## Survey of Current Business

### Table of Contents November 1996

## Regular features

### 1. Business Situation

Economic growth slowed in the third quarter of 1996: Real GDP increased 2.2 percent after increasing 4.7 percent in the second quarter. Inflation remained moderate: The price index for gross domestic purchases increased 1.8 percent after increasing 2.1 percent.

### 35. Motor Vehicles, Model Year 1996

In model year 1996, motor vehicle sales increased to 15.5 million units, the highest level in 8 years. Sales of new trucks advanced to another record high, but sales of new cars declined for the second year in a row.

### 58. Reconciliation of the U.S.-Canadian Current Account, 1994 and 1995

The reconciliation of the U.S.-Canadian current account—which reflects how the current-account estimates would appear if both countries used common definitions, methodologies, and data sources—shows a U.S. current-account deficit with Canada for both 1994 and 1995 that is somewhat larger than the deficit shown in the U.S.-published estimates. The annual reconciliation is undertaken because of extensive economic links between the two countries and the need to explain differences in the published Canadian and U.S. estimates of the bilateral current account. The reconciliation process results in greater accuracy of the published estimates and in increased efficiency in producing these estimates.

### 70. U.S. International Sales and Purchases of Private Services: U.S. Cross-Border Transactions in 1995 and Sales by Affiliates in 1994

U.S. international sales and purchases of private services consist of cross-border trade between U.S. and foreign residents and of services delivered to international markets through affiliates of multinational companies. In 1995, U.S. cross-border sales of services to foreigners increased slightly faster than U.S. cross-border purchases of services from foreigners; the fastest growing category for both exports and imports of these services was royalties and license fees. In 1994, the latest year for which data are available on services delivered through affiliates, U.S. purchases of services from majority-owned U.S. affiliates of foreign companies increased faster than sales abroad by majority-owned foreign affiliates of U.S. companies.

## Reports and statistical presentations

### 7. National Income and Product Accounts

- 7. Selected NIPA Tables
- 31. NIPA Charts
- 33. Selected Monthly Estimates

### 43. State Personal Income, 1990:I–1996:II

### 114. 1997 Release Dates for BEA Estimates

## LOOKING AHEAD

**U.S. Direct Investment Abroad.** Preliminary results of BEA's 1994 benchmark survey of U.S. direct investment abroad will be presented in the December SURVEY. These results will update the annual data series on operations of U.S. multinational companies and will provide estimates on several items that are collected only in benchmark surveys.

**SURVEY Statistical Section.** An upcoming issue of the SURVEY will introduce an expanded section of charts and tables that better highlights BEA's national, regional, and international estimates.

# BUSINESS SITUATION

This article was prepared by Larry R. Moran, Ralph W. Morris, and Deborah Y. Sieff.

**E**CONOMIC GROWTH slowed in the third quarter of 1996, according to the "advance" estimates of the national income and product accounts (NIPA's), as real gross domestic product (GDP) increased 2.2 percent after increasing 4.7 percent in the second quarter (chart 1 and table 1).<sup>1</sup> Real gross domestic purchases—GDP less exports plus imports—increased 3.1 percent after increasing 5.2 percent, and the price index for gross domestic purchases increased 1.8 percent after increasing 2.1 percent.

Nearly nine-tenths of the third-quarter increase in real GDP was accounted for by inventory investment (that is, change in business inventories). Final sales of domestic product increased only

0.3 percent after increasing 4.1 percent; producers' durable equipment more than accounted for the increase in final sales.

The deceleration in GDP growth from the second quarter to the third was attributable to personal consumption expenditures (PCE), government spending, residential fixed investment, and exports. PCE increased only 0.4 percent after increasing 3.4 percent; the much smaller third-quarter increase reflected downturns in both durable goods and nondurable goods and a deceleration in services. Government spending decreased 1.4 percent after increasing 7.7 percent; the downturn reflected a downturn in Federal

1. Quarterly estimates in the national income and product accounts are expressed at seasonally adjusted annual rates, and quarter-to-quarter dollar changes are differences between these estimates. Quarter-to-quarter percent changes are annualized and are calculated from unrounded data. Real estimates are expressed in chained (1992) dollars. Price indexes are chain-type indexes.

**Table 1.—Real Gross Domestic Product, Real Gross Domestic Purchases, and Real Final Sales to Domestic Purchasers**

[Seasonally adjusted at annual rates]

<b>Addendum: Final sales of domestic product</b>	<b>6,889.6</b>	<b>22.8</b>	<b>51.0</b>	<b>69.5</b>	<b>4.9</b>	<b>1.4</b>	<b>3.0</b>	<b>4.1</b>	<b>.3</b>

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates usually are not additive. Chained (1992) dollar levels and residuals, which measure the extent of nonadditivity in each table, are found in NIPA tables 1.2, 1.4, and 1.6. Percent changes are found in table 8.1.

## CHART 1

### Selected Measures: Change From Preceding Quarter

Percent

Note—Percent change at annual rate from preceding quarter; based on seasonally adjusted estimates.

U.S. Department of Commerce, Bureau of Economic Analysis

Government spending and a deceleration in State and local government spending. Residential fixed investment decreased 5.8 percent after increasing 16.3 percent, and exports increased 0.6 percent after increasing 5.6 percent. In contrast, inventory investment and nonresidential fixed investment increased more in the third quarter than in the second, and imports increased less than in the second quarter.

*Motor vehicles.*—A major contributor to the third-quarter deceleration in real GDP was motor vehicle

output. Real motor vehicle output decreased 13.4 percent in the third quarter after increasing 49.6 percent in the second; both auto and truck output contributed to the downturn (table 2).<sup>2</sup>

Motor vehicle inventory investment decreased in the third quarter. The decrease was accounted for by a slowdown in the accumulation of truck inventories; the accumulation of car inventories stepped up in the third quarter. For new domestic autos, the inventory-sales ratio calculated from units data

2. A perspective on motor vehicles is provided in "Motor Vehicles, Model Year 1996" in this issue.

### Third-Quarter 1996 Advance GDP Estimate: Source Data and Assumptions

The "advance" GDP estimate for the third quarter is based on preliminary and incomplete source data; as more and better data become available, the estimate will be revised. The advance estimate is based on the following major source data. (The number of months for which data were available is shown in parentheses.)

*Personal consumption expenditures:* Sales of retail stores (3) and unit auto and truck sales (3);

*Nonresidential fixed investment:* Unit auto and truck sales (3), construction put in place (2), manufacturers' shipments of machinery and equipment other than aircraft (3), aircraft shipments (2), and exports and imports of machinery and equipment (2);

*Residential investment:* Construction put in place (2) and single-family housing starts (3);

*Change in business inventories:* Manufacturing and trade inventories (2);

*Net exports of goods and services:* Exports and imports of goods and services (2);

*Government consumption expenditures and gross investment:* Department of Defense outlays (3), other Federal outlays (3), State and local construction put in place (3), and State and local employment (3);

*GDP prices:* Consumer Price Index (3), Producer Price Index (3), price indexes for nonpetroleum merchandise exports and imports (3), and values and quantities of petroleum imports (2).

BEA made assumptions for source data that were not available. Table A shows the assumptions for key series; a more comprehensive listing of assumptions is available on the Department of Commerce's Economic Bulletin Board or from BEA.

Table A.—Summary of Major Data Assumptions for Advance Estimates, 1996:III

[Billions of dollars, seasonally adjusted at annual rates]

	1996					
	April	May	June	July	August	September <sup>1</sup>
Fixed investment:						
Nonresidential structures:						
Buildings, utilities, and farm:						
Value of new nonresidential construction put in place .....	135.5	130.9	137.7	135.5	139.5	138.5
Producers' durable equipment:						
Manufacturers' shipments of complete civilian aircraft .....	18.3	25.3	15.3	15.8	23.7	26.4
Residential structures:						
Value of new residential construction put in place:						
1-unit structures .....	156.8	157.0	156.8	156.9	157.1	156.8
2-or-more-unit structures .....	22.5	21.2	20.9	17.9	18.5	20.7
Change in business inventories nonfarm:						
Change in inventories for manufacturing and trade (except nonmerchant wholesalers) for industries other than motor vehicles and equipment in trade .....	50.7	-23.0	-9.6	39.1	38.4	25.2
Net exports: <sup>2</sup>						
Exports of goods:						
U.S. exports of goods, balance-of-payments basis .....	608.9	616.6	611.7	585.3	607.9	611.2
Excluding nonmonetary gold .....	593.5	604.9	601.3	580.6	601.5	607.5
Imports of goods:						
U.S. imports of goods, balance-of-payments basis .....	795.9	818.1	787.1	795.3	811.8	800.8
Excluding nonmonetary gold .....	777.1	803.0	777.2	789.8	802.2	797.5
Net exports of goods (exports less imports) .....	-187.0	-201.5	-175.4	-210.0	-203.9	-189.6
Excluding nonmonetary gold .....	-183.6	-198.1	-175.9	-209.2	-200.7	-190.0
Government consumption expenditures and gross investment:						
State and local:						
Structures:						
Value of new construction put in place .....	125.7	125.4	125.0	124.6	125.1	124.3

1. Assumed.

2. Nonmonetary gold is included in balance-of-payments-basis exports and imports but is not used directly in the estimation of NIPA exports and imports. Thus, this table shows balance-of-payments-basis exports and imports excluding nonmonetary gold.

increased to 2.2 at the end of the third quarter from 2.0 at the end of the second; the ratio remained below the traditional industry target of about 2.4.

Final sales of motor vehicles to domestic purchasers decreased 4.6 percent in the third quarter after decreasing 0.3 percent in the second. Auto sales decreased after increasing; truck sales decreased less in the third quarter than in the second.

Motor vehicle sales to consumers decreased after increasing; sales of both autos and trucks decreased. The decrease in motor vehicle sales to consumers is somewhat surprising in light of the strength in factors frequently considered in analyses of overall consumer spending: Real disposable personal income jumped 4.9 percent after increasing 1.3 percent, the unemployment rate decreased to 5.2 percent from 5.4 percent, and the Index of Consumer Sentiment (prepared by the University of Michigan's Survey Research Center) increased to 94.9 percent from 91.5 percent. Part of the explanation of the decrease in sales to consumers was that the share of consumers who chose to lease vehicles rather than to buy them increased in the third quarter; as a result, the share of vehicle sales to consumers decreased, and the share of sales to businesses increased.<sup>3</sup> In addition, factors specific to motor vehicle purchases were more in line with the decrease in sales to consumers: Some popular

light-truck models were in short supply, and interest rates on new-car loans increased; for example, the rate on 48-month new-car loans at commercial banks increased to 9.11 percent in the third quarter from 8.93 percent in the second.

Motor vehicle sales to businesses increased sharply in the third quarter; both auto and truck sales contributed. The increase in sales to businesses reflected the pickup in new-vehicle leasing. Sales to government decreased for the second consecutive quarter; trucks accounted for the third-quarter decrease.

Both imports and exports of motor vehicles increased in the third quarter. Autos accounted for most of the increase in imports and more than accounted for the increase in exports.

### Prices

The price index for gross domestic purchases, which measures the prices paid for goods and services purchased by U.S. residents, increased 1.8 percent in the third quarter after increasing 2.1 percent in the second (chart 2 and table 3). Prices of gross domestic purchases less food and energy, which may be a better gauge of the trends in the inflation rate, increased 1.9 percent after increasing 1.2 percent. The smaller increase in the second quarter was primarily traceable to the prices of compensation of government employees. These prices decreased, reflecting the return to normal prices after large increases in the first quarter that were associated with government

<sup>3</sup>. In leasing transactions, the vehicles are first sold to businesses that, in turn, lease them to consumers. The lease payments appear in PCE transportation services, and the value of vehicles sold appears in the transportation equipment component of producers' durable equipment.

Trucks		117.5	5.7	3.0	-4.6	-1.0	21.3	10.6	-14.2	-3.4

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the correspond-

ing chained-dollar estimates usually are not additive. Chained (1992) dollar levels for motor vehicle output, auto and truck output, and residuals, which measure the extent of nonadditivity in each table, are found in NIPA tables 1.4, 8.5, and 8.7.

shutdowns due to a blizzard and the impasse in budget negotiations (these shutdowns increased prices because they reduced government employee services without an accompanying reduction in current-dollar compensation).

Prices of personal consumption expenditures (PCE) increased 1.6 percent after increasing 3.2 percent. Energy prices decreased 7.7 percent after increasing 18.8 percent; large downturns in the prices of gasoline and oil and of fuel oil and coal more than offset a slight acceleration in the price of electricity. Food

prices increased 4.9 percent after increasing 3.7 percent: Prices of beef and veal turned up; prices of processed dairy products, fresh milk and cream, pork, and poultry accelerated; and prices of fresh fruit, processed fruit, and fish and seafood slowed. "Other" PCE prices increased 1.6 percent after increasing 2.2 percent; a slowdown in the prices of transportation and of medical care more than offset a step-up in the prices of durable goods.

Prices of nonresidential fixed investment increased 1.5 percent after increasing 0.1 percent. Prices of structures increased 3.1 percent after increasing 2.0 percent; prices of all major categories accelerated. Prices of producers' durable equipment increased 0.9 percent after decreasing 0.6 percent; prices of industrial equipment and of transportation and related equipment increased more than in the second quarter, and prices of information processing and related equipment decreased less than in the second quarter. Prices of residential investment increased 2.8 percent after increasing 1.3 percent.

Prices of government consumption expenditures and gross investment increased 2.4 percent after decreasing 0.3 percent. Prices paid by the Federal Government increased 0.5 percent after decreasing 0.7 percent; an upturn in nondefense prices more than offset a slowing in national defense prices. Prices paid by State and local governments increased 3.7 percent after no change.

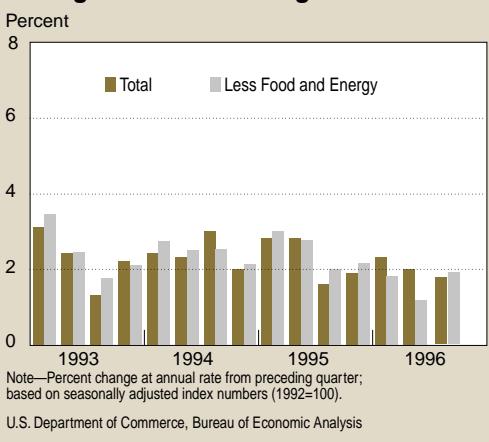

The GDP price index, which measures the prices paid for goods and services produced in the United States, increased 1.9 percent after increasing 2.2 percent. The GDP price index, unlike the price index for gross domestic purchases, includes the prices of exports and excludes the prices of imports. Export prices decreased 1.7 percent after increasing 1.4 percent; prices of foods, feeds, and beverages turned down, and prices of consumer goods except automotive slowed. Import prices decreased 2.0 percent after increasing 0.7 percent; prices of foods, feeds, and beverages turned down, and prices of petroleum and products slowed substantially.

### Personal income

Real disposable personal income (DPI) increased 4.9 percent in the third quarter after increasing 1.3 percent in the second (chart 3). Current-dollar DPI increased 6.5 percent after increasing 4.3 percent. The personal saving rate (saving as a percentage of current-dollar DPI) jumped to 5.4 percent from 4.3 percent, primarily reflecting a sharp slowdown in outlays.

