15. Improved Estimates of the National Income and Product Accounts for 1959-98: Results of the Comprehensive Revision

On October 28, 1999, BEA released revised NIPA estimates beginning with 1959 that reflected the incorporation of major definitional and statistical improvements that are designed to better measure the evolving U.S. economy. This article describes the revisions to GDP and to other major NIPA aggregates and components, and it identifies the principal sources of these revisions. For example, according to the revised estimates, real GDP grew faster than previously estimated; the faster growth rate was primarily attributable to a definitional change that recognized software as investment and to statistical changes to the price estimates.

Regular features

1. Business Situation

Real GDP increased 5.5 percent in the third quarter of 1999, according to the "preliminary" estimate; the "advance" estimate issued last month had shown a 4.8-percent increase. The price index for gross domestic purchases increased 1.7 percent, 0.1 percentage point more than the previously published increase. Corporate profits increased \$8.2 billion (or 0.9 percent at a quarterly rate) in the third quarter. The Federal Government current surplus increased \$16.6 billion, to \$134.7 billion, in the third quarter, and the State and local government surplus increased \$10.7 billion, to \$48.3 billion.

LOOKING AHEAD

Annual Input-Output Accounts of the U.S. Economy. The 1996 annual input-output (I-O) accounts will be presented in the January 2000 SURVEY and will be available on BEA's Web site on December 20, 1999. These accounts present a detailed picture of how 97 industries and commodities interact to provide input to, and take output from, each other. The 1996 I-O estimates are based on conventions that are consistent with the 1992 benchmark I-O accounts and with the definitional and statistical changes that were introduced in the recently released comprehensive revision of the NIPA's.

BUSINESS SITUATION

This article was prepared by Larry R. Moran, Daniel Larkins, Ralph W. Morris, Deborah Y. Sieff, and Kurt S. Bersani.

REAL GROSS domestic product (GDP) increased 5.5 percent in the third quarter of 1999, according to the "preliminary" estimates of the national income and product accounts (NIPA's), after increasing 1.9 percent in the second quarter (table 1 and chart 1); the "advance" third-quarter estimate of real GDP, reported in the November SURVEY OF CURRENT BUSINESS, had shown a 4.8-percent increase.¹ The upward revision to real GDP primarily reflected a downward

revision to imports, which are subtracted in the calculation of GDP, and upward revisions to private nonfarm inventory investment, to consumer spending for services, and to State and local government spending; these revisions were partly offset by a downward revision to private investment in equipment and software. Real final sales of domestic product and real gross domestic purchases were each revised up less than GDP.

1. Quarterly estimates in the NIPA's are expressed at seasonally adjusted annual rates. Quarter-to-quarter dollar changes are the differences between the published estimates. Quarter-to-quarter percent changes are annualized and are calculated from unrounded data unless otherwise specified.

Real estimates are calculated using a chain-type Fisher formula with annual weights for all years and for all quarters except those for the most recent year, which are calculated using quarterly weights; real estimates are expressed both as index numbers (1996=100) and as chained (1996) dollars. Price indexes (1996=100) are also calculated using a chain-type Fisher formula.

State and local	995.8	5.5	19.3	2.2	10.7	2.3	8.2	.9	4.4
Addendum: Final sales of domestic product	8,856.6	128.7	96.9	72.7	98.7	6.2	4.6	3.4	4.6

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates usually are not additive. Chained (1996) dollar levels and residuals, which measure the extent of nonadditivity in each table, are in NIPA tables 1.2, 1.4, and 1.6. Percent changes are calculated from unrounded data. Percent changes in major aggregates are in NIPA table S.1.

CHART 1

Real Gross Domestic Product

CONTRIBUTIONS TO 5.5-PERCENT INCREASE IN REAL GDP IN 1999:III

(The sources of the revisions are discussed in the section "Revisions.")

The picture of the economy in the third quarter that is shown by the preliminary estimates is similar to that shown by the advance estimates. Like the advance estimates, the preliminary estimates showed the following:

- The third-quarter increase in real GDP—at 5.5 percent—was well above the 3.5-percent average annual growth rate for real GDP over the current expansion, which began in the second quarter of 1991.
- The sharp third-quarter acceleration was primarily accounted for by an upturn in private nonfarm inventory investment and by accelerations in exports of goods and in private nonresidential investment in equipment and software. These changes were partly offset by a downturn in private residential investment and a small slowdown in consumer spending.
- Real final sales of domestic product accelerated less than GDP, as private inventory investment—which is excluded from final sales of domestic product—increased after decreasing in the second quarter.²
- Real gross domestic purchases accelerated less than GDP, as exports—which are

2. Final sales of domestic product is calculated as GDP less change in private inventories.

Table 2.—Contributions to Percent Change in Real Gross Domestic Product

State and local28	.90	.10	.51

NOTE.—NIPA table 8.2 also shows contributions for 1998:II and 1998:III.

excluded from gross domestic purchases—accelerated sharply.³

- The largest contributors to the third-quarter increase in real GDP were consumer spending, private investment in equipment and software, exports of goods and services, and private nonfarm inventory investment (table 2 and chart 1). The increase in GDP was moderated by an increase in imports.

The price index for gross domestic purchases increased 1.7 percent in the third quarter after increasing 1.9 percent in the second (table 3). In the third quarter, a deceleration in energy prices more than offset an acceleration in food prices. The price index for gross domestic purchases excluding the prices of food and energy—food and energy prices are normally more volatile than many other prices—increased 1.2 percent in the third quarter, the same as in the second. GDP prices increased 1.1 percent after increasing 1.3 percent.

Real disposable personal income (DPI) increased 2.7 percent in the third quarter after increasing 3.2 percent in the second. The personal saving rate—personal saving as a percentage of current-

3. Gross domestic purchases—a measure of purchases by U.S. residents regardless of where the purchased goods and services were produced—is calculated as the sum of personal consumption expenditures, gross private domestic investment, and government consumption expenditures and gross investment.

