When ordering, please provide accession number 58–93–40–501.

*By area.*—Affiliates with European UBO's accounted for the largest share of U.S. affiliates' total sales of services to U.S. persons in 1993. These affiliates accounted for 60 percent of the total, down slightly from 1989. Within Europe, affiliates with UBO's in the United Kingdom, France, Switzerland, and Germany accounted for the largest shares of sales.

After affiliates with European UBO's, affiliates with UBO's in Canada had the largest share of sales—17 percent, down from 20 percent in 1989. The share of Japanese-owned affiliates was 14 percent, up from 8 percent in 1989. The gain in the share of Japanese-owned affiliates at the expense of that of Canadian-owned affiliates largely reflected the much more rapid growth in Japanese investment in the United States during this period.

*By industry.*—U.S. affiliates in insurance had the largest sales to U.S. persons in 1993. Nearly one-half of the sales in insurance were by affiliates with UBO's in the United Kingdom and Canada. By type of insurance, sales by life insurers—primarily those with UBO's in Canada and France—accounted for nearly one-half of the total. Most of the remaining sales were by property and casualty insurers—primarily those with UBO's in the United Kingdom, Switzerland, and Germany.

After insurance affiliates, affiliates classified in “services” had the largest sales to U.S. persons in 1993, accounting for 24 percent of the total. Within “services,” sales were largest in motion pictures, “other” services (mainly personnel supply and other miscellaneous business services), and hotels and other lodging places.

1. Prior to 1990, this line includes data only for the Federal Republic of Germany. Beginning in 1990, this line also includes the former German Democratic Republic.

2. The European Union comprises Belgium, Denmark, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, and the United Kingdom. Prior to 1993, the European Union was known as the European Communities (12). At the beginning of 1995, the Union was enlarged to include Austria, Finland, and Sweden, but data for these countries are not included in this line.

3. Eastern Europe comprises Albania, Armenia, Azerbaijan, Belarus, Bulgaria, Czech Republic, Estonia, Georgia, Hungary, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Moldova, Poland, Romania, Russia, Slovakia, Tajikistan, Turkmenistan, Ukraine, and Uzbekistan.

NOTE.—The full country and area detail shown in the stub is available only since 1992 (see "Expanded Detail by Country and Region" box for more information).

\* Less than \$500,000

<sup>B</sup> Suppressed to avoid disclosure of data of individual companies.

<sup>1</sup> Receipts for engineering, architectural, construction, and mining services are published net of merchandise exports, which are included in merchandise trade in the U.S. international transactions accounts, and net of outlays abroad for wages, services, materials, and other expenses. In 1991, net receipts were \$1,478 million, derived as gross operating revenues of \$2,901 million less merchandise exports of \$211 million and foreign expenses of \$1,212

million. Payments for engineering, architectural, construction, and mining services are not published net of merchandise imports and outlays for wages and other expenses. Data are not collected for merchandise imports and wages and other expenses, and no estimates are made because they are believed to be small.

<sup>2</sup> See table 2.1 for details.

<sup>3</sup> See footnote 2, table 2.2.

<sup>4</sup> See footnote 3, table 2.2.

\* Less than \$500,000

† Suppressed to avoid disclosure of data of individual companies.

1. Receipts for engineering, architectural, construction, and mining services are published net of merchandise exports, which are included in merchandise trade in the U.S. international transactions accounts, and net of outlays abroad for wages, services, materials, and other expenses. In 1992, net receipts were \$1,935 million, derived as gross operating revenues of \$3,221 million less merchandise exports of \$369 million and foreign expenses of \$918

million. Payments for engineering, architectural, construction, and mining services are not published net of merchandise imports and outlays for wages and other expenses. Data are not collected for merchandise imports and wages and other expenses, and no estimates are made because they are believed to be small.

2. See table 2.1 for details.

3. See footnote 2, table 2.2.

4. See footnote 3, table 2.2.

\* Less than \$500,000

D Suppressed to avoid disclosure of data of individual companies.