### CHART 2

#### Gross Domestic Purchases Prices: Change From Preceding Quarter

**Table 3.—Price Indexes**

[Percent change at annual rates; based on seasonally adjusted index numbers (1992=100)]

	1995		1996	
	IV	I	II	III
<b>Gross domestic product .....</b>	<b>2.1</b>	<b>2.3</b>	<b>2.2</b>	<b>1.9</b>
Less: Exports of goods and services .....	-1.0	.2	1.4	-1.7
Plus: Imports of goods and services .....	-2.3	.1	.7	-2.0
<b>Equals: Gross domestic purchases .....</b>	<b>1.9</b>	<b>2.3</b>	<b>2.1</b>	<b>1.8</b>
Less: Change in business inventories .....	.....	.....	.....	.....
<b>Equals: Final sales to domestic purchasers .....</b>	<b>1.9</b>	<b>2.3</b>	<b>2.1</b>	<b>1.8</b>
Personal consumption expenditures .....	1.6	2.4	3.2	1.6
Food .....	2.5	2.4	3.7	4.9

Other personal consumption expenditures .....	1.9	1.7	2.2	1.6
Private nonresidential fixed investment .....	-3	-2	.1	1.5
Structures .....	1.8	1.2	2.0	3.1
Producers' durable equipment .....	-1.0	-7	-6	.9
Private residential investment .....	2.2	0	1.3	2.8
Government consumption expenditures and gross investment: .....	4.2	4.1	-3	2.4
Federal .....	7.4	2.0	-7	.5
National defense .....	3.2	3.0	1.7	.1
Nondefense .....	16.2	.1	-5.4	1.2
State and local .....	2.3	5.4	0	3.7

NOTE.—Percent changes in major aggregates are found in NIPA table 8.1. Most index number levels are found in tables 7.1 and 7.2.

Personal income increased \$90.5 billion in the third quarter after increasing \$103.9 billion in the second (table 4). The difference between the changes in personal income and those in DPI reflected personal tax and nontax payments, which increased \$2.7 billion after increasing \$45.7 billion; the large second-quarter increase reflected earlier changes in the Federal income tax law.

Wage and salary disbursements increased \$59.3 billion after increasing \$68.3 billion. The slowdown was more than accounted for by manufacturing; however, service industries also increased less in the third quarter than in the second. Distributive industries and government increased more in the third quarter than in the second. In manufacturing, the third-quarter slowdown reflected a larger decrease in employment than in the second quarter, no change in average weekly hours

after an increase, and slower growth in average hourly earnings.

Proprietors' income increased \$6.7 billion after increasing \$15.7 billion. Farm proprietors' income increased \$2.5 billion after increasing \$7.4 billion; the slowdown reflected lower crop prices and slowdowns in the production of both crops and livestock. Nonfarm proprietors' income increased \$4.1 billion after increasing \$8.3 billion; the slowdown primarily reflected declines in residential construction.

Transfer payments to persons increased \$10.3 billion after increasing \$12.6 billion. The second-quarter increase had been boosted by cost-of-living adjustments (effective April 1) in Fed-

### CHART 3

#### Selected Personal Income and Saving Measures

Billions \$

Note—Changes are from preceding quarter, based on seasonally adjusted annual rates.

U.S. Department of Commerce, Bureau of Economic Analysis

eral Government civilian and military retirement benefits.

Personal dividend income increased \$2.2 billion, slightly less than in the second quarter. "Other labor income" increased \$4.6 billion, about the same as in the second quarter. Personal interest income increased \$9.3 billion after increasing \$7.0 billion. Rental income of persons increased \$2.5 billion af-

ter decreasing \$2.4 billion. The upturn was due to a slowdown in residential housing expenses; in expenses, closing costs and brokerage commissions slowed, reflecting slowdowns in both the number and the value of new home sales.

Personal contributions for social insurance, which is subtracted in the calculation of personal income, increased \$4.4 billion, slightly less than in the second quarter. 

# NATIONAL INCOME AND PRODUCT ACCOUNTS

## Selected NIPA Tables

New estimates in this issue: "Advance" estimates for the third quarter of 1996.

The selected set of NIPA tables shown in this section presents quarterly estimates, which are updated monthly. In most tables, the annual estimates are also shown. (Some of the lines in tables 1.10 and 1.16 are not yet available and are shown as leaders; they will be shown in a forthcoming issue.) These tables are available electronically on the day of the gross domestic product (GDP) news release by subscription from STAT-USA's Economic Bulletin Board and Internet services; for information, call (202) 482-1986. The tables are also available on printouts or diskettes; for subscription information, write to the National Income and Wealth Division (BE-54), Bureau of Economic Analysis, Washington, DC 20230 or call (202) 606-9700.

For a guide to which issues of the SURVEY contain the complete set of NIPA tables for the period 1991-96, see the [headnote and list of tables](#) that appeared on pages 15-17 of the August 1996 issue.

**NOTE.**—This section of the SURVEY is prepared by the National Income and Wealth Division and the Government Division.

### 1. National Product and Income

**Table 1.1.—Gross Domestic Product**

[Billions of dollars]

	1994	1995	Seasonally adjusted at annual rates					
			1995			1996		
			II	III	IV	I	II	III

Nondefense	152.6	152.3	153.5	153.1	147.0	150.6	153.7	153.0
State and local	770.5	788.6	786.3	791.5	794.4	792.6	805.5	805.9
Residual	-5	-6	-2	.3	-6	-2	-1.6	-2.5

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Percent changes from preceding period for selected items in this table are shown in table 8.1; contributions to the percent change in real gross domestic product are shown in table 8.2.

<b>Equals: Gross domestic purchases</b>	<b>6,711.8</b>	<b>6,847.1</b>	<b>6,830.9</b>	<b>6,874.8</b>	<b>6,862.9</b>	<b>6,914.6</b>	<b>7,003.0</b>	<b>7,056.9</b>
Less: Change in business inventories	58.9	33.1	30.5	33.0	14.6	-3.0	7.1	39.6
<b>Equals: Final sales to domestic purchasers</b>	<b>6,653.7</b>	<b>6,813.0</b>	<b>6,799.9</b>	<b>6,839.7</b>	<b>6,846.4</b>	<b>6,915.5</b>	<b>6,995.2</b>	<b>7,016.8</b>

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Percent changes from preceding period for selected items in this table are shown in table 8.1

**Table 1.7.—Gross Domestic Product by Sector**

[Billions of dollars]

Gross domestic product	6,608.7	6,742.9	6,713.5	6,776.4	6,780.7	6,814.3	6,892.6	6,929.7
<b>Business</b> <sup>1</sup>	<b>5,530.3</b>	<b>5,663.4</b>	<b>5,632.7</b>	<b>5,694.1</b>	<b>5,705.7</b>	<b>5,741.6</b>	<b>5,807.3</b>	<b>5,842.7</b>
Nonfarm	5,446.7	5,587.2	5,556.1	5,620.2	5,630.0	5,662.0	5,724.5	5,758.5
Nonfarm less housing	4,885.3	5,013.4	4,984.3	5,046.4	5,049.4	5,085.1	5,146.2	5,175.5
Housing	561.3	573.8	571.7	573.6	580.7	577.4	578.6	583.2
Households and institutions	296.2	302.5	301.6	303.1	305.0	305.5	308.4	310.1
Private households	10.2	10.1	10.1	10.2	10.2	10.3	10.3	10.3
Nonprofit institutions	286.0	292.3	291.5	292.9	294.8	295.3	298.1	299.8
<b>General government</b> <sup>2</sup>	<b>782.4</b>	<b>777.5</b>	<b>779.6</b>	<b>779.7</b>	<b>770.8</b>	<b>768.0</b>	<b>777.7</b>	<b>777.8</b>
Federal	256.8	246.4	249.1	247.7	238.6	238.7	240.4	239.0
State and local	525.8	531.7	530.9	532.5	533.0	530.0	538.1	539.7
Residual	-6	-8	-5	-7	-1.3	-1.6	-1.9	-2.1

1. Gross domestic business product equals gross domestic product less gross product of households and institutions and of general government. Nonfarm product equals gross domestic business product less gross farm product.

2. Equals compensation of general government employees plus general government consumption of fixed capital as shown in table 3.8B.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Net domestic product <sup>3</sup> .....	.....	.....	.....	.....	.....	.....	.....	.....

1. Chained-dollar gross domestic product of nonfinancial corporate business equals the current-dollar product deflated by the implicit price deflator for goods and structures in gross domestic product.

2. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100.

3. Chained-dollar net domestic product of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

## 2. Personal Income and Outlays

**Table 2.1.—Personal Income and Its Disposition**

Other	747.3	757.6	757.4	758.4	763.0	771.8	776.1	777.6
Residual	-1.3	-3.5	-3.1	-3.4	-3.8	-4.8	-6.0	-6.0

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Compensation of general government employees <sup>3</sup>	707.6	727.3	725.1	730.2	732.6	740.6	745.8	752.3
Federal	207.6	207.1	207.3	207.7	205.6	208.5	207.9	207.0
State and local	500.0	520.2	517.8	522.6	526.9	532.1	537.9	545.3

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transferred to foreign countries by the Federal Government.

3. Compensation of government employees engaged in new force-account construction and related expenditures for goods and services are classified as investment in structures. The compensation of all general government employees is shown in the addenda.

4. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

See footnotes to table 3.7B.

Other equipment .....	11.9	12.5	13.6	11.9	12.1	12.5	13.1	12.3

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transferred to foreign countries.

3. Compensation of government employees engaged in new force-account construction and related expenditures for goods and services are classified as investment in structures. The compensation of all general government employees is shown in the addendum.

4. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets.

Compensation of general government employees <sup>3</sup> ....	128.0	120.9	121.9	120.8	117.5	116.6	116.5	116.1

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the line in the addendum.

See footnotes to table 3.10.

1. Includes new computers and peripheral equipment only.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Nonfarm inventories to final sales of goods and structures	4.21	4.16	4.17	4.11	4.07	4.10

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in business inventories (CBI) component of GDP. The former is the difference between two inventory stocks, each valued at their respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates; whereas, CBI is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross product of households and institutions and of general government and includes a small amount of final sales by farm.

**Table 5.13.—Real Inventories and Real Domestic Final Sales of Business by Industry**

[Billions of chained (1992) dollars]

<b>Final sales of goods and structures of domestic business<sup>2</sup></b>	<b>258.8</b>	<b>262.4</b>	<b>263.4</b>	<b>267.0</b>	<b>269.9</b>	<b>270.1</b>
<b>Ratio of inventories to final sales of domestic business</b>						
Inventories to final sales	2.51	2.51	2.50	2.48	2.45	2.47
Nonfarm inventories to final sales	2.28	2.28	2.28	2.26	2.24	2.26
Nonfarm inventories to final sales of goods and structures	4.12	4.10	4.10	4.05	4.01	4.05

1. Inventories are as of the end of the quarter. Quarter-to-quarter changes calculated from this table are at quarterly rates, whereas, the change in the business inventories component of GDP is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross product of households and institutions and of general government and includes a small amount of final sales by farm.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines for inventories.

NOTE.—Chain-type quantity and price indexes are calculated from weighted averages of the detailed output and prices used to prepare each aggregate and component. Implicit price deflators are weighted averages of the detailed price indexes used to prepare each aggregate and component and are calculated as the ratio of current- to chained-dollar output multiplied by 100.

Percent changes from preceding period for items in this table are shown in table 8.1.

Chain-type price index .....	2.2	2.7	5.5	.2	1.0	3.2	4.0	2.5												

NOTE.—Except for disposable personal income, the quantity and price indexes are calculated from weighted averages of the detailed output and prices used to prepare each aggregate and component. Prior to the third quarter of 1995, these indexes use the geometric mean of weights that reflect the composition of output for the preceding and current years. Beginning with the third quarter of 1995, these indexes use weights that reflect the composition

of output in 1995. Implicit price deflators are weighted averages of the detailed price indexes used to prepare each aggregate and component and are calculated as the ratio of current- to chained-dollar output multiplied by 100. (Contributions to the percent change in real gross domestic product are shown in table 8.2.)

**Table 8.2.—Contributions to Percent Change in Real Gross Domestic Product**

<b>Change in business inventories of new and used autos</b>	<b>1.1</b>	<b>.2</b>	<b>-3</b>	<b>-10.1</b>	<b>-2.8</b>	<b>-16.8</b>	<b>1.4</b>	<b>3.5</b>
New	1.1	-.6	-.2	-8.6	-.5	-19.3	2.6	3.9
Used	0	.6	-.1	-1.6	1.9	1.6	-1.0	-.3
<b>Residual</b>	<b>-.1</b>	<b>.7</b>	<b>.6</b>	<b>.8</b>	<b>.1</b>	<b>1.0</b>	<b>.7</b>	<b>.7</b>
<b>Addenda:</b>								
Domestic output of new autos <sup>1</sup>	118.9	110.2	108.1	111.2	103.3	94.6	112.4	113.0
Sales of imported new autos <sup>2</sup>	56.4	52.1	50.2	51.0	53.1	53.5	49.1	50.4

1. Consists of final sales and change in business inventories of new autos assembled in the United States.

2. Consists of personal consumption expenditures, producers' durable equipment, and gross government investment.

NOTE.—Chained (1992) dollar series are calculated as the product of the chain-type quantity index and the 1992 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

**Table 8.7.—Real Truck Output**

[Billions of chained (1992) dollars]