Table 3.—Percent Changes in Prices

1. Consists of gasoline, fuel oil, and other energy goods and of electricity and gas.

NOTE.—Percent changes in major aggregates are in NIPA table 8.1. Index number levels are in tables 7.1, 7.2, and 7.4.

dollar DPI—continued its downtrend, decreasing to 2.1 percent from 2.5 percent; the third-quarter rate is the lowest since 1959, the first year for which quarterly estimates are available.⁴

Personal consumption expenditures

Real personal consumption expenditures (PCE) increased 4.6 percent in the third quarter after increasing 5.1 percent in the second (table 4 and chart 2). Although the third-quarter increase was smaller than that in the second quarter, it was larger than the 3.7-percent average annual growth rate over the current expansion. The deceleration was accounted for by slowdowns in durable goods and in services; nondurable goods increased slightly more than in the second quarter.

The deceleration in PCE was consistent with movements in consumer income and in indicators of consumer sentiment (chart 3). Growth in real DPI slowed, and the Index of Consumer Sentiment (prepared by the University of Michigan's Survey Research Center as a measure of consumer attitudes and expectations) declined. In contrast, the unemployment rate decreased to 4.2 percent, its lowest quarterly rate since 1970.

4. As a result of the recently released comprehensive revision of the NIPA's, the personal saving rate is higher for all periods than was previously indicated, the higher rate reflects both definitional changes and inclusion of new source data. For information about the definitional changes, see "A Preview of the 1999 Comprehensive Revision of the National Income and Product Accounts" on page 7 of the August 1999 SURVEY.

Other	889.0	6.5	9.1	18.1	8.2	3.4	5.6	9.5	5.7

NOTE.—See note to table 1 for an explanation of chained (1996) dollar series. Chained (1996) dollar levels and residuals are in NIPA tables 2.3 and 8.9B (motor vehicles). Percent changes in major aggregates are in NIPA table S.1.

Expenditures for durable goods increased 7.7 percent after increasing 9.1 percent. The deceleration was more than accounted for by a slowdown in motor vehicles and parts, which reflected a downturn in new autos. Furniture and household equipment and "other" durable goods increased a little more than in the second quarter.⁵

Expenditures for services increased 4.5 percent after increasing 5.2 percent. The slowdown was more than accounted for by a slowdown in "other" services, which largely reflected a downturn in brokerage commissions.⁶ In contrast, housing, household operation, transportation, and medical care increased slightly more than in the second quarter.

5. "Other" durable goods includes jewelry and watches, ophthalmic products and orthopedic equipment, books and maps, bicycles and motorcycles, guns and sporting equipment, photographic equipment, boats, and pleasure aircraft.

6. "Other" services includes personal care, personal business, recreational, net foreign travel, education and research, and religious and welfare activities.

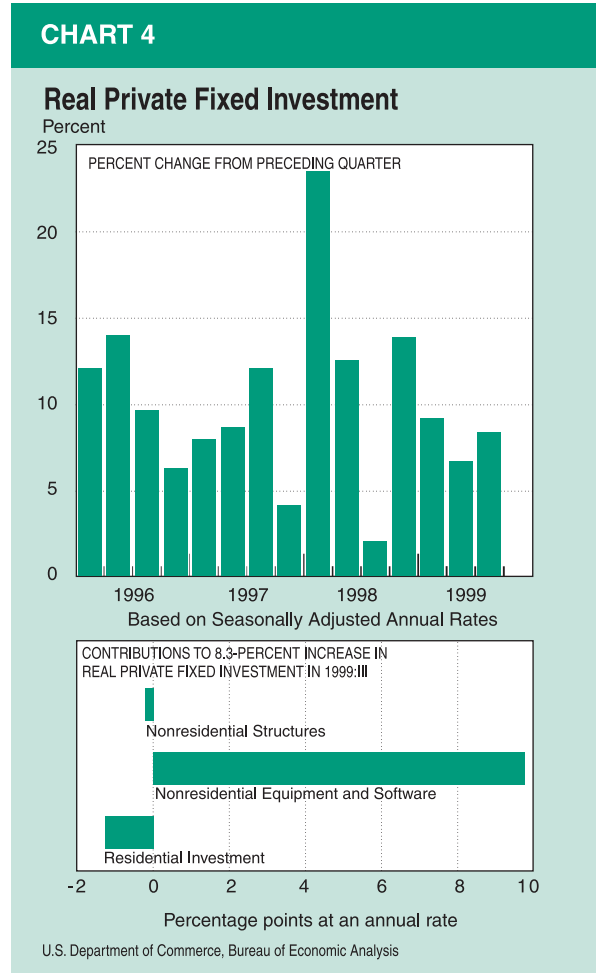

Expenditures for nondurable goods increased 3.5 percent after increasing 3.3 percent. Clothing and shoes and gasoline, fuel oil, and other energy goods increased more than in the second quarter. Food and "other" nondurable goods decelerated.⁷

Private fixed investment

Real gross private domestic fixed investment increased 8.3 percent in the third quarter after increasing 6.6 percent in the second (chart 4). An acceleration in nonresidential fixed investment more than offset a downturn in residential investment.

Nonresidential fixed investment.—Real private nonresidential fixed investment jumped 13.3 percent quarter after increasing 7.0 percent (table 5). The acceleration primarily reflected an acceleration in spending on equipment and software; in

7. "Other" nondurable goods includes tobacco, toilet articles, stationery and writing supplies, toys, film, flowers, cleaning preparations and paper products, and magazines and newspapers.

addition, spending on structures decreased less than in the second quarter.