1. Receipts for engineering, architectural, construction, and mining services are published net of merchandise exports, which are included in merchandise trade in the U.S. international transactions accounts, and net of outlays abroad for wages, services, materials, and other expenses. In 1994, net receipts were \$2,704 million, derived as gross operating revenues of \$5,001 million less merchandise exports of \$643 million and foreign expenses of \$1,654

million. Payments for engineering, architectural, construction, and mining services are not published net of merchandise imports and outlays for wages and other expenses. Data are not collected for merchandise imports and wages and other expenses, and no estimates are made because they are believed to be small.

2. See table 2.1 for details.

3. See footnote 2, table 2.2.

4. See footnote 3, table 2.2.

To other foreign affiliates .....	8,613	9,821
To unaffiliated foreigners .....	7,773	9,686
<b>Sales by U.S. affiliates</b>		
<b>Total</b> .....	<b>136,136</b>	<b>149,047</b>
To U.S. persons .....	127,969	140,472
To foreign persons .....	8,167	8,575
To the foreign parent group .....	3,964	3,566
To foreign affiliates .....	161	199
To other foreigners .....	4,041	4,809

NOTE.—Sales of services in this table are those characteristic of the following industries: Industries in the "services" division of the Standard Industrial Classification; finance (except banking), insurance, and real estate; agricultural, mining, and petroleum services; and transportation, communication and public utilities. The exclusion of banking reflects the limitation of the data to nonbanks, not a judgment that banking is not a service.

<sup>D</sup> Suppressed to avoid disclosure of data of individual companies.

MOFA Majority-owned foreign affiliate

MOUSA Majority-owned U.S. affiliate

1. For MOFA's, "country" is the country of the affiliate; for MOUSA's, it is the country of the affiliate's ultimate beneficial owner.

2. Foreign affiliates classified in "International" are those that have operations in more than one country and that are engaged in petroleum shipping, other water transportation, or operating movable oil- and gas-drilling equipment.

3. Contains data for U.S. affiliates that have a foreign parent but whose ultimate beneficial owner is a U.S. person.

4. See footnote 2, table 2.2.

5. See footnote 3, table 2.2.

# BUSINESS CYCLE INDICATORS

**NOTE TO USERS:** As a result of a reprogramming of resources at BEA, this section of the SURVEY OF CURRENT BUSINESS will soon be discontinued, probably by the end of 1995; see page ii of the August 1995 issue. A listing of sources, including addresses and telephone numbers, for series in this section will appear in an upcoming issue.

Series originating in Government agencies are not copyrighted and may be reprinted freely. Series from private sources are provided through the courtesy of the compilers and are subject to their copyrights.

Current and historical data for the series shown in the C-pages are available on diskettes, printouts, and the Commerce Department's Economic Bulletin Board. For more information, contact the Business Cycle Indicators Branch, Business Outlook Division (BE-52), Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230. (Telephone: (202) 606-5366; fax: (202) 606-5313.)

NOTE.—This section of the SURVEY is prepared by the Business Cycle Indicators Branch.

e	Estimated.	§	Major revision—see notes.
*	Later data listed in notes.	◇	End of period.

L,C,Lg,U Cyclical indicator series are classified as L (leading), C (coincident), Lg (lagging), or U (unclassified) at reference cycle peaks, troughs, and overall. Series classifications are shown in parentheses following the series titles.

‡ Cyclical indicator series denoted by ‡ are inverted (i.e., the sign is reversed) for cyclical analysis calculations, including classifications, contributions to composite indexes, and current high values.

† Cyclical indicator series denoted by † are smoothed by an autoregressive-moving-average filter developed by Statistics Canada.

For information on composite indexes and other concepts used in this section, see "Business Cycle Indicators: Upcoming Revision of the Composite Indexes" in the October 1993 SURVEY OF CURRENT BUSINESS and "The Composite Index of Coincident Indicators and Alternative Coincident Indexes" in the June 1992 SURVEY.