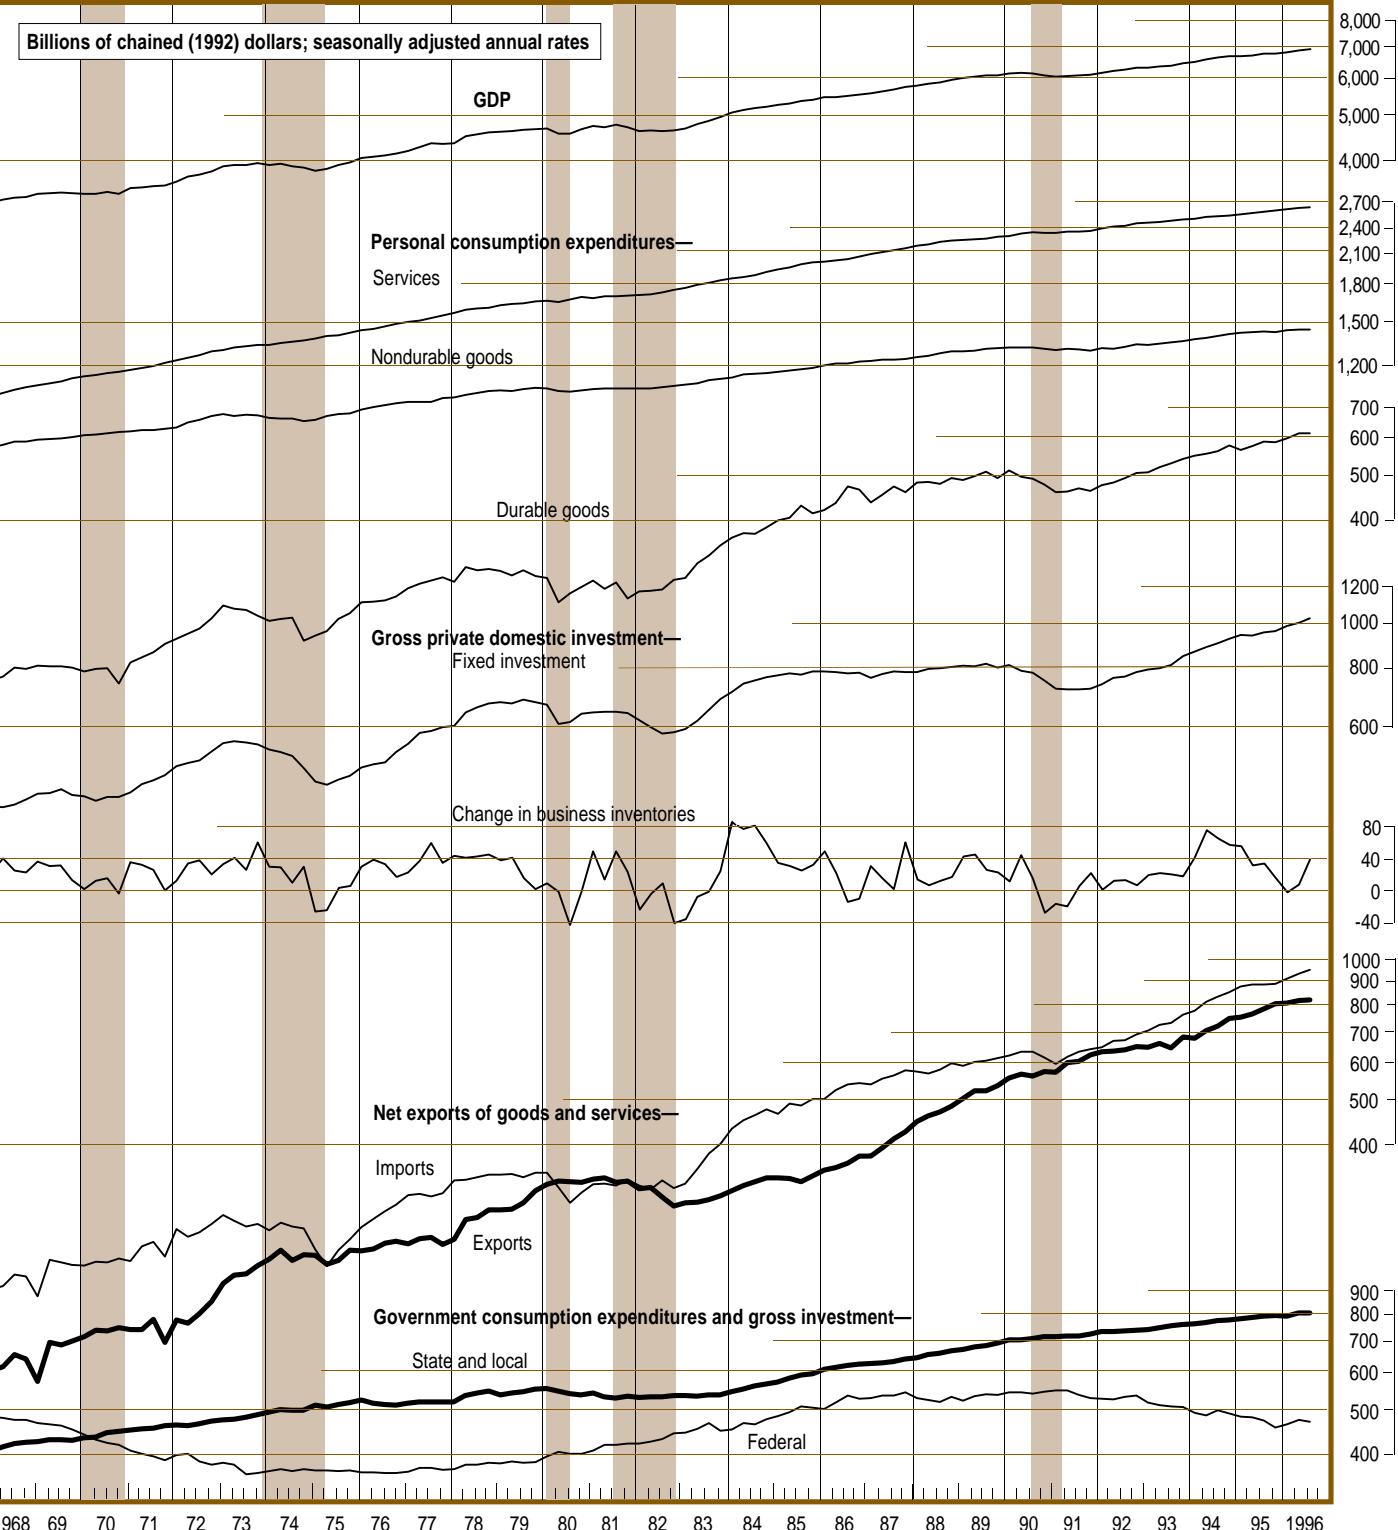

Truck output <sup>1</sup>	111.8	114.5	114.9	111.0	116.4	119.7	114.1	112.4
<b>Final sales</b>	<b>108.8</b>	<b>112.6</b>	<b>110.4</b>	<b>110.1</b>	<b>116.0</b>	<b>119.7</b>	<b>114.1</b>	<b>112.4</b>

## SELECTED SERIES: RECENT QUARTERS

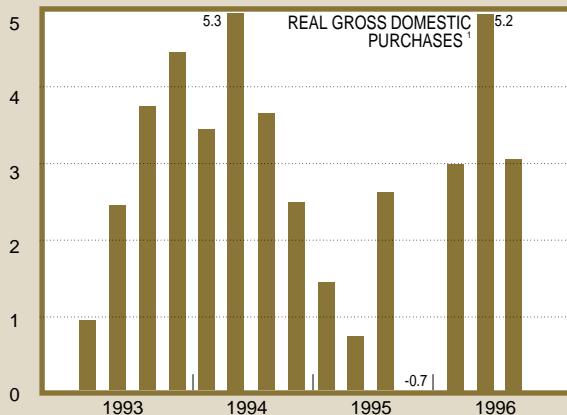

Percent change

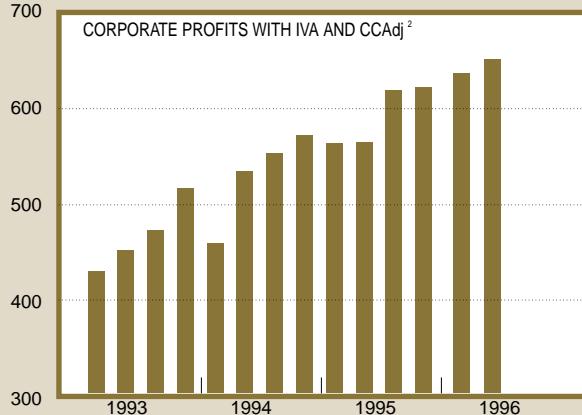

Percent change

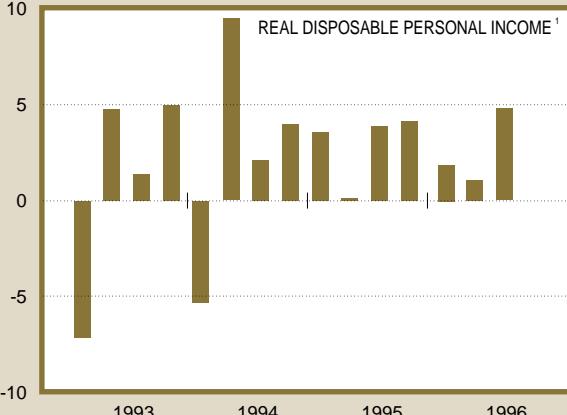

Percent change

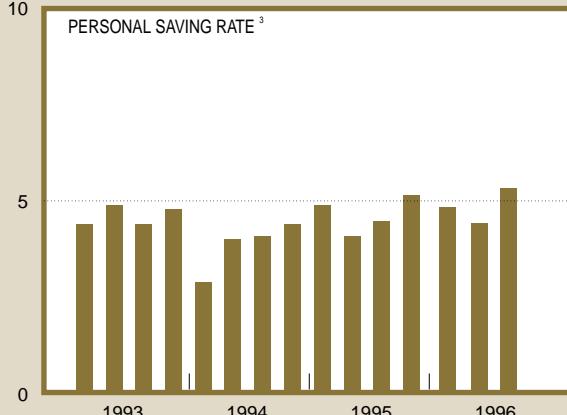

Billion \$

Percent change

Percent

1. Percent change at annual rate from preceding quarter; based on seasonally adjusted estimates.

2. Seasonally adjusted annual rate; IVA is inventory valuation adjustment, and CCAdj is capital consumption adjustment.

3. Personal saving as percentage of disposable personal income; based on seasonally adjusted estimates.

# Motor Vehicles, Model Year 1996

By Ralph W. Morris

**S**ALES OF new motor vehicles in the United States reached 15.5 million units in model year 1996, the highest level in 8 years (chart 1).<sup>1</sup> However, this level of sales is still well below the peak of 16.1 million units in 1986. Sales increased

1. This article uses data on unit sales, inventories, and production mainly from the *Ward's Automotive Reports* and the American Automobile Manufacturers Association, Inc., and data on prices mainly from the Automobile Invoice Service and the Bureau of Labor Statistics, U.S. Department of Labor. These data underlie the estimates of auto and truck output in the national income and product accounts. The quarterly data are seasonally adjusted by BEA.

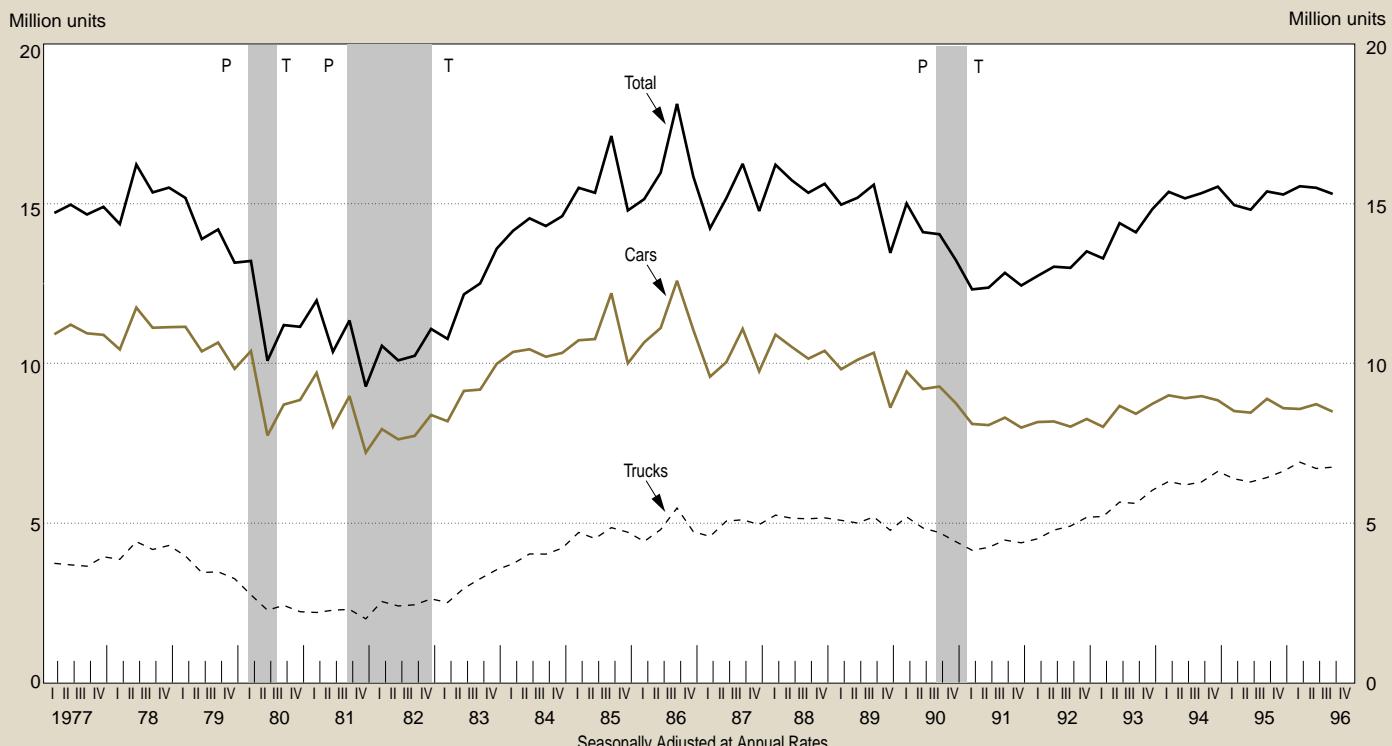

For this article, the model year is defined as beginning on October 1 and ending on the following September 30. Thus, model year 1996 covers the fourth calendar quarter of 1995 and the first, second, and third calendar quarters of 1996. All years mentioned in this article are model years unless otherwise stated.

1.5 percent in 1996 after little change in 1995. In 1996, the increase was more than accounted for by sales of trucks; sales of cars decreased (table 1).

The high level of motor vehicle sales in 1996 reflected a number of factors that provided favorable conditions for consumers to undertake major durable goods purchases. The unemployment rate decreased for the fourth consecutive year. Real disposable personal income increased 3.0 percent. The Index of Consumer Sentiment (prepared by the University of Michigan's Survey Research Center) decreased a little, but its level remained relatively high. In addition, the rise in stock and

## CHART 1

### New Motor Vehicle Sales

Note.—Peak (P) indicates the end of business cycle expansion and the beginning of recession (shaded area). Trough (T) indicates the end of business cycle recession and the beginning of expansion. Business cycle peaks and troughs designated by the National Bureau of Economic Research, Inc.

Data: American Automobile Manufacturers Association, Inc. and *Ward's Automotive Reports*, seasonally adjusted by BEA.

bond prices in recent years has produced sizable gains in wealth for many households; personal sector holdings of corporate equities and mutual funds shares increased about 27 percent.<sup>2</sup>

Several factors specific to the motor vehicle industry were also favorable. Manufacturers offered attractive sales-incentive programs to consumers throughout 1996, and several of these programs covered popular models that had been excluded from earlier programs. These programs included rebates, below-market-rate financing, and discount packages on optional equipment on selected models.

New-vehicle prices increased less in 1996 than in 1995. The consumer price index (CPI) for new cars increased 1.7 percent in 1996 after increasing 2.7 percent in 1995, and the CPI for new light trucks increased 2.6 percent after increasing 3.3 percent. The modest increases in new-vehicle prices reflect efforts by vehicle manufacturers to hold down production costs, as well as the continuation of the sales-incentives programs. These efforts, which include the outsourcing of production to suppliers, have resulted in changes in the motor vehicle parts industry, including the restructuring and the mergers of many major parts-supplying companies. A report by the Federal Reserve Bank of Chicago showed that there were over 130 mergers of suppliers in calendar year 1995, and in

2. Holdings were calculated as the average of the holdings in the middle two quarters of the model year; the data is from the Federal Reserve Board.