The third-quarter increase in nonresidential fixed investment was larger than the average increase over the current expansion (8.6 percent), and it occurred despite unfavorable movements in profits, capacity utilization, and interest rates in recent quarters (chart 5). Over the past four quarters, domestic corporate profits increased only 1.8 percent, the capacity utilization rate declined to 80.6 percent from 81.4 percent, and long-term interest rates increased (for example, the yield on high-grade corporate bonds increased to 7.32 percent from 6.32 percent). In contrast, real final sales of domestic product—another factor that affects investment spending—increased 4.2 percent.

Expenditures for equipment and software jumped 18.2 percent after increasing 11.2 percent. The acceleration was accounted for by a sharp acceleration in transportation equipment—mostly reflecting an acceleration in trucks, buses, and trailers and an upturn in aircraft—and by a modest acceleration in industrial equipment. “Other” equipment decreased about as much as in the second quarter, and information processing equipment and software slowed somewhat.⁸ The slowdown in information processing equipment and software was accounted for by communication

equipment; computers and peripheral equipment and software each increased somewhat more than in the second quarter.

Structures decreased 1.5 percent after decreasing 5.3 percent. Mining exploration, shafts, and wells increased more than in the second quarter, nonresidential buildings decreased less, and utilities increased slightly after changing little. In contrast, “other” structures decreased after increasing.⁹

Residential investment.—Real private residential investment decreased 4.8 percent after increasing 5.5 percent (table 5). The downturn was accounted for by “other” residential investment, which turned down, and by single-family structures, which decreased after changing little.¹⁰ Multifamily structures changed little after a small decrease.

“Other” residential investment decreased 2.3 percent after increasing 15.4 percent. The downturn largely reflected a downturn in brokers’ commissions, as sales of new and existing homes decreased 217,000 units (seasonally adjusted annual rate) in the third quarter after increasing 406,000 units in the second. The decrease

9. “Other” structures includes streets, dams and reservoirs, sewer and water facilities, parks, airfields, brokerage commissions on the sale of structures, and net purchases of used structures.

10. “Other” residential investment includes home improvements, new manufactured home sales, brokers’ commissions on home sales, residential equipment, and other residential structures (which consists primarily of dormitories and fraternity and sorority houses.)

8. “Other” equipment includes construction and agricultural equipment, mining and oilfield equipment, electrical equipment not included in other categories, furniture and fixtures, and service-industry machinery.

Other ²	159.3	3.2	2.3	5.6	-9	8.8	6.1	15.4	-2.3

1. Includes new computers and peripheral equipment only.
 2. “Other” residential investment includes home improvements, new manufactured home sales, brokers’ commissions on home sales, residential equipment, and other residential structures (which consists primarily of dormitories and fraternity and sorority houses).

NOTE.—See note to table 1 for an explanation of chained (1996) dollar series. Chained (1996) dollar levels and residuals are in NIPA tables 5.5 and 8.9B (motor vehicles). Percent changes in major aggregates are in NIPA table S.1.

in home sales may have partly reflected an increase in the commitment rate on 30-year fixed-rate mortgages to 7.6 percent from 6.9 percent (chart 6).