References to series in this section use the prefix "BCI-" followed by the series number. Unless otherwise noted, series are seasonally adjusted.

Percent change data are centered within the spans: 1-month changes are placed in the ending month, 3-month changes are placed in the 3d month, 6-month changes are placed in the 4th month, 1-quarter changes are placed in the ending quarter, and 4-quarter changes are placed in the 3d quarter.

Diffusion indexes are defined as the percent of components rising plus one-half of the percent of components unchanged. Diffusion index data are centered within the spans: 1-month indexes are placed in the ending month and 6-month indexes are placed in the 4th month.

High values reached by cyclical indicators in the expansion following the last reference cycle trough (March 1991) are shown in boldface type; high values reached prior to the period shown in the table are listed at the bottom of each page. For inverted series, low values are indicated as highs.

Sources for series in this section are shown on pages C-30 through C-32 in the April 1995 SURVEY.

## Page C-1

\* Preliminary September 1995 values: BCI-32 = 49.8, BCI-19 = 578.77, and BCI-109 = 8.75.

1. Data exclude Puerto Rico, which is included in figures published by the source agency.

2. Copyrighted. This series may not be reproduced without written permission from the University of Michigan, Survey Research Center, P.O. Box 1248, Ann Arbor, MI 48106-1248.

3. Excludes BCI-57, for which data are not available.

4. Excludes BCI-77 and BCI-95, for which data are not available.

## Page C-2

\* Preliminary September 1995 value: BCI-32 = 49.8.

1. Data exclude Puerto Rico, which is included in figures published by the source agency.

2. Copyrighted. This series may not be reproduced without written permission from F.W. Dodge, McGraw-Hill, Inc., 24 Hartwell Avenue, Lexington, MA 02173.

## Page C-3

\* Preliminary September 1995 value: BCI-23 = 334.3.

1. Copyrighted. This series may not be reproduced without written permission from Knight-Ridder Financial, 30 South Wacker Drive, Suite 1810, Chicago, IL 60606.

## Page C-4

NOTE.—Major data revision: Funds raised by private nonfinancial borrowers in credit markets (BCI-110) has been revised from 1990 forward to incorporate revised source data. For further information, contact the Board of Governors of the Federal Reserve System, Division of Research and Statistics, Flow of Funds Section, Washington, DC 20551.

\* Preliminary September 1995 values: BCI-122 = 97.4, BCI-123 = 89.4, and BCI-85 = -0.24.

1. Copyrighted. This series may not be reproduced without written permission from the University of Michigan, Survey Research Center, P.O. Box 1248, Ann Arbor, MI 48106-1248.

2. Copyrighted. This series may not be reproduced without written permission from the American Bankers Association, 1120 Connecticut Avenue, NW, Washington, DC 20036.

## Page C-5

\* Preliminary September 1995 values: BCI-119 = 5.80, BCI-114 = 5.26, BCI-116 = 7.43, BCI-115 = 6.63, BCI-117 = 5.91, BCI-109 = 8.75, BCI-19 (1941-43=10) = 578.77, BCI-19 (1967=100) = 629.6, BCI-748 = 1,334.6, BCI-745 = 384.6, BCI-746 = 931.3, BCI-742 = 1,608.4, BCI-747 = 675.6, BCI-743 = 511.9, BCI-750 = 85.69, BCI-758 = 100.55, BCI-755 = 1.4601, BCI-756 = 5.0352, BCI-752 = 0.6414, BCI-757 = 1,613.41, and BCI-753 = 1.3509.

1. Balance of payments basis: Excludes transfers under military grants and Department of Defense sales contracts (exports) and Department of Defense purchases (imports).

2. Organisation for Economic Co-operation and Development.

3. This index is the weighted-average exchange value of the U.S. dollar against the currencies of the other G-10 countries plus Switzerland. Each country is weighted by its 1972-76 global trade. For a description of this index, see the August 1978 *Federal Reserve Bulletin* (p. 700).