### Changes in Methodology

Several important improvements were made to BEA's data on car and truck sales in the comprehensive revision of the national income and product accounts that was released in January 1996. First, BEA reclassified sales of imported sport-utility vehicles and imported vans from car sales to light-truck sales for years back to 1985. In calendar year 1994, for example, 228,619 unit sales were reclassified from car sales to light-truck sales. Second, BEA adopted the seasonal adjustment process developed by the Federal Reserve Board in order to compute the new seasonal adjustment factors for sales of domestic and imported cars and light domestic trucks. These new factors incorporate improved adjustments of sales data to a calendar month basis. Third, BEA revised its estimates of average expenditures per new car to reflect the improved estimates of average base prices and of average expenditures for optional equipment and to incorporate adjustments for rebates, on the basis of additional information from a trade source.

the first 4 months of 1996, over 50 mergers were announced.

Interest rates on new-vehicle loans were lower in 1996 than in 1995. For example, rates for new-car loans made by commercial banks averaged 9.1 percent in 1996, down from 9.4 percent in 1995; rates for loans made by motor vehicle finance companies averaged 10.1 percent, down from 11.1 percent (chart 2).

1. A model year begins on October 1 and ends on September 30, covering the fourth quarter of one calendar year and the first three quarters of the next calendar year.

2. End of quarter, not at an annual rate.

3. Ratio of end-of-quarter inventories to average monthly sales for the quarter.

4. BEA estimate using average base price and adjustments for options, transportation charges,

taxes, discounts, and rebates for each model, weighted that each model's share of sales; not at an annual rate.

Source: American Automobile Manufacturers Association, Inc., and Ward's Automotive Reports; quarterly data are seasonally adjusted by BEA.

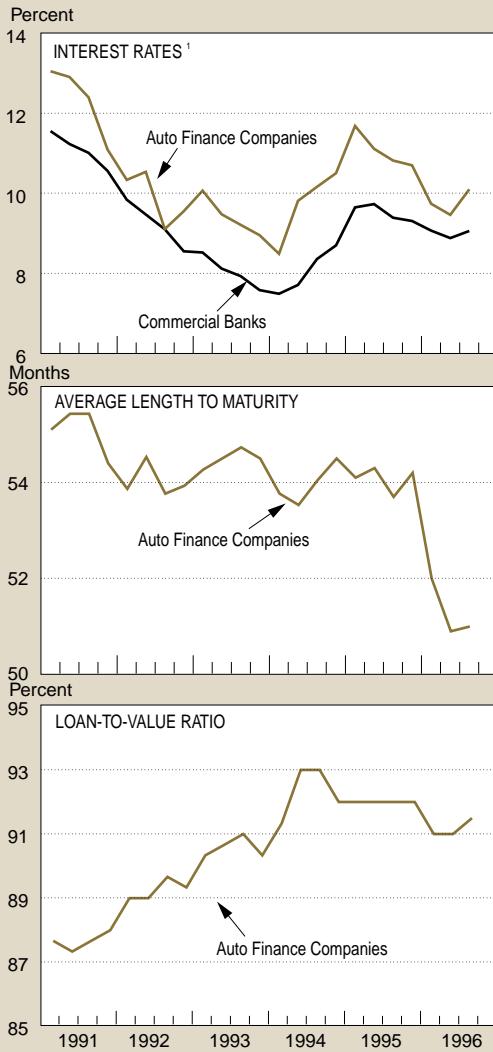

Two trends in the 1990's that have dampened motor vehicle sales probably continued in 1996. First, owners are keeping their vehicles longer; according to estimates by R.L. Polk and Company, the average age of cars on the road reached 8.5 years in calendar year 1995, compared with 7.8 years in 1990. Second, the growth rates in the driving-age population and in household formation slowed in the first half of the 1990's.

## New Cars

Sales of new cars decreased 0.9 percent to 8.7 million units in 1996 after decreasing 2.2 percent in

### CHART 2

#### Finance Terms on 48-Month New Car Installment Loans

1. Most common interest rates (annual percentage rate) at reporting institutions.  
Data: Federal Reserve Board.

U.S. Department of Commerce, Bureau of Economic Analysis

1995. The 1996 decrease was more than accounted for by sales of imported cars; sales of domestic cars increased, as an increase in sales of "transplant" cars more than offset a decrease in sales of domestic-nameplate cars.<sup>3</sup>

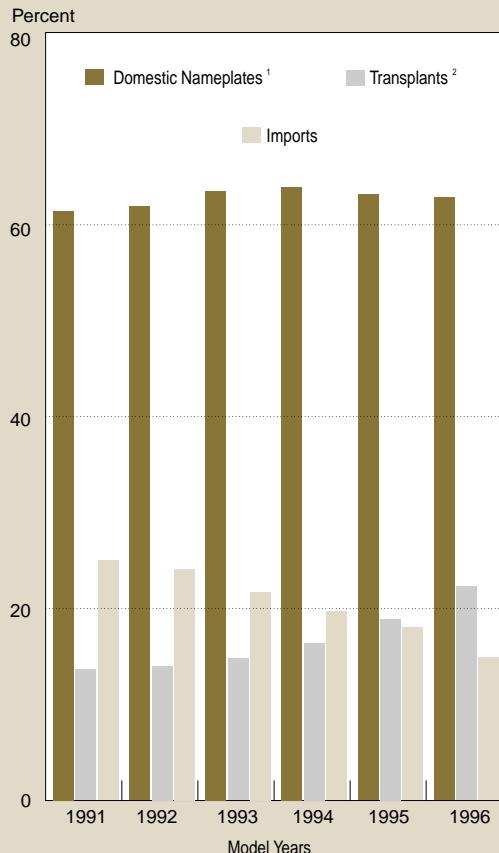

The average expenditure per new car decreased 0.6 percent to \$18,371 in 1996.<sup>4</sup> The decrease reflected a change in the average size of all cars

3. Sales of domestic vehicles consist of sales in the United States of domestic-nameplate vehicles and "transplant" vehicles manufactured in North America—that is, Canada, the United States, and Mexico. Domestic-nameplate vehicles are those manufactured at factories owned by U.S. companies, and transplant vehicles are those manufactured at foreign-owned factories. Imported vehicles are those manufactured outside North America and sold in the United States.

4. BEA derives the average expenditure per new car by adding the price of optional equipment, transportation charges, and taxes to the base price and by subtracting discounts and rebates. Movements in the average expenditure differ from movements in the new-car component of the CPI, because the CPI, unlike the average expenditure, is adjusted to remove the influence of quality change on prices and because the average expenditure, unlike the CPI (which is a fixed-weighted price index), reflects changes in the mix of models and options sold and includes cars sold to businesses and governments as well as cars sold to consumers.

### CHART 3

#### Share of New Cars by Source

1. Domestic nameplates are cars manufactured in North America at factories owned by domestic companies.

2. Transplants are cars manufactured in North America at factories owned by foreign companies.

Data: Motor Vehicle Manufacturers Association of the United States, Inc. and Ward's Automotive Reports, seasonally adjusted by BEA.

U.S. Department of Commerce, Bureau of Economic Analysis

sold: Sales of small cars and middle-sized cars increased, and sales of large cars and luxury cars decreased. For domestic cars, the average expenditure decreased 2.5 percent to \$16,915. In contrast, the average expenditure for imported cars increased 12.5 percent to \$26,633; the increase was partly attributable to a shift in the composition of imported-car sales toward luxury cars.

Sales of domestic cars increased 2.7 percent to 7.4 million units, the highest level since 1989. The increase was accounted for by sales of transplant cars. Sales of transplant cars increased 17.2 percent after increasing 12.5 percent; sales of domestic-nameplate cars decreased 1.6 percent after decreasing 3.3 percent.

Sales of imported cars dropped 17.6 percent to 1.3 million units, the lowest level since 1976.<sup>5</sup> The decrease in imported-car sales continues a trend that began in 1988 and that largely reflects shifts in production by foreign manufacturers from overseas plants to plants in North America. Sales of cars imported from Japan decreased sharply; the decrease occurred despite the strengthening of the U.S. dollar against the Japanese yen. Sales of cars imported from Europe increased moderately in 1996.

The market share (percent of total new-car sales) of domestic-nameplate car sales decreased

to 62.8 percent in 1996 from 63.1 percent in 1995 ([chart 3](#)). The market share of transplant-car sales increased to 22.3 percent from 18.9 percent. The market share of imported-car sales decreased to 14.9 percent from 18.0 percent.

By size class, the 1996 decrease in car sales was accounted for by a decrease in sales of large cars and of luxury cars; sales of small cars and of middle-sized cars increased ([chart 4](#)). Sales of large cars decreased to 0.9 million units, and their market share decreased from 11.0 percent to 10.0 percent. Sales of luxury cars decreased to 1.1 million, and their market share decreased from 13.6 percent to 13.3 percent. Sales of small cars increased to 2.4 million, and their market share increased from 26.6 percent to 27.4 percent. Sales of middle-sized cars increased to 4.3 million, and their market share increased from 48.8 percent to 49.3 percent.

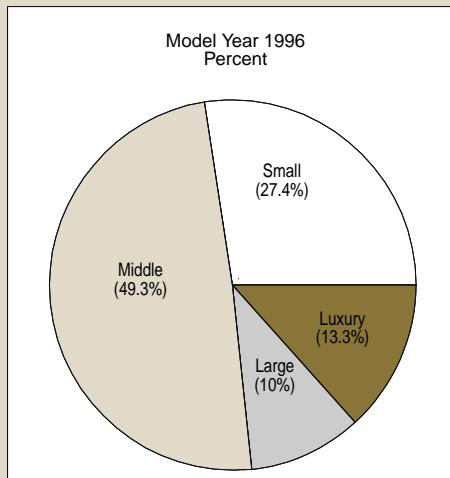

By quarter, new-car sales decreased in the first quarter of the model year, changed little in the second quarter, increased in the third quarter, and decreased in the fourth quarter ([chart 5](#)).

Domestic-car production was 6.2 million units in 1996, the lowest level in 3 years. Domestic-car production was weaker in the first half of the model year than in the second half. One factor that affected car production in the first half was a

5. Unit sales data for imported cars and imported trucks were substantially revised in the recent comprehensive revision of the national income and product accounts; downward revisions of sales of imported cars were largely offset by upward revisions of sales of imported trucks. For information, see the box "Changes in Methodology."

### Data Availability

BEA prepares seasonally adjusted monthly estimates of auto and truck unit sales, auto unit production, and inventory change. The estimates are available online to STAT-USA subscribers (Economic Bulletin Board and Internet site). For information about STAT-USA's services, call (202) 482-1986. These estimates, as well as other motor vehicle estimates, are also available on print-outs and diskettes. For order information, write to the National Income and Wealth Division (BE-54), Bureau of Economic Analysis, Washington, DC 20230, or call (202) 606-9700.

strike in March by workers at two plants of a major motor vehicle manufacturer; the third-quarter pickup in production partly reflected a makeup of the production lost due to the strike. Domestic-car inventories were 1.3 million units at the end of the 1996 model year, considerably lower than at the end of 1995. The inventory-sales ratio was 2.2 at the end of the year, somewhat below the traditional industry target of about 2.4.

In recent years, foreign motor vehicle manufacturers, particularly Japanese manufacturers, have sharply stepped up production in the United States. Transplant cars accounted for about 25 percent of the cars manufactured in the United States in 1996; they had accounted for about 20 percent in 1990. The effect of an increase in the operations of transplants can be seen in the data collected in BEA surveys of foreign direct investment in the United States. Employment by U.S. affiliates of foreign companies in manufacturing in the motor vehicles and equipment industry increased 19 percent from 1990 to 1994 (the most recent year for which data are available); employment at Japanese-owned affiliates increased 54 percent. Sales by the U.S. affiliates of these foreign companies increased 89 percent; sales by Japanese-owned affiliates increased 105 percent. Production at transplants is likely to continue to increase because foreign manufacturers, both Japanese and European, are planning to produce several additional vehicle models at U.S. transplants in model year 1997 and beyond.

### New Trucks

Sales of new trucks increased 4.7 percent to a record 6.8 million units in 1996 after increasing 4.1 percent in 1995. The 1996 increase was mainly accounted for by an increase in sales of light domestic trucks; sales of light imported trucks increased only slightly, and sales of "other" trucks decreased

slightly.<sup>6</sup> The share of total new-motor-vehicle sales accounted for by trucks increased to a record 44.0 percent in 1996 from 42.7 percent in 1995.

Sales of light trucks increased 5.3 percent in 1996 after increasing 3.4 percent in 1995. The 1996 increase was more than accounted for by increases in sales of sport-utility vehicles and conventional pickups; sales of vans and compact pickups decreased.

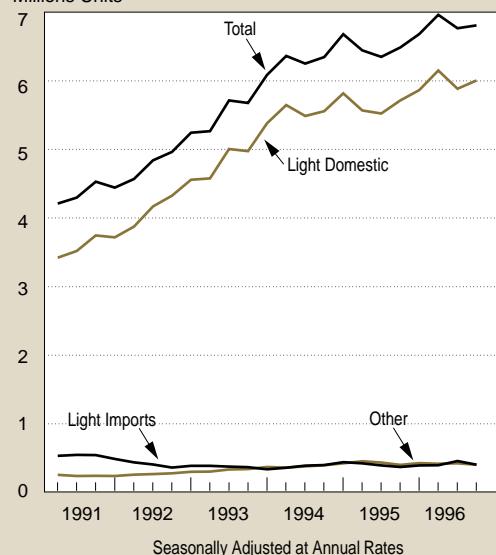

Most light-truck purchases are for personal use rather than for business use; consequently, many of the same factors that affect car sales also affect truck sales. In addition, the relative strength of light-truck sales in 1996 partly reflected the continuation of a trend in which truck purchases have been substituted for car purchases. This trend largely reflects purchases of truck models with additional equipment and refinements that have blurred the distinction between trucks and cars in terms of function and comfort. Many of these trucks also offer recreational and utility features, such as cargo-carrying and towing capacity and four-wheel-drive capability.

6. Light trucks are those with a gross vehicle weight of up to 10,000 pounds; these trucks include light conventional pickups, compact pickups, sport-utility vehicles, and passenger vans. "Other" trucks are those with a gross vehicle weight of over 10,000 pounds; these trucks range from medium-duty general delivery trucks to heavy-duty diesel tractor-trailers.

### CHART 6

#### Retail Sales of New Trucks

Millions Units

Note—Retail sales of domestic trucks are classified by gross vehicle weight as light (up to 10,000 pounds) and "other" (over 10,000 pounds). Imported trucks include imports by U.S. manufacturers.

Data: American Automobile Manufacturers Association, Inc. and Ward's Automotive Reports, seasonally adjusted by BEA.

U.S. Department of Commerce, Bureau of Economic Analysis

Sales of light domestic trucks increased 5.5 percent to 6.0 million in 1996 after increasing 3.0 percent in 1995. The composition of these truck sales in 1996 shifted towards "upscale" models—that is, models with more power, luxury, and options than the basic models. Sales of domestic-nameplate trucks increased 5.8 percent to 5.5 million units; their share of total light-truck sales increased to 86.2 percent. Sales of transplant trucks increased 5.4 percent to 0.5 million units; their market share increased to 7.3 percent.