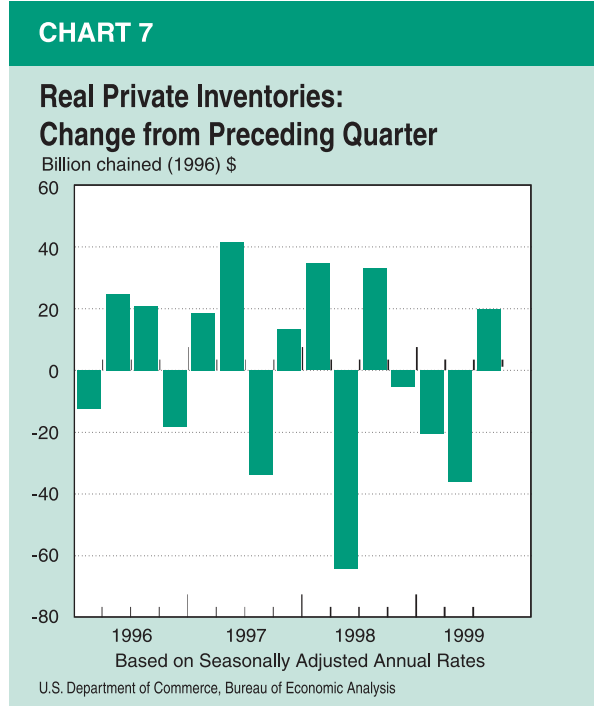

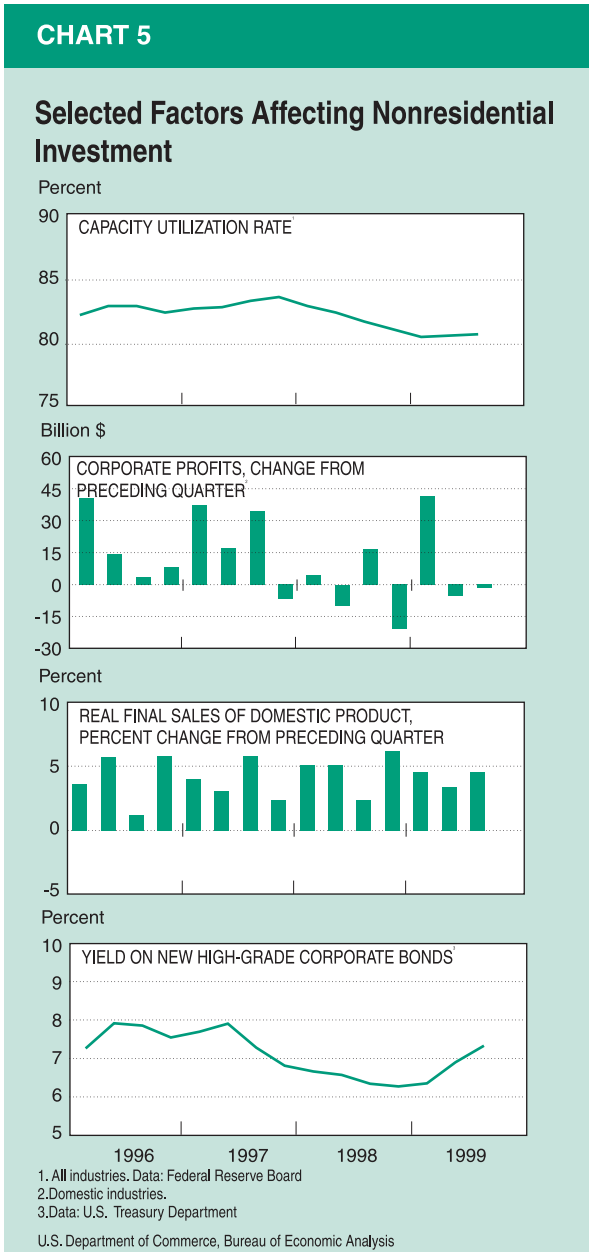

Single-family structures decreased 7.1 percent after decreasing 0.1 percent, and multifamily structures decreased 2.1 percent after decreasing 6.5 percent.

Inventory investment

Real inventory investment—that is, the change in private inventories—increased \$19.9 billion in the third quarter, as inventory accumulation stepped up to \$33.9 billion from \$14.0 billion; inventory investment had decreased \$36.1 billion in

the second quarter (table 6 and chart 7). The third-quarter step-up reflected step-ups in the accumulation of wholesale and retail inventories and a swing from liquidation to accumulation of manufacturing inventories.

Wholesale trade inventories increased \$22.1 billion, about twice as much as in the second quarter. The step-up reflected inventories of nondurable goods; inventories of durable goods increased about as much as in the second quarter.

Retail trade inventories increased \$14.3 billion after increasing \$5.9 billion. Inventories of durable-goods retailers increased \$11.0 billion after increasing \$4.0 billion; the step-up reflected inventories of motor vehicle dealers, which increased \$8.5 billion after no change. Inventories of nondurable-goods retailers increased \$3.5 billion after increasing \$1.9 billion; a downturn in inventories of apparel stores partly offset upturns or step-ups in the inventories of most other retail categories.

Manufacturing inventories increased slightly after decreasing. Inventories of materials and

supplies turned up, and inventories of finished goods increased more than in the second quarter; work-in-process inventories decreased about as much as in the second quarter. Inventories of durable-goods manufacturers increased a little after decreasing; the upturn partly reflected a substantial slowdown in the liquidation of aircraft inventories and swings from liquidation to accumulation of industrial machinery and of instruments. In contrast, inventories of electrical machinery increased less than in the second quarter, and inventories of motor vehicles decreased after increasing. Inventories of

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services.

NOTE.—See note to table 1 for an explanation of chained (1996) dollar series. Chained (1996) dollar levels and residuals are in NIPA table 4.4. Percent changes in major aggregates are in NIPA table S.1.

nondurable-goods manufacturers changed little after a small decrease; an upswing in petroleum inventories more than offset a downswing in chemicals.

“Other” nonfarm inventories were unchanged after increasing.¹¹

Farm inventories decreased \$3.7 billion after increasing \$0.9 billion. Crop inventories decreased after increasing. Livestock inventories decreased about as much as in the second quarter.

In the third quarter, the ratio of real nonfarm inventories to real final sales of domestic businesses decreased to 2.09 from 2.10; over the current expansion, the ratio has fluctuated in the range of 2.07 to 2.17. The inventory-sales ra-

tio that includes only final sales of goods and structures decreased from 3.73 to 3.71, its lowest level in more than 30 years.¹²

Exports and imports

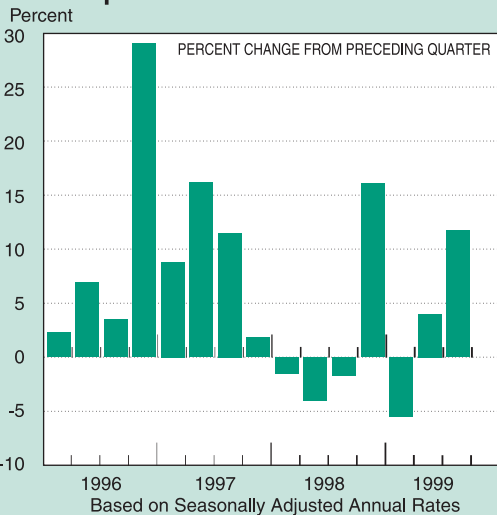

Real exports of goods and services increased 11.7 percent in the third quarter after increasing 4.0 percent in the second (table 7). Real imports of goods and services increased 14.6 percent after increasing 14.4 percent.

11. “Other” nonfarm inventories includes inventories held by the following industries: Mining; construction; public utilities; transportation; communication; finance, insurance, and real estate; and services.

12. Use of the ratio that includes all final sales of domestic businesses in the denominator implies that the production of services results in a demand for inventories that is similar to that generated in the production of goods and structures. In contrast, use of the “goods and structures” ratio implies that the production of services does not generate demand for inventories. Both implications are extreme. Production of some services may require substantial inventories, while production of other services may not.