4. This index is compiled by the Center for International Business Cycle Research (CIBCR), Graduate School of Business, Columbia University, New York, NY 10027.

## Notes for Pages C-7 Through C-27

The following notes explain general features of the charts that appear in this section:

- Business cycle peaks (P) and troughs (T), as designated by the National Bureau of Economic Research, Inc., are indicated at the top of each chart. The shaded areas represent recessions.

- For each series classified as a cyclical indicator, the timing classifications at peaks, at troughs, and overall are shown in a box adjacent to the title. (L = leading, C = coincident, Lg = lagging, U = unclassified.) A complete list of series titles and sources is shown on pages C-30 through C-32 in the April 1995 SURVEY OF CURRENT BUSINESS.

- *Arithmetic scales* are designated "Scale A." On the same arithmetic scale, equal vertical distances represent equal differences in data. (For example, the vertical distance from 10 to 15 is the same as the distance from 100 to 105.)

- *Logarithmic (log) scales* are designated L-1, L-2, or L-3 to indicate their relative size. On log scales of the same size, equal vertical distances represent equal percentage changes. (For

example, the vertical distance from 10 to 15 is the same as the distance from 100 to 150.) Compared with an L-1 scale, the same percentage change covers half the distance on an L-2 scale and one-third the distance on an L-3 scale.

- Data are monthly unless otherwise indicated. Quarterly data are indicated by a "Q" following the series title.

- Some series include a centered moving average, which is shown as a heavy line superimposed on the actual monthly data.

- Parallel lines across a plotted series indicate a missing data value, change in definition, or other significant break in continuity.

- The box near the end of each plotted series indicates the latest data month (Arabic numeral) or quarter (Roman numeral) shown or, for series computed over a span of time (diffusion indexes and rates of change), the latest data period used in computing the series.

# Index to Historical Data for Selected Series

Some issues of the SURVEY provide historical data for selected Business Cycle Indicators series. The series for which historical data have been shown are listed below by subject, by series number, and by issue. Historical data for additional series will be shown, as space allows, in future issues.