Sales of light imported trucks were unchanged at 0.4 million units. Sales of imported sport-utility

vehicles increased, but sales of imported pickup trucks decreased; the decrease partly reflected a shift in production by foreign manufacturers from overseas plants to transplants. The imported-truck share of light-truck sales decreased to 6.5 percent.

Sales of "other" trucks remained unchanged at 0.4 million. Nearly all of these trucks are purchased by businesses. The domestic models' share of total sales of all "other" trucks was almost 95 percent.

By quarter, new truck sales increased in the first and second quarters of model year 1996, decreased in the third quarter, and increased in the fourth quarter ([chart 6](#)). 

## State Personal Income, 1990:I–1996:II

THE QUARTERLY ESTIMATES of State personal income presented here incorporate the comprehensive revision to the annual estimates that was released in September. (See "Comprehensive Revision of State Personal Income, 1969–95," SURVEY OF CURRENT BUSINESS 76 (October 1996): 48–93.) Further revisions to the annual estimates for 1969–95, primarily reflecting updates to the residence adjustment, are scheduled for release in August 1997; after these revisions have been included, the comprehensive revision to the State annual estimates for 1969–95 will be fully incorporated into the quarterly estimates in the fall of 1997.

The complete set of the quarterly estimates of State personal income for 1990:I–1996:II is available on a mi-

crocomputer diskette for \$20. The set consists of a table for all States of total personal income, a table for each State of wages and salaries by Standard Industrial Classification (sic) division, and a table for each State of personal income by major source and earnings by sic division. For information on ordering this diskette, e-mail [reis.remd@bea.doc.gov](mailto:reis.remd@bea.doc.gov); write to the Regional Economic Information System, BE-55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call (202) 606–5360. Visa or MasterCard are accepted for telephone orders; please do not send credit card numbers by e-mail.

<sup>r</sup> Revised.<sup>p</sup> Preliminary.

NOTE.—The personal income level shown for the United States is derived as the sum of the State estimates. It differs from the national income and product accounts (NIPA) estimate of personal income because, by definition,

it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms. It can also differ from the NIPA estimate because of different data sources and revision schedules.

**Table 2.—Personal Income by Major Source**  
[Millions of dollars, seasonally adjusted]

NOTE.—The personal income level shown for the United States is derived as the sum of the State estimates; it differs from the national income and product accounts (NIPA) estimate of personal income because, by definition, it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms. It can also differ from the NIPA estimate because of different data sources and revision schedules.

# Reconciliation of the U.S.-Canadian Current Account, 1994 and 1995

By Anthony J. DiLullo and Lucie Laliberté

Anthony DiLullo is the assistant chief of BEA's Balance of Payments Division. Lucie Laliberté is the director of Statistics Canada's Balance of Payments Division. This article will also be published in *Canada's Balance of International Payments, Third Quarter 1996*.

**T**HE RECONCILIATION of the U.S.-Canadian current account resulted in increases in the U.S. deficit, or the Canadian surplus, for both 1994 and 1995. Before reconciliation, the U.S.-published current-account balance with Canada showed a deficit of \$6.0 billion for 1994 and a deficit of \$8.4 billion for 1995. After reconciliation, the U.S. deficit increases to \$6.7 billion for 1994 and to \$10.4 billion for 1995 (chart 1, table 1). The corresponding Canadian-published balance showed a surplus of \$3.1 billion for 1994 and a surplus of \$6.5 billion for 1995; after reconciliation, the surplus increases to \$6.7 billion for 1994 and to \$10.5 billion for 1995.

This article presents the results of the reconciliation of the bilateral current-account estimates of Canada and the United States for 1994 and 1995.<sup>1</sup> The reconciliation is undertaken because of the extensive economic links between the two countries

and the need to explain differences in the published Canadian and U.S. estimates of the bilateral current account. In principle, the bilateral current account of one country should mirror the bilateral current account of the other country.

Differences occur in the bilateral U.S. and Canadian current accounts as published by the Bureau of Economic Analysis (BEA) and by Statistics Canada because of differences in the definitions, methodologies, and statistical sources used by each agency. In addition, some of the differences for 1995 are in components of the current account for which data are still preliminary and subject to revision; these differences may be eliminated when final data for these components become available. The reconciled estimates are intended to assist analysts who use both countries' statistics and to reflect how the current-account estimates would appear if both countries used common definitions, methodologies, and data sources.<sup>2</sup> (A few differences, mainly related to investment income

1. The reconciliation of the current account has been undertaken each year since 1970. Summary results of the reconciliations were published in the United States in the following issues of the SURVEY OF CURRENT BUSINESS: June 1975, September 1976 and 1977, December 1979, June 1981, and December 1981 through 1991. Complete details of the reconciliations for 1990 and later years were published in the November 1992 and the October 1993 through 1995 issues of the SURVEY. In Canada, the results were published in the following issues of *Canada's Balance of International Payments* (catalogue 67-001), a publication of Statistics Canada: Fourth Quarter 1973, Second Quarter 1976 and 1977, Third Quarter 1978 and 1979, First Quarter 1981, and Third Quarter 1981 through 1995.

2. A detailed article on the methodology used to reconcile the U.S.-Canadian current account was published by BEA in the November 1992 SURVEY and by Statistics Canada in *Reconciliation of the Canadian-United States Current Account, 1990-91*. Statistics Canada also published a shortened version in the December 1992 *Canadian Economic Observer* and in *Canada's Balance of International Payments, Third Quarter 1992*.

NOTE.—A U.S. surplus (+) is a Canadian deficit (-), and a Canadian surplus (+) is a U.S. deficit (-).

Details may not add to totals because of rounding.

transactions, cannot be satisfactorily reconciled, because of differences in accounting conventions and survey methods in each country.)

The longstanding Canadian-U.S. current-account reconciliation is among the leading examples of the benefits that can be derived from international data sharing. The reconciliation process and the exchange of data have resulted in greater accuracy of the published estimates of transactions between Canada and the United States and in increased efficiency in producing the estimates. Exchange of data between Canada and the United States for transactions such as trade in goods, travel and passenger fares, Canadian and U.S. Government transactions, and some transportation transactions covers over 80 percent of the value of the Canadian and U.S. current account and has led to the elimination of some differences in Canadian and U.S. published estimates. Wider opportunities for international data sharing may result from the upcoming 1997 yearend coordinated benchmark survey of international portfolio investment to be undertaken by more than 30 countries, including Canada and the United States, under the auspices of the International Monetary Fund.

Although the U.S. and Canadian published estimates are reconciled and there is extensive exchange of data between Canada and the United States, differences in the published estimates remain. Complete substitution of reconciled estimates for published estimates and complete exchange of data are not feasible for several reasons. For trade in goods, imports in the U.S. accounts would be affected because the United States attributes Canadian reexports to the country of origin rather than to Canada, the last country of shipment. For direct investment data, protection of the confidentiality of source data bars the ex-

The reconciliations were carried out under the direction of Lucie Laliberté, director of Statistics Canada's Balance of Payments Division, and Anthony DiLullo, assistant chief of BEA's Balance of Payments Division. At Statistics Canada, Hugh Henderson, Emmanuel Manolikakis, Robert Théberge, Denis Caron, and Linda Tassé participated in the reconciliation of the Canadian accounts. Denis Caron was responsible for the production and coordination of reconciliation tables. At BEA, Russell Scholl, assisted by Jane Newstedt, was responsible for reconciling the U.S. portfolio income accounts; Mark New, for the accounts related to U.S. direct investment in Canada; Gregory M. Fouch, for the accounts related to Canadian direct investment in the United States; and Kwok Lee, for trade in goods.

change of data. Finally, some requirements, such as valuation adjustments, for the integration of the international and national (domestic) accounts in each country differ.

The details of the current-account reconciliation for 1994 and 1995 are presented in the following tables. Tables 2.1 and 2.2 show the major types of reconciliation adjustments—definitional, methodological, and statistical—made to the major current-account components. Tables 3.1 and 3.2 present the published estimates, the reconciled estimates, and the amounts of adjustments for each major component. Tables 4–8 present the reconciliation details for each current-account component.<sup>3</sup>

### Reconciled Current-Account Balances for 1994 and 1995

In the U.S. current account, the reconciliation adjustments resulted in an increase of \$0.7 billion in the deficit for 1994 and in an increase of \$2.0 billion in the deficit for 1995. The changes reflect larger adjustments to the U.S. southbound estimates (payments) than to the northbound estimates (receipts) (tables 2.1 and 2.2).<sup>4</sup> The largest increases in the U.S. southbound estimates result from the addition of Canadian reexports to U.S. imports of goods (a definitional adjustment) and from increases in transportation and "other services" for undercoverage (statistical adjustments). The largest adjustment to the U.S. northbound estimates was an upward statistical adjustment to investment income, which was partly offset by a downward adjustment to transportation.

In the Canadian current account, the reconciliation adjustments resulted in an increase of \$3.6 billion in the surplus for 1994 and in an increase of \$4.0 billion in the surplus for 1995. The changes reflect larger increases to Canadian southbound estimates (receipts) than to Canadian northbound estimates (payments). The Canadian southbound estimates were adjusted to account for statistical differences, mostly in investment income, and for definitional differences in trade in goods. For Canadian northbound estimates, upward adjustments to investment income for statistical differences were partly offset by downward adjustments to services for definitional differences.

Tables 2.1–8.2 follow. 

3. For reconciliation purposes, some of the details in the tables in this article differ from those in balance-of-payments tables regularly published by BEA and Statistics Canada.

4. In this article, the term "northbound" refers to U.S. receipts, or Canadian payments; the term "southbound" refers to U.S. payments, or Canadian receipts. All values are expressed in U.S. dollars.

# U.S. International Sales and Purchases of Private Services

- U.S. Cross-Border Transactions in 1995
- Sales by Affiliates in 1994

Michael A. Mann,  
Daniel J. Atherton,  
and Laura L.  
Brookenbaugh  
prepared the  
section on  
cross-border  
transactions. Sylvia  
E. Bargas prepared  
the section on sales  
by affiliates.

**U.**S. INTERNATIONAL trade in both goods and services relative to total U.S. economic activity has grown over time, reflecting among other factors, the rise in incomes in the United States and abroad, the dismantling of trade barriers, and the technological revolution in communications and transportation. For exports, the growth has been relatively stronger for services than for goods, while for imports, it has been relatively stronger for goods than for services. Associated with these developments have been shifts in trade balances that suggest the emergence of a U.S. comparative advantage in the provision of services. In 1960, the United States had a trade surplus on goods of \$4.9 billion, but trade on private services was roughly in balance. By 1971, the trade surplus on goods had turned into a deficit, which subsequently grew. In contrast, by 1964, the U.S. had a trade surplus

on private services, which increased in most of the years that followed. By 1995, the goods deficit had reached \$173.4 billion, while the services surplus had expanded to \$66.8 billion. Concurrent with these developments in cross-border trade, rapid growth in international direct investment fostered an expansion in the volume of services delivered through affiliates of multinational companies.

This article presents detailed estimates of U.S. international sales and purchases of private services

## CHART 1

### U.S. International Sales and Purchases of Private Services, 1986–95

Billion \$

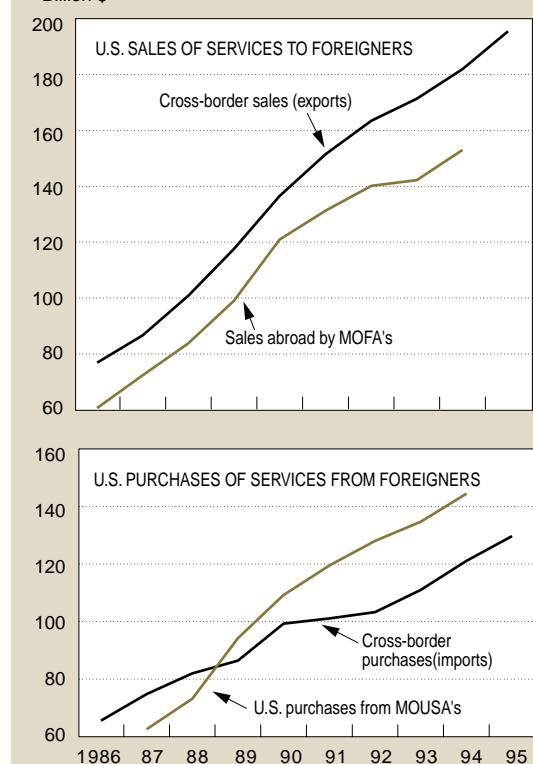

Table A.—Delivery of Services to Foreign and U.S. Markets Through Cross-Border Transactions and Through Sales by Affiliates

Sales to U.S. persons by U.S. affiliates of foreign companies .....	17.0	28.7	15.9	9.5	7.1	5.3	7.2	n.a.		

n.a. Not available.

<sup>1</sup> The figures shown on this line for 1986–88 have been adjusted to be consistent with those for 1989 forward, which reflect definitional and methodological improvements made in the 1989 benchmark survey of U.S. direct investment abroad. The primary improvement was that investment income of affiliates in finance and insurance were excluded from sales of services. The adjustment for 1986–88 was made by assuming that investment income of finance and insurance affiliates accounted for the same share of sales of services plus investment income as in 1989.

NOTE—Data reflect the adjustment discussed in the footnote to table 1.

MOFA Majority-owned foreign affiliates of U.S. companies  
MOUSA Majority-owned U.S. affiliates of foreign companies

U.S. Department of Commerce, Bureau of Economic Analysis

through two distinct channels. The first is cross-border transactions between U.S. residents and foreign residents. These transactions represent international trade in the conventional sense and are recorded, in summary form, in the U.S. international transactions accounts that are published quarterly in the January, April, July, and October issues of the SURVEY OF CURRENT BUSINESS. The second channel is sales of services by majority-owned affiliates of multinational companies, which cover the sales of services abroad by nonbank majority-owned foreign affiliates of U.S. companies and the sales of services in the United States by nonbank majority-owned U.S. affiliates of foreign companies.<sup>1</sup> These sales are drawn from larger data sets on affiliate operations

that are presented and discussed in annual articles in the SURVEY on the operations of U.S. multinational companies and of U.S. affiliates of foreign companies. (For further discussion, see the box below.) Most of the estimates are based on surveys conducted by BEA (see the box "Data Sources" on page 74).

For cross-border transactions, U.S. sales of services to foreigners rose 8 percent in 1995, slightly above the 7-percent growth in U.S. purchases of services from foreigners. In 1995, as in 1994 but not as in most other recent years, both growth rates were well below the corresponding growth rates of trade in goods: U.S. exports of goods increased 15 percent, and U.S. imports of goods increased 12 percent.

Annual data for cross-border transactions now cover 1995, but 1994 is the most recent year for which data are available on services delivered through majority-owned affiliates; in 1994, for both channels of delivery, U.S. purchases of services from foreigners expanded more rapidly than

<sup>1</sup>. These data are limited to nonbank affiliates because the surveys used to collect the data do not cover banking affiliates. The data are limited to majority-owned affiliates because data on sales of services by foreign affiliates are collected only for affiliates that are majority-owned by U.S. direct investors. However, the limitation to majority-owned affiliates may also be preferred on conceptual grounds; with minority-owned affiliates, a direct investor may own as little as 10 percent of the affiliate, but the principal interest in the affiliate's sales may lie with other investors.