CHART 8

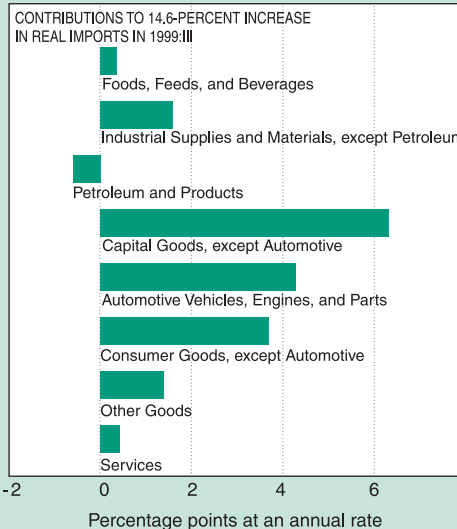

Real Exports

U.S. Department of Commerce, Bureau of Economic Analysis

CHART 9

Real Imports

U.S. Department of Commerce, Bureau of Economic Analysis

Real exports of goods increased 15.8 percent after increasing 4.3 percent (chart 8). The acceleration was more than accounted for by nonautomotive capital goods. Exports of services increased 2.7 percent after increasing 3.2 percent; the slowdown primarily reflected a slowdown in passenger fares and a downturn in "other" private services.¹³

Real imports of goods increased 17.2 percent after increasing 15.5 percent (chart 9). The step-up was more than accounted for by automotive vehicles, engines, and parts and by nonautomotive consumer goods. In contrast, petroleum and products turned down. Imports of services increased 1.7 percent after increasing 8.9 percent; the slowdown was primarily accounted for by a slowdown in "other" private services and by a downturn in travel.¹⁴

Government spending

Real government consumption expenditures and gross investment increased 4.2 percent in the third quarter after increasing 1.3 percent in the second (table 8 and chart 10). Spending by the Federal Government and by State and local governments both increased more than in the second quarter.

Federal defense spending increased 11.4 percent after decreasing 2.6 percent. Consumption spending turned up, largely reflecting upturns for research and development, for personnel support, and for installation support. Investment spending decreased slightly after increasing sharply;

equipment and software was unchanged after increasing, and structures decreased more than in the second quarter.

Federal nondefense spending decreased 8.1 percent after increasing 10.9 percent. Consumption

Addenda:					
Final sales of domestic product	5.2	5.8	.6	10.1
Gross domestic purchases price index	1.6	1.7	.1
GDP price index	1.0	1.1	.1

NOTE.—The preliminary estimates for the third quarter of 1999 incorporate the following revised or additional major source data that were not available when the advance estimates were prepared.

Personal consumption expenditures: Retail sales for August and September (revised), consumers' share of new-car purchases for September, average unit value for domestic new autos for September (revised), and consumers' share of new-truck purchases for September.

Nonresidential fixed investment: Construction put in place for July and August (revised) and September, manufacturers' shipments of machinery and equipment for August (revised) and September, and exports and imports of machinery and equipment for August (revised) and September.

Residential fixed investment: Construction put in place for July and August (revised) and September.

Change in private inventories: Manufacturing, retail trade, and wholesale trade inventories for July and August (revised) and September.

Exports and imports of goods and services: Exports and imports of goods for August (revised) and September.

Government consumption expenditures and gross investment: Monthly Treasury Statement detailed data for September, Department of Defense detailed financial report for the quarter, and State and local government construction put in place for July and August (revised) and September.

Wages and salaries: Employment, average hourly earnings, and average weekly hours for August and September (revised).

GDP prices: Detailed merchandise export and import price indexes for July through September (revised), unit-value index for petroleum imports for August (revised) and September, and housing prices for the third quarter.

Revisions

The 0.7-percentage-point difference between the preliminary estimate of a 5.5-percent increase in real GDP in the third quarter and the advance estimate of a 4.8-percent increase is slightly larger than the average revision of 0.5 percentage point (without regard to sign) from the advance estimate to the preliminary estimate in 1978–98 (table 9).

As noted earlier, the upward revision was primarily accounted for by a downward revision to imports and by upward revisions to private nonfarm inventory investment, to consumer spending for services, and to State and local government spending; these revisions were partly offset by an downward revision to private investment in equipment and software.

The downward revision to imports mainly reflected the incorporation of newly available Census Bureau data on international trade in goods for September. For the advance estimate, BEA had assumed that goods imports would increase about 0.8 percent in September (monthly rate), but newly available data indicated a decrease of 0.1 percent.

The upward revision to private nonfarm inventory investment was more than accounted for by an upward revision to merchant wholesale inventories, which reflected the incorporation of revised Census Bureau data on inventories for August and newly available data for September.

The upward revision to PCE for services was primarily to medical care and to brokerage commissions. Medical care reflected the incorporation of data from the Bureau of Labor Statistics employment cost index, which is one of the indicators for hospital expenses; brokerage commissions reflected the incorporation of newly available Security and Exchange Commission data on exchange volume.

The upward revision to State and local government spending was primarily to investment in buildings and reflected the incorporation of revised Census Bureau data on the value of construction put in place for July and August and newly available data for September.

The downward revision to private investment in equipment and software was primarily to computers and peripheral equipment and to aircraft. It reflected the incorporation of revised Census Bureau data on shipments for July and August and newly available data on shipments and on imports of computers for September.

The preliminary estimates of the increases in the price indexes for gross domestic purchases (1.7 percent) and for GDP (1.1 percent) were 0.1 percentage point higher than the advance estimates.

The preliminary estimate of the increase in real disposable personal income (DPI) was 2.7 percent, 0.2 percentage point higher than the advance estimate, and that of the increase in current-dollar DPI was 4.6 percent, 0.1 percentage point higher. The preliminary estimate of the personal saving rate was 2.1 percent, the same as the advance estimate.

Corporate Profits

Profits from current production increased \$8.2 billion (or 0.9 percent at a quarterly rate) in the third quarter after decreasing \$6.5 billion (0.7 percent) in the second (table 10).¹⁵ Third-quarter profits were reduced by about \$8 billion as a result of Hurricane Floyd, which made landfall in North Carolina in mid-September; benefits paid by insurance companies reduced profits by about

\$6 billion, and uninsured losses reduced profits by about \$2 billion.