Subject	Series number	Issue	Page	Subject	Series number	Issue	Page
Bank reserves:				Interest rates—Continued:			
Free reserves .....	93	1/95	C-34	Federal funds rate .....	119	11/94	C-42
Member bank borrowings from the Federal Reserve .....	94	1/95	C-34	Mortgage yield, secondary market .....	118	11/94	C-41
Business formation:				Municipal bond yield .....	117	11/94	C-41
Current liabilities of business failures .....	14	11/94	C-30	Treasury bill rate .....	114	11/94	C-39
Index of net business formation .....	12	11/94	C-29	Treasury bond yield .....	115	11/94	C-40
New business incorporations .....	13	11/94	C-29	International comparisons:			
Business loans:				Consumer price indexes:			
Commercial and industrial loans, current dollars .....	72	11/94	C-36	Canada (and changes) .....	733	1/95	C-39
Commercial and industrial loans, 1987 dollars .....	101	10/94	C-48	Federal Republic of Germany (and changes) .....	735	1/95	C-40
Net change in business loans .....	112	11/94	C-38	France (and changes) .....	736	1/95	C-41
Capacity utilization rates:				Italy (and changes) .....	737	1/95	C-42
Manufacturing .....	82	12/94	C-33	Japan (and changes) .....	738	1/95	C-43
Total industry .....	124	12/94	C-33	United Kingdom (and changes) .....	732	1/95	C-38
Capital investment:				Exchange rates:			
Contracts and orders for plant and equipment, 1987 dollars ...	20	10/94	C-38	Canada .....	753	12/94	C-42
Machinery and equipment sales and business construction expenditures.	69	1/95	C-33	Federal Republic of Germany .....	755	12/94	C-43
Composite indexes:				France .....	756	12/94	C-43
Coincident indicators (and changes) .....	920	10/94	C-30-31	Italy .....	757	12/94	C-44
Lagging indicators (and changes) .....	930	10/94	C-33-34	Japan .....	758	12/94	C-44
Leading indicators (and changes) .....	910	10/94	C-28-29	United Kingdom .....	752	12/94	C-42
Ratio, coincident index to lagging index .....	940	10/94	C-35	Weighted-average exchange value of U.S. dollar .....	750	12/94	C-41
Consumer attitudes:				Industrial production indexes:			
Index of consumer confidence .....	122	11/94	C-42	Canada .....	723	12/94	C-35
Index of consumer expectations <sup>1</sup> .....	123	11/94	C-43	Federal Republic of Germany .....	725	12/94	C-36
Index of consumer expectations <sup>2</sup> .....	83	10/94	C-43	France .....	726	12/94	C-36
Index of consumer sentiment .....	58	11/94	C-34	Italy .....	727	12/94	C-37
Consumer installment credit:				Japan .....	728	12/94	C-37
Delinquency rate .....	39	11/94	C-31	OECD, European countries .....	721	12/94	C-34
Net change .....	113	11/94	C-39	United Kingdom .....	722	12/94	C-35
Ratio, credit to personal income .....	95	10/94	C-46	Stock price indexes:			
Total outstanding .....	66	11/94	C-35	Canada .....	743	12/94	C-39
Diffusion indexes:				Federal Republic of Germany .....	745	12/94	C-39
Coincident indicator components .....	951	10/94	C-32	France .....	746	12/94	C-40
Lagging indicator components .....	952	10/94	C-34-35	Italy .....	747	12/94	C-40
Leading indicator components .....	950	10/94	C-29-30	Japan .....	748	12/94	C-41
Employment:				United Kingdom .....	742	12/94	C-38
Average weekly hours, manufacturing .....	1	10/94	C-36	United States (1967=100) .....	19	12/94	C-38
Average weekly overtime hours, manufacturing .....	21	1/95	C-29	Inventories:			
Civilian employment .....	442	1/95	C-36	Manufacturing and trade, change .....	31	1/95	C-29
Civilian labor force .....	441	1/95	C-35	Manufacturing and trade, 1987 dollars .....	70	11/94	C-35
Diffusion index of employees on private nonagricultural payrolls.	963	1/95	C-44	Ratio, manufacturing and trade inventories to sales, 1987 dollars.	77	10/94	C-43
Employee hours in nonagricultural establishments .....	48	1/95	C-32	Labor cost per unit of output, manufacturing, index (and changes).	62	12/94	C-29-30
Employees in goods-producing industries .....	40	1/95	C-30	Money supply:			
Employees on nonagricultural payrolls .....	41	10/94	C-39	Change in money supply M1 .....	85	11/94	C-36
Index of help-wanted advertising .....	46	11/94	C-32	Change in money supply M2 .....	102	11/94	C-37
Participation rate, both sexes 16-19 years of age .....	453	1/95	C-37	Money supply M1, 1987 dollars .....	105	11/94	C-38
Participation rate, females 20 years and over .....	452	1/95	C-37	Money supply M2, 1987 dollars .....	106	10/94	C-48
Participation rate, males 20 years and over .....	451	1/95	C-36	New orders, consumer goods and materials, 1987 dollars .....	8	10/94	C-37
Persons engaged in nonagricultural activities .....	42	1/95	C-31	Prices:			
Ratio, civilian employment to population .....	90	1/95	C-33	Consumer Price Index, all items (and changes) .....	320	11/94	C-43-44
Housing:				Consumer Price Index for services (and changes) .....	120	10/94	C-49-50
Index of new private housing units authorized by local building permits.	29	10/94	C-38	Index of producer prices for sensitive crude and intermediate materials.	98	11/94	C-37
New private housing units started .....	28	11/94	C-31	Index of sensitive materials prices (and changes) .....	99	10/94	C-46-47
Income:				Index of spot market prices, raw industrial materials .....	23	11/94	C-30
Personal income less transfer payments, 1987 dollars .....	51	10/94	C-40	Sales:			
Personal income, 1987 dollars .....	52	11/94	C-33	Manufacturing and trade, 1987 dollars .....	57	10/94	C-41
Ratio, personal income to money supply .....	108	1/95	C-35	Retail stores, 1987 dollars .....	59	11/94	C-34
Wages and salaries in mining, manufacturing, and construction, 1987 dollars.	53	11/94	C-33	Stock price index, 500 common stocks .....	19	10/94	C-37
Industrial production indexes:				Unemployment:			
Business equipment .....	76	12/94	C-32	Average duration in weeks .....	91	10/94	C-44
Consumer goods .....	75	12/94	C-32	Average weekly initial claims for unemployment insurance .....	5	10/94	C-36
Defense and space equipment .....	557	12/94	C-34	Civilian unemployment rate .....	43	11/94	C-32
Durable manufactures .....	73	12/94	C-31	Number of persons unemployed .....	37	1/95	C-30
Nondurable manufactures .....	74	12/94	C-31	Ratio, help-wanted advertising to number unemployed .....	60	1/95	C-32
Total .....	47	12/94	C-29	Unemployment rate, 15 weeks and over .....	44	1/95	C-31
Interest rates:				Unfilled orders, durable goods, 1987 dollars (and changes) .....	92	10/94	C-44-45
Average prime rate charged by banks .....	109	10/94	C-49	Vendor performance, slower deliveries diffusion index .....	32	10/94	C-39
Corporate bond yield .....	116	11/94	C-40				