## Channels of Delivery of Services to International Markets: Cross-Border Transactions and Sales by Affiliates

Services are delivered to international markets through two distinct channels. The first channel of delivery is cross-border transactions in services that are sold by residents of one country to residents of another country. These transactions include within-firm trade by multinational companies as well as trade between unaffiliated parties. The full amounts of these transactions are recorded directly in the current account of the international transactions accounts of both countries—as exports of services by the seller's country and as imports by the buyer's country.

The second channel of delivery is sales by affiliates of multinational companies—which from the U.S. viewpoint, are sales to foreigners by foreign affiliates of U.S. companies or U.S. purchases from other countries' U.S. affiliates. These sales are not considered U.S. international transactions, because by balance-of-payments-accounting convention, affiliates of multinational companies are regarded as residents of the countries where they are located rather than of the countries of their owners. Thus, sales abroad by foreign affiliates are transactions between foreign residents, and sales in the United States by U.S. affiliates are transactions between U.S. residents. The direct investors' shares of the profits earned on these sales are recorded as U.S. international transactions, but the sales themselves are not.

Although conceptually distinct, both channels may sometimes be involved in the delivery of a particular service. For example, an affiliate might sell services abroad, but the affiliate's parent does some of the work and bills the cost to the affiliate. In this case, the amount received by the affiliate from the foreign customer would be recorded under sales by affiliates, and the funds received by the parent from the foreign affiliate for its share of the work would be recorded in cross-border transactions as intrafirm trade between parents and affiliates. However, because the parent's receipts would be recorded under both channels—directly in the cross-border transactions and implicitly embodied in the sales by affiliates—the data for the two channels

cannot be regarded as free of duplication and therefore cannot simply be added together.<sup>1</sup>

The two channels of delivery typically differ in their effect on an economy. For example, U.S. cross-border exports usually have a greater effect on the U.S. economy than otherwise equivalent sales through foreign affiliates, because most or all of the income generated by the production of the services generally would accrue to U.S.-supplied labor and capital. For sales by foreign affiliates, in contrast, only the U.S. parent company's share in profits would accrue to the United States (and be recorded as a U.S. international transaction); the other income generated by production—including, most importantly, compensation of employees—would accrue to foreigners.

Notwithstanding these differential economic impacts, the channel of delivery is often largely predetermined by the nature of the service rather than reflecting a choice between equally viable alternatives. For example, travel services are inherently cross-border in nature; in contrast, many business, professional, and technical services are delivered mainly through the affiliate channel because of the need for close and continuing contact between the service providers and their customers. Some services can be delivered equally well through either channel, but they are the exception rather than the rule. Overall, a majority of U.S. sales of services to foreigners appear to have been delivered through cross-border transactions in recent years (data on bank affiliate sales are not available), whereas a majority of U.S. purchases of services from foreigners have been from the foreigners' affiliates located in the United States.

<sup>1</sup>. At an aggregate level and for transactions in goods as well as in services, BEA has provided a duplication-free economic-accounting framework for integrating data on cross-border trade with data on sales by affiliates; because of differences in the basis of classification and for other technical reasons, this framework cannot be extended to the level of detail reflected in this article. See "Alternative Frameworks for U.S. International Transactions," SURVEY 73 (December 1993): 50–61; and "An Ownership-Based Disaggregation of the U.S. Current Account, 1982–93," SURVEY 75 (October 1995): 52–61.

U.S. sales of services to foreigners. For cross-border transactions, U.S. purchases increased 9 percent, and U.S. sales increased 6 percent. For services delivered through majority-owned affiliates, U.S. purchases increased 7 percent, and U.S. sales increased 3 percent.<sup>2</sup>

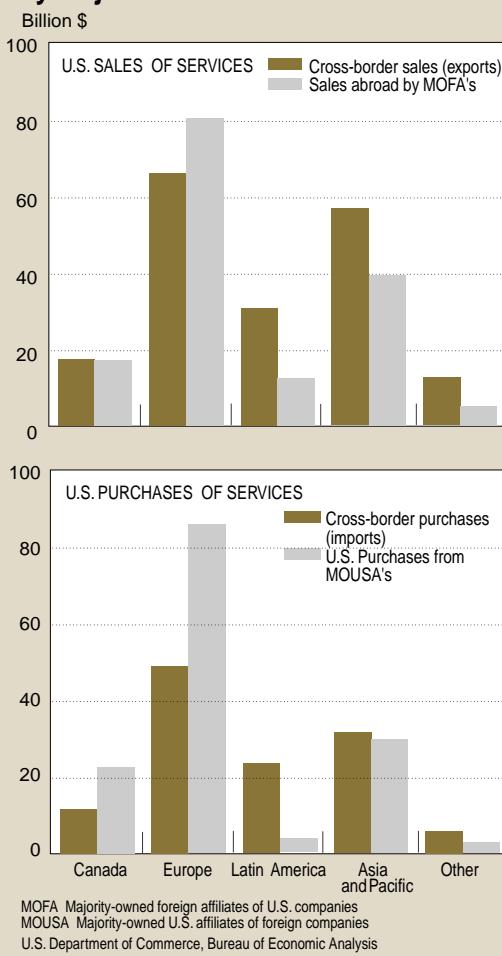

Additional highlights for 1994 include the following:

- For U.S. sales of services to foreigners, the predominant channel of delivery was the cross-border channel; for U.S. purchases of services from foreigners, in contrast, the predominant channel was the affiliate channel (table A, chart 1).
- For Europe, both sales and purchases were predominantly through the affiliate channel

2. The growth rate for sales has been adjusted to exclude the effect of a discontinuity associated with the 1994 Benchmark Survey of U.S. Direct Investment Abroad. See the discussion at the beginning of the section "Sales by Affiliates in 1994."

## CHART 2

### U.S. Sales and Purchases of Services by Major Area in 1994

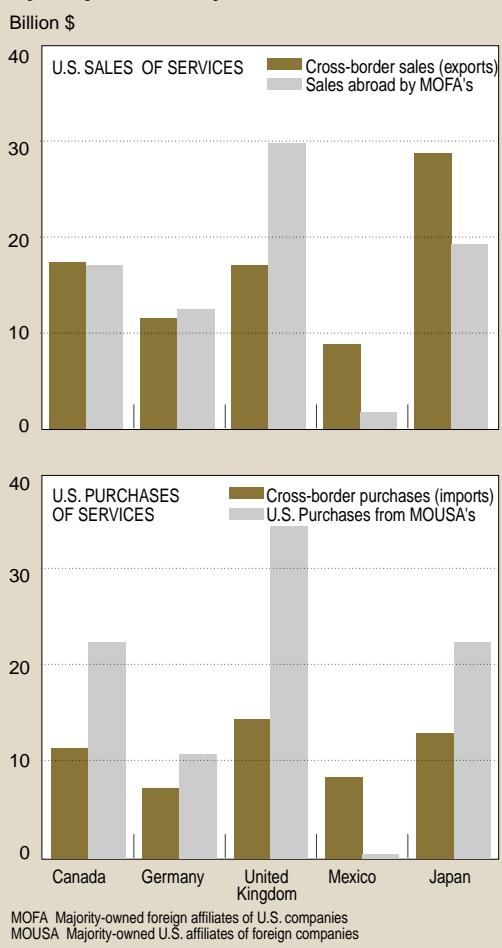

nel, reflecting heavy concentrations of direct investment in and from the United States (chart 2). For Latin America and for Asia and Pacific, sales and purchases were predominantly through the cross-border channel, reflecting the smaller concentrations of direct investment in and from those areas.

- Most U.S. sales of services to Japan were through the cross-border channel (chart 3). However, most U.S. purchases of services from Japan were through the affiliate channel, reflecting the large amount of Japanese direct investment in the United States. For the United Kingdom, the affiliate channel predominated for both sales and purchases. For Canada, purchases were predominantly through the affiliate channel, but sales through the two channels were roughly equal.

## CHART 3

### U.S. Sales and Purchases of Services by Major Country in 1994

The remainder of this article is in two parts. The first part discusses cross-border sales and purchases, and it presents preliminary estimates for 1995 and revised estimates for 1986–94. The second part discusses sales through majority-owned affiliates, and it presents preliminary estimates for 1994 and revised estimates for 1993. The estimates for cross-border transactions in financial services presented in this article reflect new source data (see the box “[Improved Estimates of Unaffiliated Financial Services](#)” on page 75).

## U.S. Cross-Border Transactions in 1995

U.S. exports of cross-border services (receipts) increased 8 percent in 1995, compared with a 6-percent increase in 1994. U.S. imports of cross-border services (payments) increased 7 percent in 1995, down from a 9-percent increase in 1994. The faster growth of exports than of imports in 1995 reversed the pattern of the previous 2 years.

Additional highlights for 1995 are as follows:

- Exports and imports of all the major categories of services increased in 1995. In percentage terms, the fastest growing category of exports was royalties and license fees, followed by “other transportation.” The fastest growing category of imports was royalties and license fees, closely followed by “other private services.”

	Change from prior year in millions of dollars			
	Exports		Imports	
	1994	1995	1994	1995
Private services .....	10,565	13,707	10,132	8,507
Travel and passenger fares .....	1,014	4,171	4,641	3,501
Other transportation .....	1,967	2,202	1,655	1,222
Royalties and license fees .....	1,949	4,681	753	794
Other private services .....	5,635	2,653	3,083	2,990

- By country, U.S. exports of services to Japan continued to far exceed those to any other country and, in contrast to the large U.S. deficit in trade in goods with Japan, were more than double U.S. imports of services from Japan. U.S. services imports from the United Kingdom continued to exceed those from any other country.

The following two sections discuss cross-border services transactions in 1995 by major type of service and by geographic area. These sections, along with the accompanying tables, provide information for more types of services and more geographic areas than are available in the U.S. international transactions accounts. The transactions covered are those of U.S. residents with both affiliated and unaffiliated foreign residents.<sup>3</sup> Affiliated transactions consist of within-firm trade by multinational companies—specifically, transactions between U.S. parent companies and their foreign affiliates and transactions between U.S. affiliates and their foreign parent groups. (Cross-border transactions between affiliated enterprises should not be confused with sales by affiliates, which are discussed in the second half of this article.)

### *By type of service*

Cross-border services are classified under the same five broad categories used in the U.S. international transactions accounts: Travel, passenger fares, other transportation, royalties and license fees, and other private services. These categories are described below, followed by a discussion of developments in each category in 1995.

**Travel.**—This category covers purchases of goods and services by persons traveling abroad for business or personal reasons for less than 1 year. The types of goods and services most likely to be purchased by these travelers are lodging, food,

3. The term “affiliated” refers to a direct investment relationship, in which a business enterprise located in one country is directly or indirectly owned or controlled by an investor in another country to the extent of 10 percent or more of its voting stock for an incorporated business, or an equivalent interest for an unincorporated business.

	Percent change from prior year			
	Exports		Imports	
	1994	1995	1994	1995
Private services .....	6	8	9	7
Travel and passenger fares .....	1	6	9	6
Other transportation .....	8	9	6	4
Royalties and license fees .....	10	21	16	14
Other private services .....	11	4	11	10

- In dollar terms, the largest increase in exports in 1995 was in royalties and license fees, particularly receipts of U.S. parent companies from their foreign affiliates. This increase was largely accounted for by transactions with affiliates in two industries—manufacturing and wholesale trade—and in two areas—in Europe and in Asia and Pacific. The largest increase in imports was in travel and passenger fares.

recreation and entertainment, local transportation, and gifts. Travel transactions between the United States and both Canada and Mexico include border transactions, which often involve short stays, including stays of less than 24 hours.

U.S. receipts for travel increased 5 percent in 1995, to \$61.1 billion, following a 1-percent increase in 1994. The increase in 1995 was more than accounted for by an increase in receipts from travelers from overseas, which partly reflected continued depreciation of the dollar against many foreign currencies; one-half of the increase in overseas receipts was accounted for by the Asian and Pacific area. Receipts from Canada were down 1 percent in 1995, following a 16-percent decrease in 1994. Receipts from Mexico decreased 41 percent, as the sharp decline in the value of the peso at yearend 1994 and a weak Mexican economy throughout much of 1995 severely restrained Mexican expenditures in the United States.

U.S. payments for travel increased 5 percent in 1995, to \$45.9 billion, following an 8-percent increase in 1994. This deceleration largely reflected a falloff in payments for overseas travel—to 5 percent in 1995 from 8 percent in 1994. U.S. payments to Canada increased 10 percent in 1995, following a 6-percent increase in 1994. U.S. payments to Mexico decreased slightly, following a 3-percent increase.

*Passenger fares.*—This category covers fares paid by residents of one country to vessel and airline operators resident in another country. Exports consist of fares received by U.S. operators for transporting foreign residents between the United States and a foreign country and between foreign countries.

Imports consist of fares paid to foreign operators by U.S. residents for travel to and from the United States.

U.S. passenger fare receipts increased 8 percent in 1995, to \$18.5 billion, following a 3-percent increase in 1994. The acceleration largely reflected a step-up in travel from Central and South America and from Japan. U.S. passenger fare payments increased 11 percent, to \$14.3 billion, in 1995, following a 14-percent increase in 1994. The 1995 increase reflected a rise in travel to the United Kingdom and to the Far East.

*Other transportation.*—This category primarily covers transactions for freight and port services arising from the transportation of goods by ocean, air, and truck to and from the United States. Freight receipts of U.S. carriers arise from transportation of U.S. goods exports and from the transportation of goods between two foreign points; freight payments to foreign carriers arise from the transportation of U.S. goods imports.<sup>4</sup> Port services receipts are the value of the goods and services procured by foreign carriers in both U.S. ocean and air ports; port services payments are the value of the goods and services procured by U.S. carriers in foreign ocean and air ports.

4. By balance-of-payments accounting convention, the importer assumes ownership of the goods and bears all subsequent costs of transportation when the goods cross the border of the exporting country. Thus, receipts of U.S. carriers for transporting U.S. imports are excluded from U.S. transportation receipts because by this convention, they represent transactions between U.S. residents (that is, U.S. importers and U.S. vessel and airline operators). Similarly, revenues of foreign carriers for transporting U.S. exports are excluded from U.S. payments because they represent transactions between foreign importers and foreign carriers.

## Data Sources

Most of the estimates in this article are based on surveys conducted by BEA. For some services, however, the estimates are based on a variety of other sources, including surveys conducted by other Government agencies, data provided by private sources, customs data, and data obtained from partner countries. BEA's surveys of cross-border transactions with unaffiliated foreigners cover the following six categories of services, each of which is covered by a separate survey or by a group of surveys: (1) Selected services (mainly miscellaneous business, professional, and technical services), (2) construction, engineering, architectural, and mining services, (3) insurance, (4) financial services, (5) royalties and license fees, and (6) transportation. For transportation, four surveys are conducted, differentiated by mode of transport and by residency of carrier. BEA is preparing a publication that describes the methodologies for these surveys and that will be available in the first half of 1997. Data on cross-border transactions

with affiliated foreigners and on sales by majority-owned affiliates are collected in BEA's surveys of U.S. direct investment abroad and of foreign direct investment in the United States; the methodologies for these surveys are described in *U.S. Direct Investment Abroad: 1989 Benchmark Survey, Final Results* (Washington, DC: U.S. Government Printing Office, 1992) and in *Foreign Direct Investment in the United States: 1992 Benchmark Survey, Final Results* (Washington, DC: U.S. Government Printing Office, 1995).