Profits of domestic nonfinancial corporations decreased \$2.1 billion (0.4 percent) after increasing \$2.2 billion (0.4 percent); unit profits decreased, reflecting increased unit costs and unchanged unit prices. Profits of domestic financial corporations increased \$0.6 billion (0.4 percent) after decreasing \$7.8 billion (4.2 percent). Profits from the rest of the world increased \$9.8 billion (9.4 percent) after decreasing \$1.0 billion (0.9 percent); payments by U.S. affiliates of earnings to their foreign parents increased less than in the second quarter, and receipts of earnings from foreign affiliates increased more.¹⁶

Cash flow from current production, a profits-related measure of internally generated funds available for investment, increased \$16.0 billion after decreasing \$6.7 billion.¹⁷ The ratio of cash flow to nonresidential fixed investment, an indicator of the share of the current level of investment that could be financed by internally

15. Profits from current production is estimated as the sum of profits before tax, the inventory valuation adjustment, and the capital consumption adjustment; it is shown in NIPA tables 1.9, 1.14, 1.16, and 6.16C as corporate profits with inventory valuation and capital consumption adjustments. Percent changes in profits are shown at quarterly, not annual, rates.

16. Profits from the rest of the world is calculated as (1) receipts by U.S. residents of earnings from their foreign affiliates plus dividends received by U.S. residents from unaffiliated foreign corporations minus (2) payments by U.S. affiliates of earnings to their foreign parents plus dividends paid by U.S. corporations to unaffiliated foreign residents. These estimates include capital consumption adjustments (but not inventory valuation adjustments) and are derived from BEA's international transactions accounts.

17. Cash flow from current production is undistributed profits with inventory valuation and capital consumption adjustments plus the consumption of fixed capital.

IVA Inventory valuation adjustment

generated funds, decreased from 79.3 percent to 78.5 percent, its lowest level since 1990; the ratio's average level for 1990–98 was 84.9 percent.

Domestic industry profits and related measures.—Domestic industry profits decreased \$0.7 billion after decreasing \$8.2 billion.¹⁸ Profits of domestic nonfinancial corporations decreased \$2.4 billion after decreasing \$1.3 billion. Profits of retail trade, wholesale trade, and manufacturing decreased, and profits of the transportation and utility group increased. Profits of domestic financial corporations increased \$1.7 billion after decreasing \$7.0 billion.

Profits before tax (PBT) increased \$22.0 billion after increasing \$17.7 billion. The difference between the \$22.0 billion increase in PBT and the \$8.2 billion increase in profits from current production mainly reflected a larger negative level of the inventory valuation adjustment (IVA). The IVA removes inventory profits and losses from business income.¹⁹ In the third quarter, inventory profits amounted to \$26.5 billion, up from \$13.6 billion in the second quarter.

Government Sector

The combined current surplus of the Federal Government and of State and local governments—the NIPA measure of net saving by government—increased \$27.3 billion, to \$183.0 billion, in the third quarter after increasing \$9.4 billion in the second (table 11).²⁰ The acceleration was more than accounted for by an upturn in the State and local government current surplus; the Federal Government current surplus decelerated.²¹

18. Domestic industry profits are estimated as the sum of corporate profits before tax and the inventory valuation adjustment; they are shown in NIPA table 6.16c. Estimates of the capital consumption adjustment do not exist at a detailed industry level; they are available only for total financial and total nonfinancial industries.

19. As prices change, companies that value inventory withdrawals at original acquisition (historical) costs may realize inventory profits or losses. Inventory profits—a capital-gains-like element in profits—result from an increase in inventory prices, and inventory losses—a capital-loss-like element in profits—result from a decrease in inventory prices. In the NIPA's, inventory profits or losses are removed from business incomes by the IVA; a negative IVA removes inventory profits, and a positive IVA removes inventory losses.

20. Net saving equals gross saving less consumption of fixed capital (CFC); the estimates of gross saving, CFC, and net saving are shown in NIPA table 5.1.

21. The NIPA estimates for the government sector are based on financial statements for the Federal Government and for State and local governments, but they differ from them in several respects. See NIPA tables 3.18B on page 10 and 3.19 on page 110 of the October 1998 SURVEY OF CURRENT BUSINESS for some of the major differences. With the release of the comprehensive revision released in late October, additional differences were introduced. For more information about the changes to the NIPA government estimates, see "Improved Estimates of the National Income and Product Accounts for 1959–98: Results of the Comprehensive Revision" elsewhere in this issue. New versions of table 3.18B and 3.19 will be available soon.

Federal

The Federal Government current surplus increased \$16.6 billion, to \$134.7 billion, in the third quarter after increasing \$20.5 billion in the second. The deceleration was more than accounted for by an acceleration in current expenditures; current receipts accelerated slightly.²²

Current receipts.—Federal current receipts increased \$29.7 billion in the third quarter after increasing \$26.6 billion in the second. The step-up was attributable to accelerations in contributions for social insurance, personal tax and nontax receipts, and indirect business tax and nontax accruals.

Contributions for social insurance increased \$8.2 billion after increasing \$6.4 billion. The acceleration was more than accounted for by contributions for social security (old-age, survivors, disability, and health insurance), which increased \$7.6 billion after increasing \$5.7 billion, reflecting a step-up in wage and salary disbursements.

Personal tax and nontax receipts increased \$15.6 billion after increasing \$14.2 billion. Income taxes increased \$15.3 billion after increasing \$14.0 billion.

Indirect business tax and nontax accruals increased \$1.9 billion after increasing \$0.5 billion. The acceleration was more than attributable to an upturn in customs duties.

These accelerations were partly offset by a deceleration in corporate profits tax accruals, which increased \$4.1 billion after increasing \$5.5 billion as a result of a deceleration in domestic corporate profits before tax.

Current expenditures.—Current expenditures increased \$13.1 billion in the third quarter after increasing \$6.1 billion in the second. The acceleration was more than accounted for by upturns in grants-in-aid to State and local governments and in consumption expenditures; these upturns were partly offset by a downturn in "subsidies less the current surplus of government enterprises," by a larger decrease in net interest paid, and by a deceleration in "transfer payments (net)."