# BEA INFORMATION

BEA's economic information is available in publications, on computer tapes, on diskettes, and through a variety of other products and services. Most of these are described in *A User's Guide to BEA Information*. For a copy, write to the Public Information Office, BE-53, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230, or call (202) 606-9900.

## Recent Publications from GPO

**ORDER FROM:** Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250-7954. Payment may be by check (made payable to Superintendent of Documents) or charged to a GPO deposit account number, VISA, or MasterCard. Phone (202) 512-1800 or fax (202) 512-2250.

**National Income and Product Accounts of the United States.** (1992–93) Two volumes. Presents the full set of national income and product accounts (NIPA) estimates for 1929–88 that resulted from the most recent comprehensive, or benchmark, revision. Text describes the statistical conventions used in the NIPA's and the definitions and classifications underlying the accounts.

*Vol. 1: 1929–58.* 264 pp. \$15.00 (GPO STOCK NO. 003-010-00236-1).

*Vol. 2: 1959–88.* 424 pp. \$25.00 (GPO STOCK NO. 003-010-00231-0).

**Fixed Reproducible Tangible Wealth in the United States, 1925-89.** (1993) Contains annual estimates of the stock of privately owned and government-owned durable equipment and structures and of durable goods owned by consumers in the United States for 1925-89. Estimates are for fixed nonresidential private capital by major industry group, for residential capital by tenure group, for government-owned fixed capital by type of government, and for 11 types of durable goods owned by consumers. 460 pp. \$25.00. (GPO STOCK NO. 003-010-00235-2).

**Benchmark Input-Output Accounts of the United States, 1987.** (1994) Presents summary and detailed make and use tables for industries and commodities; tables showing commodity and industry output requirements per dollar of commodity demanded; and tables showing the input-output (I-O) commodity composition of personal consumption expenditures and producers' durable equipment expenditures in the national income and product accounts. Presents concepts and methods used in the 1987 benchmark accounts; concordance between I-O and 1987 Standard Industrial Classification codes; description of the components of the measures of output, intermediate inputs, and value added; and mathematical derivation of total requirements tables. 468 pp. \$29.00 (GPO STOCK NO. 003-010-00251-4).