For information on the methodology for the estimates of cross-border transactions—both affiliated and unaffiliated—and on the balance-of-payments concepts, see *The Balance of Payments of the United States, Concepts, Data Sources, and Estimating Procedures* (Washington DC: U.S. Government Printing Office, 1990). The changes in methodology that have been made since 1990 are described in the June 1990–95 and the July 1996 issues of the SURVEY.

Receipts for "other transportation" increased 9 percent in 1995, to \$28.1 billion, following an 8-percent increase in 1994. Freight receipts increased 11 percent, following a 12-percent increase; these increases reflected strong foreign demand for U.S. products, as U.S. goods exports increased 15 percent in 1995—the second consecutive year of strong growth. Port services receipts also contributed to the pickup, as foreign ocean carriers' expenses in U.S. ports increased nearly 10 percent.

Payments for "other transportation" increased 4 percent in 1995, to \$29.2 billion, following a 6-percent increase in 1994. The increase in 1995 was limited by a leveling off of U.S. imports in the second half of the year. Port expenditures by U.S. airlines in the Asian and Pacific area increased 10 percent, but they were more than offset by an 8-percent drop in ocean freight payments to Japan. This drop was attributable to a 12-percent decrease in U.S. import tonnage from Japan in 1995, following a 14-percent increase in 1994.

*Royalties and license fees.*—This category covers transactions with foreign residents that involve

patented or unpatented techniques, processes, formulas, and other intangible property rights used in the production of goods, as well as transactions involving copyrights, trademarks, franchises, broadcast rights, and other intangible rights.

Receipts of royalties and license fees increased 21 percent in 1995, to \$27.0 billion, following a 10-percent increase in 1994. The large increase in 1995 was attributable to a 23-percent increase in receipts of U.S. parent companies from their foreign affiliates. This increase was largely concentrated in two industries—manufacturing and wholesale trade, mainly from affiliates whose U.S. parents are in the computer industry—and in two areas—in Europe and in Asia and Pacific. Royalties and license fees received from unaffiliated foreigners increased 10 percent in 1995, reflecting a 9-percent increase in fees for the use of industrial processes.

Payments for royalties and license fees increased 14 percent in 1995, to \$6.3 billion, close to the rate of increase in 1994. However, there were large divergent movements within this category. Payments to affiliated foreigners surged, largely reflecting a 32-percent increase in payments by U.S.

### Improved Estimates of Unaffiliated Financial Services

This year, BEA completed an initiative to improve the coverage of financial services transactions. The improved estimates are based on BEA's first quinquennial Benchmark Survey of Financial Services Transactions Between U.S. Financial Service Providers and Unaffiliated Foreign Persons. This survey, which covers 1994, provides more complete coverage of financial services transactions: It collects data on many types of financial services that were not covered in other surveys, and it provides data that permits BEA to more accurately estimate many other types of financial services.

The services newly covered are financial management, advisory, and custody services; credit card services; securities lending services; foreign exchange brokerage services; payments for credit-related services; and several other miscellaneous services.

The services previously estimated for which survey-based data are now available include explicit fees paid and received for trading in outstanding stocks, private securities placements, and underwriting services; and fees received for credit-related services (such as standby letters of credit), and for futures traded on U.S. exchanges. Fees paid and received for trading in outstanding bonds are not covered in the benchmark survey and will continue to be estimated by BEA.

The survey results and discussions with market participants have greatly increased BEA's understanding of current market practices. The survey and discussions showed that there was duplication in the coverage of transactions between unaffiliated and affiliated foreigners because a much larger share of transactions takes place

through affiliated networks than was earlier recognized; these transactions were already included in BEA's quarterly and annual direct investment surveys. In addition, the survey results indicated that transactions were increasingly at wholesale, rather than at retail, fee rates and sometimes even at below-wholesale-fee rates. The previous methods of estimation made some, but insufficient, allowance for these pricing differences.

Estimates based on the survey results, combined with the refined understanding of market practices, led to the significant revisions shown below. The revisions were carried back to 1992; source data and assumptions do not permit reliable estimation before that year. Next year, the estimates will incorporate the annual survey results for 1995 and 1996.

Estimates of Unaffiliated Financial Services, 1994  
[Millions of dollars]

Financial services receipts:	
Revised.....	5,626
Changes due to improved estimates.....	-1,336
Previous.....	6,962
Financial services payments:	
Revised.....	1,611
Changes due to improved estimates.....	-5,224
Previous.....	6,835

For a more detailed analysis of the improved and previous methodologies and estimates, see "U.S. International Transactions, Revised Estimates for 1986–95" in the July 1996 SURVEY OF CURRENT BUSINESS.

affiliates to their foreign parent companies. In contrast, payments to unaffiliated foreigners decreased 32 percent in 1995, partly because payments for broadcast rights and corporate sponsorships associated with the Winter Olympics in Norway and the World Cup soccer tournament in the United States pushed payments to an unusually high level in 1994.

*Other private services.*—This category consists of a variety of private services—education, financial, insurance, telecommunications, business, professional, technical, and other affiliated and unaffiliated services.

Receipts for “other private services” increased 4 percent in 1995, to \$61.7 billion, following an 11-percent increase in 1994. Affiliated services receipts increased 7 percent, to \$19.5 billion, primarily reflecting increased receipts by U.S. affiliates from their foreign parents. Unaffiliated services receipts increased 3 percent, to \$42.3 billion, reflecting modest increases across most services categories.

Payments for “other private services” increased 10 percent in 1995, to \$34.0 billion, following an 11-percent increase in 1994. Payments to affiliated foreigners increased 17 percent; the increase was distributed evenly between U.S. parents’ and U.S. affiliates’ transactions. Payments to unaffiliated foreigners increased 5 percent, approximately one-half the rate of increase in 1994.

“Education” receipts consists largely of expenditures for tuition and living expenses by foreign students enrolled in U.S. colleges and universities; payments consist of tuition and living expenses of U.S. students for study abroad. Education receipts increased 5 percent in 1995, and payments increased 7 percent.

“Financial services” covers a variety of services, including funds management, credit card services, explicit fees and commissions on transactions in securities, fees on credit-related activities, and other miscellaneous financial services. Implicit fees paid and received on bond trading are also covered. (For additional information, see the box “[Improved Estimates of Unaffiliated Financial Services.](#)”) Receipts for financial services increased 9 percent in 1995, and payments increased 6 percent.

“Insurance” includes premiums received and paid for primary insurance and for reinsurance; losses paid by U.S. insurers and losses recovered from foreign insurers are netted against the premiums. Primary insurance includes life insurance, accident and health insurance, and property and casualty insurance. Each type of primary insurance may be reinsured by the primary insurer; reinsurance is the ceding of a portion of a premium to another insurer, who then assumes a corresponding portion of the risk. Reinsurance is one way of providing coverage for events with so high a degree of risk or liability that a single insurer is unwilling or unable to underwrite insurance against their occurrence. In 1995, net insurance receipts decreased 7 percent. Net insurance payments increased 19 percent, as losses recovered returned to more normal levels, reflecting a general lack of catastrophic events that would have triggered large payments from foreign reinsurers in 1995.

“Telecommunications” includes settlements between U.S. and foreign communications companies for the transmission of messages between the United States and other countries; channel leasing; telex, telegram and other jointly provided (basic) services; and value-added services, such as electronic mail, video conferencing, and support

### Acknowledgments

The estimates of cross-border transactions were prepared by the following staff members of the Balance of Payments and International Investment Divisions.

Travel and passenger fares—Joan Bolyard and Laura Brokenbaugh.

Other transportation—Patricia Watts and Ed Dozier.

Royalties and license fees and other private services—affiliated, Gregory G. Fouch (for transactions of U.S. affiliates) and Mark W. New (for transactions of U.S. parents); unaffiliated, Ralph Kozlow, Shirley J. Davis, Christopher J. Emond, Rafael I. Font, Debra Blagburn, Annette Boyd, Faith Brannam, Hope Jones, Eddie L. Key, Christine Locke-Paddon, Steven Munro, Jennifer Ribarsky, Daniel Thomas, John Sondheimer, and Kimberly Chesley.

The estimates of sales of services by affiliates were prepared by staff members of the International Investment Division. The estimates of sales by foreign affiliates were prepared by the staff of the Annual and Benchmark Section of the Direct Investment Abroad Branch; the estimates of sales by U.S. affiliates were prepared by the staff of the Annual and Benchmark Section of the Foreign Direct Investment in the United States Branch.

John Sondheimer, assisted by Robert Becker, was responsible for consolidating the information contained in tables 1, 2, 3, and 5. Smith W. Allnutt, Peter Bowman, Jane M. Fry-Emond, and Arnold Gilbert established data retrieval systems and were responsible for the computer generation of most of the remaining tables in this article.

services. Receipts for telecommunications services decreased 1 percent in 1995 and payments decreased 2 percent, as the dollar value of settlements related to international long distance telephone traffic was depressed by rate reductions in the United States and abroad.

“Business, professional, and technical services” covers a variety of services, such as computer and data processing and installation, maintenance, and repair of equipment (see [table 1](#)). Receipts for business, professional, and technical services increased 3 percent in 1995; increases in database services, research and development, and construction services were partly offset by a decrease in the installation, maintenance, and repair of equipment. Payments for business, professional, and technical services increased 6 percent.

“Other unaffiliated services” receipts covers a wide variety of services, including expenditures by foreign governments for services related to maintaining embassies and consulates in the United States; expenditures of international organizations headquartered in the United States, such as the United Nations, the International Monetary Fund, and the World Bank; and receipts from unaffiliated foreigners for the sale and rental of U.S. motion picture and television films and tapes. Payments consist primarily of earnings of foreign residents employed temporarily in the United States and of payments by U.S. film distributors to unaffiliated foreign residents for the purchase of motion picture and television films and tapes. Receipts in-

creased 2 percent in 1995, and payments increased 4 percent.

#### *By area*

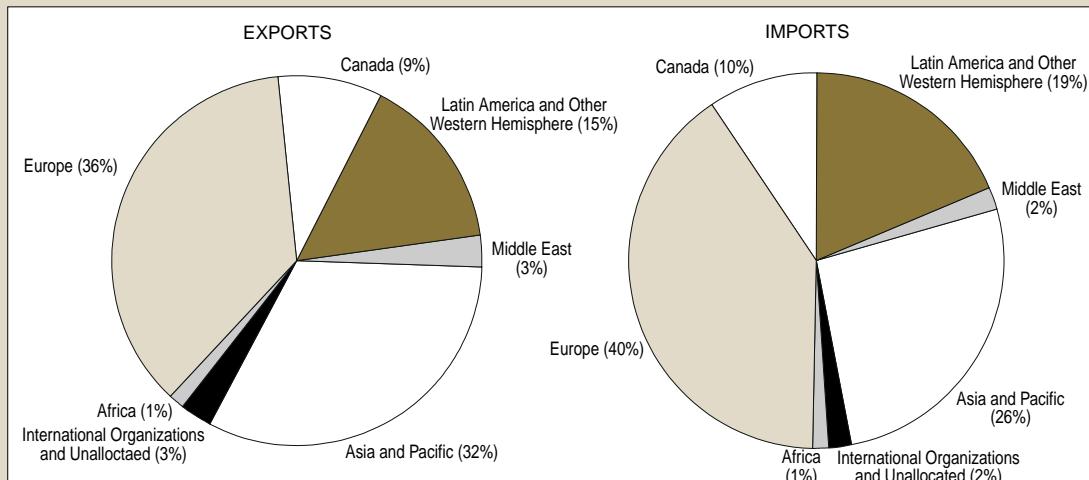

For both exports and imports, the European area and the Asian and Pacific area accounted for more than two-thirds of total U.S. cross-border transactions in private services in 1995 ([chart 4](#)). In addition, most U.S. services transactions are with a relatively small number of countries. For both exports and imports, 12 countries accounted for almost two-thirds of the total transactions in private services ([table B](#)). Moreover, the top six countries accounted for nearly one-half of total exports and more than one-half of total imports of private services.

*Europe.*—This area accounted for 36 percent of exports and 40 percent of imports of private services in 1995. The U.S. services surplus with Europe reached \$19.1 billion. The United Kingdom ranked as the worldwide leader in all the major categories of imports of services except “other transportation.”

European travelers to the United States accounted for 32 percent of total U.S. travel and passenger fare receipts; payments by U.S. travelers to Europe accounted for 41 percent of U.S. travel and passenger fare payments. The United Kingdom and Germany were the two most common destinations for U.S. travelers to Europe, either as a final destination or as a gateway to other overseas destinations.

#### CHART 4

#### U.S. Cross-Border Services Transactions: Share By Area in 1995

For royalties and license fees, receipts from Germany accounted for more than 10 percent of U.S. receipts—second only to those from Japan. The transactions with both Germany and Japan primarily reflected U.S. parents' receipts from their foreign affiliates, which were largely concentrated in the manufacturing industry.

*Asia and Pacific.*—This area accounted for 32 percent of exports and 26 percent of imports of private services in 1995. The U.S. services surplus with this area reached \$29.2 billion, the highest of any area.

Among the countries in this area, Japan was the largest U.S. trading partner in services; it accounted for 16 percent of U.S. exports and for 11 percent of U.S. imports in 1995. The U.S. services surplus with Japan reached \$17.0 billion, the largest surplus with any country; this surplus contrasts sharply with the large goods deficit with Japan. Much of the surplus was attributable to travel; Japanese travelers to the United States accounted for more than 21 percent of total U.S. travel and

passenger fare receipts in 1995. In contrast, U.S. residents traveling to Japan accounted for less than 6 percent of total U.S. travel and passenger fares payments.

In addition, Japan accounted for 19 percent of "other transportation" payments and 20 percent of royalty and license fee receipts in 1995. The high share of "other transportation" payments reflects the large volume of U.S. goods imports from Japan and the relatively large distance between the two countries. The high share of royalty and license fee receipts largely reflected U.S. parent companies' receipts from their foreign affiliates.

*Latin America and Other Western Hemisphere.*—This area accounted for 15 percent of U.S. exports and 19 percent of U.S. imports of private services in 1995. The surplus with the area was \$6.1 billion. Travel and passenger fares dominated the transactions between the United States and Latin America and Other Western Hemisphere, accounting for 56 percent of U.S. exports and 62 percent of U.S. imports with this area. Mexico accounted for nearly 5 percent of U.S. travel exports and more than 12 percent of U.S. travel imports. Within the "other private services" category, 25 percent of U.S. receipts for financial services were accounted for by Latin America and Other Western Hemisphere. This high percentage was largely attributable to services provided to financial institutions in Caribbean financial centers. Latin America and Other Western Hemisphere accounted for 41 percent of U.S. net insurance payments, primarily to Bermuda, and for 35 percent of U.S. telecommunications payments. The large net payments to Bermuda reflected the premiums paid to reinsurance companies, many of which are located in Bermuda because of favorable tax conditions.