Grants-in-aid to State and local governments increased \$14.9 billion after decreasing \$4.2 billion. Grants for medicaid, for welfare and social services, and for health and hospitals turned up.

22. As a result of the revised treatment of capital transfers that was introduced in the recently released comprehensive revision of the NIPA's, "receipts" were renamed "current receipts." For more information about this change and other changes that affected the Federal Government and State and local government estimates, see Brent R. Moulton and David F. Sullivan, "A Preview of the 1999 Comprehensive Revision of the National Income and Product Accounts: New and Redesigned Tables," SURVEY 79 (September 1999): 15–28.

Consumption expenditures increased \$9.4 billion after decreasing \$1.8 billion. The upturn was more than accounted for by defense expenditures, which increased \$11.5 billion after decreasing \$3.8 billion. The upturn in defense expenditures was mostly accounted for by expenditures for services, which increased \$7.8 billion after decreasing \$5.5 billion; expenditures for research and development, for personnel support services, for installation support services, and for weapons support services turned up. The upturn in defense expenditures was partly offset by a downturn in nondefense expenditures, which decreased \$2.1 billion after increasing \$2.0 billion. The downturn was mostly attributable to services, which decreased \$1.9 billion after increasing \$1.7 billion. Within services, expenditures for research and development decreased \$1.4 billion after increasing \$2.3 billion.

"Subsidies less the current surplus of government enterprises" decreased \$10.4 billion after increasing \$6.9 billion. The downturn was more than accounted for by agricultural subsidies, which decreased \$10.1 billion after increasing \$7.3 billion. In the second quarter, farmers and farm landlords received \$6.5 billion in special payments under the Omnibus Consolidated and Emergency Supplemental Appropriations Act of Fiscal Year 1999; there were no significant special payments in the third quarter.

Net interest paid decreased \$5.4 billion after decreasing \$1.2 billion. The larger decrease was more than accounted for by interest paid to persons and business, which decreased \$10.3 billion after decreasing \$1.6 billion.

Transfer payments (net) increased \$4.7 billion after increasing \$6.3 billion. The deceleration was more than accounted for by a downturn in transfer payments to the rest of the world, which decreased \$0.9 billion after increasing \$2.4 billion; military grants to foreign countries decreased after increasing.

State and local

The State and local government current surplus increased \$10.7 billion, to \$48.3 billion, in the third quarter after decreasing \$11.1 billion in the second. The upturn was mostly accounted for by a sharp acceleration in current receipts.

Current receipts.—State and local government current receipts increased \$31.6 billion after increasing \$7.0 billion. The acceleration was mostly accounted for by an upturn in Federal grants-in-aid, which increased \$14.9 billion after decreasing

\$4.2 billion, and by an acceleration in personal tax and nontax receipts.

Personal tax and nontax receipts increased \$5.2 billion after increasing \$0.4 billion. The acceleration was mostly attributable to an upturn in income tax receipts, which increased \$4.5 billion after decreasing \$0.4 billion. In the second quarter, income taxes were reduced \$4.1 billion by changes in State tax laws and by refunds.

Indirect business tax and nontax accruals increased \$10.5 billion after increasing \$9.7 billion. The acceleration was mostly attributable to sales

taxes, which increased \$6.1 billion in the third quarter after increasing \$5.1 billion.

Corporate profits tax accruals increased \$0.5 billion after increasing \$1.0 billion, reflecting the deceleration in domestic corporate profits before tax.

Current expenditures.—Current expenditures increased \$21.0 billion after increasing \$18.2 billion. The acceleration was mostly attributable to consumption expenditures; transfer payments to persons also accelerated.

Consumption expenditures increased \$18.5 billion after increasing \$16.0 billion. The acceleration was mostly accounted for by compensation, which increased \$9.0 billion after increasing \$7.2 billion. The step-up in compensation resulted from an acceleration in State and local government employment.

Transfer payments to persons increased \$2.3 billion after increasing \$1.7 billion. The acceleration resulted from a turnaround in medical payments made on behalf of indigents and from a smaller decrease in family assistance. 

BUSINESS SITUATION

This article was prepared by Larry R. Moran, Daniel Larkins, Ralph W. Morris, Deborah Y. Sieff, and Kurt S. Bersani.

REAL GROSS domestic product (GDP) increased 5.5 percent in the third quarter of 1999, according to the "preliminary" estimates of the national income and product accounts (NIPAs), after increasing 1.9 percent in the second quarter (table 1 and chart 1); the "advance" third-quarter estimate of real GDP, reported in the November SURVEY OF CURRENT BUSINESS, had shown a 4.8-percent increase.¹ The upward revision to real GDP primarily reflected a downward

revision to imports, which are subtracted in the calculation of GDP, and upward revisions to private nonfarm inventory investment, to consumer spending for services, and to State and local government spending; these revisions were partly offset by a downward revision to private investment in equipment and software. Real final sales of domestic product and real gross domestic purchases were each revised up less than GDP.

1. Quarterly estimates in the NIPAs are expressed at seasonally adjusted annual rates. Quarter-to-quarter dollar changes are the differences between the published estimates. Quarter-to-quarter percent changes are annualized and are calculated from unrounded data unless otherwise specified.

Real estimates are calculated using a chain-type Fisher formula with annual weights for all years and for all quarters except those for the most recent year, which are calculated using quarterly weights; real estimates are expressed both as index numbers (1996=100) and as chained (1996) dollars. Price indexes (1996=100) are also calculated using a chain-type Fisher formula.