**State Personal Income, 1929–93.** (1995) Presents detailed annual estimates for States and regions of personal income for 1929–93, including estimates of per capita personal income, personal income by major source, and earnings by industry. Also presents annual estimates for States and regions of disposable personal income and per capita disposable personal income for 1948–93 and quarterly estimates of personal income for 1969–93. Provides information about the sources and methods used to prepare the estimates for 1987–93 and samples of all the detailed tables of personal income and employment that are available for regions, States, counties, and metropolitan areas. 444 pp. \$27.00. (GPO STOCK NO. 003-010-00257-3).

**Local Area Personal Income, 1969–92.** (1994) Presents the estimates of personal income and per capita personal income for 1969–92 for the United States, regions, States, counties, and metropolitan areas. Also presents the Census Bureau's estimates of population that were used in

the derivation of per capita personal income. Provides information about the sources and methods used to prepare the estimates for 1987–92 and samples of all the detailed tables of personal income and employment that are available for regions, States, counties, and metropolitan areas. 784 pp. \$41.00. (GPO STOCK NO. 003-010-00249-2).

**New!**

**BEA Regional Projections to 2045: Volume 1, States.** (1995) Presents regional projections for selected economic and population variables for the Nation and States for 1998, 2000, 2005, 2010, 2015, 2025, and 2045. Includes projections for gross state product, employment, and earnings by industry, for personal income by component, and for population for three major age groups. Also includes a statement of methodology. 212 pp. \$13.00. (GPO STOCK NO. 003-010-00256-5).

**Foreign Direct Investment in the United States: 1992 Benchmark Survey, Preliminary Results.** (1994) Presents preliminary results of BEA's 1992 benchmark survey of foreign direct investment in the United States. Benchmark surveys, which are conducted every 5 years, are BEA's most comprehensive surveys in terms of both coverage of companies and subject matter. The publication presents information on the financial structure and operations of U.S. affiliates of foreign direct investors, including data for items—such as employment covered by collective bargaining agreements and merchandise trade by product and country of destination or origin—that are collected only in benchmark survey years. Data are classified by industry of U.S. affiliate, by country of ultimate beneficial owner, and, for selected data, by State. 124 pp. \$7.50 (GPO STOCK NO. 003-010-00248-4).

**Foreign Direct Investment in the United States: Operations of U.S. Affiliates of Foreign Companies, Preliminary 1993 Estimates.** (1995) Presents preliminary results for 1993 from BEA's annual survey covering the financial structure and operations of nonbank U.S. affiliates of foreign direct investors. Data are classified by industry of U.S. affiliate, by country and industry of ultimate beneficial owner, and, for selected data, by State. 104 pp. \$6.50 (GPO STOCK NO. 003-010-00255-7).

**Foreign Direct Investment in the United States: Establishment Data for Manufacturing, 1991.** (1994) A joint effort by BEA and the Bureau of the Census, this is the latest in a series of publications that present new data for foreign-owned U.S. manufacturing establishments (plants), including data on their number, value added, shipments, employment, total employee compensation, employee benefits, hourly wage rates of production workers, cost of materials and energy used, inventories by stage of fabrication, and expenditures for new plant and equipment. The data are disaggregated by detailed industry (up to 459 industries), by State, and by country of investor. 220 pp. \$14.00 (GPO STOCK NO. 003-010-00250-6). *Also available in this series are publications presenting data for 1990*, 216 pp. \$14.00 (GPO STOCK NO. 003-010-00242-5) *and 1988*, 204 pp. \$13.00 (GPO STOCK NO. 003-010-00244-1).

**U.S. Direct Investment Abroad: Operations of U.S. Parent Companies and Their Foreign Affiliates.** (1995) Two publications containing results for 1992 and 1993 from BEA's annual survey of the worldwide operations of U.S. multinational companies. Contains information on the financial structure and operations of U.S. parent companies and their foreign affiliates. Data are classified by country and industry of affiliate and by industry of U.S. parent. 100 pp. \$6.50 each. **Preliminary 1993 Estimates:** GPO STOCK NO. 003-010-00254-9; **Revised 1992 Estimates:** GPO STOCK NO. 003-010-00253-1.