*Canada.*—Canada accounted for 9 percent of U.S. exports and 10 percent of U.S. imports of private services in 1995. The U.S. surplus with Canada reached \$5.6 billion, the next largest surplus after that with Japan. The high level of "other transportation" exports and imports with Canada partly reflects the high volume of goods shipped by truck between the two countries. Exports of "other private services" to Canada exceeded those to any other country; Canada's proximity to the United States may enable U.S. firms to deliver business, professional, and technical services to Canadian markets that in the case of more distant trading partners, could only be delivered through foreign affiliates.

1. Ranked by trade in dollar amounts.

*Other.*—The remaining areas—Africa, the Middle East, and “International organizations and unallocated”—together accounted for 7 percent of U.S. exports and 5 percent of U.S. imports of private services in 1995. Within “other private services,” more than 9 percent of U.S. exports of education services were accounted for by students from Africa and the Middle East who are studying in the United States, and more than 6 percent of U.S. receipts for business, professional, and technical services were accounted for by Saudi Arabia.

### Sales by Affiliates in 1994

In 1994, worldwide sales of services by nonbank majority-owned foreign affiliates of U.S. companies were \$165.6 billion, up 6 percent from 1993 (table 8).<sup>5</sup> However, roughly 70 percent of this increase was accounted for by affiliates that were established or acquired by U.S. direct investors in prior years but were not reported to BEA until data for 1994 were reported in its 1994 Benchmark Survey of U.S. Direct Investment Abroad.<sup>6</sup> Thus, the 6-percent increase of 1994 overstates the actual increase in sales that occurred between 1993 and 1994. If the returns of these affiliates are omitted from the total for 1994, sales in 1994 were up \$2.9 billion, or about 2 percent. Worldwide sales of services by nonbank majority-owned U.S. affiliates of foreign companies were \$153.6 billion, up 7 percent.

Sales of services by affiliates tend to be predominantly local, reflecting the importance of proximity to the customer in the delivery of many services. In 1994, sales in the country of the affiliate (local sales) accounted for 84 percent of worldwide sales of services by foreign affiliates.<sup>7</sup> An additional 9 percent of sales were to other foreign countries. Only 7 percent of sales by foreign affiliates were to U.S. persons, and a majority of these sales were to the U.S. parents of the affiliate making the sale. Partly reflecting the large internal market of the United States, local sales accounted for 94 percent of sales by U.S. affiliates.

Sales by foreign affiliates to foreign persons and sales by U.S. affiliates' to U.S. persons both represent services delivered to international markets through the channel of direct investment. Unlike cross-border transactions, which are generally

classified by type of service, these sales are classified according to the primary industry of the affiliate.<sup>8</sup> These sales are shown by country of affiliate or ultimate beneficial owner (UBO) in table 9.<sup>9</sup> The sales by foreign affiliates in table 10 and by U.S. affiliates in table 11 are shown by industry of affiliate cross-classified by country.

In the discussion in the following two sections, the estimates for 1994 are compared with the estimates for 1993 and for 1989, the earliest year for which comparable data by country and by industry are available for both foreign affiliates and U.S. affiliates.

### Foreign affiliates' sales to foreign persons

In 1994, foreign affiliates' sales to foreign persons were up \$10.9 billion, or 8 percent, to \$153.5 billion. Excluding the returns of affiliates that were established or acquired in prior years but that were first reported to BEA in the 1994 benchmark survey, sales were up \$4.6 billion, or about 3 percent, compared with a 1-percent increase in 1993. Continuing operations of affiliates already in the direct investment universe accounted for a little over one-half of the

8. Although data by type of service would be useful, they are not collected in BEA's direct investment surveys, because of concerns about respondent burden.

9. The UBO of a U.S. affiliate is that person (in the broad legal sense, including a company), proceeding up the affiliate's ownership chain beginning with and including the foreign parent, that is not owned more than 50 percent by another person. The UBO ultimately owns or controls the U.S. affiliate, and derives the benefits associated with ownership or control. Unlike the foreign parent, the UBO of a U.S. affiliate may be located in the United States.

### Change in Industry Designation

Tables 10 and 11 in this article incorporate a change to an industry designation. The industry that in previous articles in this series was designated “finance, except banking” is now designated “finance, except depository institutions.” The redesignation was made to conform to the 1987 Standard Industrial Classification, in which savings institutions and credit unions, as well as banks, are included in the industry “depository institutions.”

For sales by majority-owned foreign affiliates, the substance of this change is reflected in the data beginning with 1994, but the new term is used in table 10 for both 1993 and 1994 data for convenience and because in 1993, none of these affiliates were classified as nonbank depository institutions (that is, as savings and loan institutions or credit unions).

For sales by majority-owned U.S. affiliates, the substance of the change was already reflected in the data beginning with the 1992 benchmark survey of foreign direct investment in the United States.

For convenience, the terms “bank” and “nonbank” will continue to be used to refer to groups of affiliates (“nonbank U.S. affiliates”).

5. For purposes of this section, sales of services are defined as sales characteristic of the industries listed in the footnote to table 8.

6. Most of the added affiliates were established or acquired in the 4 years that followed the previous benchmark survey—which covered 1989—rather than in 1994, but these affiliates were not large enough to be included in BEA's annual sample surveys.

7. For foreign affiliates, local sales are a significantly higher share of total sales of services than of goods. In 1994, the share for goods was 65 percent.

1994 increase, and the rest was accounted for by affiliates that were established or acquired in 1994.

By area, almost all of the \$10.9 billion increase in foreign affiliates' sales in 1994 was accounted for by a \$9.2 billion increase in sales by affiliates located in the Asia and Pacific area. The increase in Asia and Pacific reflected strong economic growth in several countries, the entrance of new affiliates into the direct investment universe, and—in the case of Japan—depreciation of the dollar against the yen, which raised the dollar value of yen-denominated sales. By country, the increase was largest for affiliates in Japan, followed by those in New Zealand and Australia.

In the other major areas, sales of services by affiliates grew only slightly or decreased. Despite the effect of dollar depreciation against the European currencies, foreign sales by European affiliates increased only \$0.4 billion in 1994. Sales by affiliates in Canada decreased \$1.3 billion, falling to their lowest level since 1989.

By industry, sales by affiliates classified in the "services" division of the Standard Industrial Classification (sic)—a narrower definition of "services" than that used elsewhere in this article—increased \$8.6 billion, accounting for more than three-fourths of the total increase in foreign affiliate sales.<sup>10</sup> Within "services," affiliates whose primary industry was the provision of computer and data processing services had the largest increase, much of it due to the entrance of new affiliates into the direct investment universe. The largest decrease in sales—\$2.9 billion—was in wholesale trade and was almost entirely accounted for by wholesalers of "professional and commercial equipment and supplies."

*By area.*—Affiliates in Europe had the largest share of foreign affiliates' sales of services to foreigners in 1994, accounting for 52 percent of the total. This share has drifted downward slightly since 1989. Within Europe, affiliates in the United Kingdom, Germany, France, and the Netherlands accounted for the largest shares of sales.

Affiliates in Asia and Pacific had the next largest share, 25 percent, up from 20 percent in 1989. Affiliates in Japan accounted for nearly one-half of the sales within Asia and Pacific.

The share of affiliates in Canada was 11 percent, down from 16 percent in 1989. This decline proba-

bly reflects relatively sluggish economic conditions in Canada during this period.

Affiliates in Latin America and Other Western Hemisphere had an 8-percent share. Affiliates in the "Other" area—Africa, Middle East, and International—had a 3-percent share.

*By industry.*—Affiliates classified in "services" had the most sales of services to foreigners in 1994 and accounted for 36 percent of the total, up from 30 percent in 1989. Within "services," sales were largest in computer and data processing and in "other" services (mainly personnel supply and other miscellaneous business services).

Sales were next largest by affiliates in insurance, which accounted for 20 percent of the total, up from 18 percent in 1989. By type of insurer, sales were largest for property and casualty insurers, followed by life insurers and by accident and health insurers.

Also large were sales of services by affiliates in "other industries"—11 percent of total sales, up from 7 percent in 1989—and by affiliates in finance, except depository institutions. Most of the sales in "other industries" were in transportation; the rest were mainly in public utilities and communications.

#### *U.S. affiliates' sales to U.S. persons*

In 1994, sales of services by U.S. affiliates of foreign companies to U.S. persons were up 7 percent, to \$144.4 billion, following a 5-percent increase in 1993. From 1989 to 1992, the growth in sales averaged 11 percent a year, reflecting, at least to some extent, the rapid growth of foreign direct investment in the United States during the late 1980's.

About one-fifth of the increase in 1994 was accounted for by the entrance of affiliates into the direct investment universe, rather than by continuing operations of affiliates already in the universe.

By area, affiliates with UBO's in Europe had the largest increase in sales, \$7.4 billion, most of which was accounted for by insurance affiliates. Affiliates with UBO's in Asia and Pacific had the next largest increase—\$2.9 billion. Sales by affiliates with UBO's in Canada decreased \$1.0 billion.

By industry, sales by affiliates in "services" had the largest increase—\$4.9 billion, more than half of the total increase. Sales by affiliates in insurance increased \$4.3 billion. Sales by affiliates in real estate had the largest decrease—\$1.1 billion.

*By area.*—Affiliates with UBO's in Europe accounted for the largest share of U.S. affiliates' total

10. The "services" category of the sic is dominated by business services, such as advertising, accounting, and computer and data processing services. It also includes hotel, health, and motion picture services. For a more complete list, see the group "services" in tables 10 and 11.

sales of services to U.S. persons in 1994. These affiliates accounted for 59 percent of the total, down slightly from 1989. Within Europe, affiliates with UBO's in the United Kingdom, Switzerland, France, and Germany accounted for the largest shares of sales.

Affiliates with UBO's in Asia and Pacific (primarily in Japan) had the next largest share of sales—21 percent, up from 14 percent in 1989—followed by affiliates with UBO's in Canada (16 percent), Latin America and Other Western Hemisphere (3 per-

cent) and “Other” (Africa, Middle East, and United States) (2 percent). Japan and Canada each had a 16-percent share in 1994. For Japanese-owned affiliates, the share doubled from 8 percent in 1989; in contrast, for Canadian-owned affiliates, the share was down from 20 percent in 1989. The gain in the share of Japanese-owned affiliates reflects the rapid growth in Japanese investment in the United States during this period.

*By industry.*—Affiliates in insurance had the largest sales to U.S. persons in 1994, accounting for 34 percent of the total, down slightly from 1989. A little more than one-half of the sales by affiliates in insurance were by affiliates with UBO's in the United Kingdom and Canada. By type of insurer, sales by property and casualty insurers—primarily those with UBO's in the United Kingdom, Switzerland, and Germany—accounted for nearly one-half of the total. Most of the remaining sales were by life insurers—primarily those with UBO's in Canada and France.

Affiliates classified in “services” had the next largest sales to U.S. persons, accounting for 27 percent of the total, up from 22 percent in 1989. Within “services,” sales were largest in “other” services (mainly personnel supply and other miscellaneous business services), in motion pictures, and in hotels and other lodging places.

Tables 1–11 follow. 

#### Data Availability

Estimates for cross-border transactions for 1986–95 and transactions by majority-owned affiliates for 1989–94 are available on STAT-USA's National Trade Data Bank CD-ROM, by subscription to STAT-USA's online statistical services, and on diskette from BEA. For years before 1992, the estimates do not reflect the expanded country detail available for later years.

To order the CD-ROM or to subscribe to STAT-USA's online services, call (202) 482–1986. To order the diskette, send a check or money order for \$20.00 payable to “Bureau of Economic Analysis” to the Public Information Office, Order Desk, BE-53, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230. For further information or to order using MasterCard or Visa, call (202) 606–9545. When ordering, please specify accession number 58–93–40–501.

Eastern Europe <sup>3</sup> .....	345	478	509	583	799	1,055	1,412	1,520	1,944	2,029

1. Prior to 1990, this line includes data only for the Federal Republic of Germany. Beginning in 1990, this line also includes the former German Democratic Republic.

2. The European Union comprises Belgium, Denmark, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, United Kingdom, Austria, Finland, and Sweden. The last three countries joined the Union on January 1, 1995. The estimates prior to 1995 do not reflect the addition of these three countries.

3. Eastern Europe comprises Albania, Armenia, Azerbaijan, Belarus, Bulgaria, Czech Republic, Estonia, Georgia, Hungary, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Moldova, Poland, Romania, Russia, Slovakia, Tajikistan, Turkmenistan, Ukraine, and Uzbekistan.

NOTE.—The full country and area detail shown in the stub is available only since 1992.

\* Less than \$500,000.

<sup>D</sup> Suppressed to avoid disclosure of data of individual companies.

1. Receipts for engineering, architectural, construction, and mining services are published net of exports of goods, which are included in trade in goods in the U.S. international transactions accounts, and net of outlays abroad for wages, services, materials, and other expenses. In 1992, net receipts were \$1,935 million, derived as gross operating revenues of \$3,221 million less exports of goods of \$369 million and foreign expenses of \$918 million.

Payments for engineering, architectural, construction, and mining services are not published net of imports of goods and outlays for wages and other expenses. Data are not collected for imports of goods and for wages and other expenses, and no estimates are made because they are believed to be small.

2. See table 1 for details.

3. See footnote 2, table 2.

4. See footnote 3, table 2.

\* Less than \$500,000.

<sup>D</sup> Suppressed to avoid disclosure of data of individual companies.

1. Receipts for engineering, architectural, construction, and mining services are published net of exports of goods, which are included in trade in goods in the U.S. international transactions accounts, and net of outlays abroad for wages, services, materials, and other expenses. In 1994, net receipts were \$2,461 million, derived as gross operating revenues of \$4,829 million less exports of goods of \$692 million and foreign expenses of \$1,676 million.

Payments for engineering, architectural, construction, and mining services are not published net of imports of goods and outlays for wages and other expenses. Data are not collected for imports of goods and for wages and other expenses, and no estimates are made because they are believed to be small.

2. See table 1 for details.

3. See footnote 2, table 2.

4. See footnote 3, table 2.

NOTE.—Sales of services in this table are those characteristic of the following industries: Industries in the "services" division of the Standard Industrial Classification; finance (except depository institutions), insurance, and real estate; agricultural, mining, and petroleum services; and transpor-

tation, communication and public utilities. The exclusion of depository institutions reflects the exclusion from the data set generally, not a judgment that they do not belong to a services industry.

<sup>\*</sup> Less than \$500,000.<sup>D</sup> Suppressed to avoid disclosure of data of individual companies.

1. For MOFA's, "country" is the country of the affiliate; for MOUSA's, it is the country of the affiliate's ultimate beneficial owner.

2. Foreign affiliates classified in "International" are those that have operations in more than one country and that are engaged in petroleum shipping, other water transportation, or operating movable oil- and gas-drilling equipment.

3. Contains data for U.S. affiliates that have a foreign parent but whose ultimate beneficial owner is a U.S. person.

4. See footnote 3, table 2.

5. See footnote 4, table 2.

MOFA Majority-owned foreign affiliate

MOUSA Majority-owned U.S. affiliate