Addendum: Final sales of domestic product	8,856.6	128.7	96.9	72.7	98.7	6.2	4.6	3.4	4.6

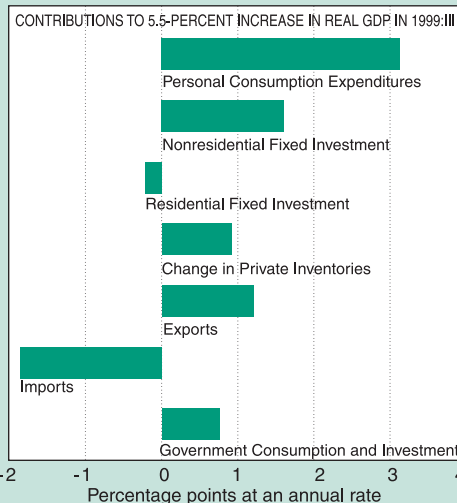

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates usually are not additive. Chained (1996) dollar levels and residuals, which measure the extent of nonadditivity in each table, are in NIPA tables 1.2, 1.4, and 1.6. Percent changes are calculated from unrounded data. Percent changes in major aggregates are in NIPA table S.1.

CHART 1

Real Gross Domestic Product

Based on Seasonally Adjusted Annual Rates

(The sources of the revisions are discussed in the section "Revisions.")

The picture of the economy in the third quarter that is shown by the preliminary estimates is similar to that shown by the advance estimates. Like the advance estimates, the preliminary estimates showed the following:

- The third-quarter increase in real GDP—at 5.5 percent—was well above the 3.5-percent average annual growth rate for real GDP over the current expansion, which began in the second quarter of 1991.
- The sharp third-quarter acceleration was primarily accounted for by an upturn in private nonfarm inventory investment and by accelerations in exports of goods and in private nonresidential investment in equipment and software. These changes were partly offset by a downturn in private residential investment and a small slowdown in consumer spending.
- Real final sales of domestic product accelerated less than GDP, as private inventory investment—which is excluded from final sales of domestic product—increased after decreasing in the second quarter.²
- Real gross domestic purchases accelerated less than GDP, as exports—which are

2. Final sales of domestic product is calculated as GDP less change in private inventories.

NOTE.—NIPA table 8.2 also shows contributions for 1998:II and 1998:III.

excluded from gross domestic purchases—accelerated sharply.³

- The largest contributors to the third-quarter increase in real GDP were consumer spending, private investment in equipment and software, exports of goods and services, and private nonfarm inventory investment (table 2 and chart 1). The increase in GDP was moderated by an increase in imports.

The price index for gross domestic purchases increased 1.7 percent in the third quarter after increasing 1.9 percent in the second (table 3). In the third quarter, a deceleration in energy prices more than offset an acceleration in food prices. The price index for gross domestic purchases excluding the prices of food and energy—food and energy prices are normally more volatile than many other prices—increased 1.2 percent in the third quarter, the same as in the second. GDP prices increased 1.1 percent after increasing 1.3 percent.

Real disposable personal income (DPI) increased 2.7 percent in the third quarter after increasing 3.2 percent in the second. The personal saving rate—personal saving as a percentage of current-

3. Gross domestic purchases—a measure of purchases by U.S. residents regardless of where the purchased goods and services were produced—is calculated as the sum of personal consumption expenditures, gross private domestic investment, and government consumption expenditures and gross investment.

Table 3.—Percent Changes in Prices

[Annual rates; based on seasonally adjusted index numbers (1996=100)]

NOTE.—Percent changes in major aggregates are in NIPA table 8.1. Index number levels are in tables 7.1, 7.2, and 7.4.

dollar DPI—continued its downtrend, decreasing to 2.1 percent from 2.5 percent; the third-quarter rate is the lowest since 1959, the first year for which quarterly estimates are available.⁴

Personal consumption expenditures

Real personal consumption expenditures (PCE) increased 4.6 percent in the third quarter after increasing 5.1 percent in the second (table 4 and chart 2). Although the third-quarter increase was smaller than that in the second quarter, it was larger than the 3.7-percent average annual growth rate over the current expansion. The deceleration was accounted for by slowdowns in durable goods and in services; nondurable goods increased slightly more than in the second quarter.

The deceleration in PCE was consistent with movements in consumer income and in indicators of consumer sentiment (chart 3). Growth in real DPI slowed, and the Index of Consumer Sentiment (prepared by the University of Michigan's Survey Research Center as a measure of consumer attitudes and expectations) declined. In contrast, the unemployment rate decreased to 4.2 percent, its lowest quarterly rate since 1970.

4. As a result of the recently released comprehensive revision of the NIPA's, the personal saving rate is higher for all periods than was previously indicated, the higher rate reflects both definitional changes and inclusion of new source data. For information about the definitional changes, see "A Preview of the 1999 Comprehensive Revision of the National Income and Product Accounts" on page 7 of the August 1999 SURVEY.

Other	889.0	6.5	9.1	18.1	8.2	3.4	5.6	9.5	5.7

NOTE.—See note to table 1 for an explanation of chained (1996) dollar series. Chained (1996) dollar levels and residuals are in NIPA tables 2.3 and 8.9B (motor vehicles). Percent changes in major aggregates are in NIPA table S.1.

Expenditures for durable goods increased 7.7 percent after increasing 9.1 percent. The deceleration was more than accounted for by a slowdown in motor vehicles and parts, which reflected a downturn in new autos. Furniture and household equipment and "other" durable goods increased a little more than in the second quarter.⁵

Expenditures for services increased 4.5 percent after increasing 5.2 percent. The slowdown was more than accounted for by a slowdown in "other" services, which largely reflected a downturn in brokerage commissions.⁶ In contrast, housing, household operation, transportation, and medical care increased slightly more than in the second quarter.

5. "Other" durable goods includes jewelry and watches, ophthalmic products and orthopedic equipment, books and maps, bicycles and motorcycles, guns and sporting equipment, photographic equipment, boats, and pleasure aircraft.

6. "Other" services includes personal care, personal business, recreational, net foreign travel, education and research, and religious and welfare activities.

Expenditures for nondurable goods increased 3.5 percent after increasing 3.3 percent. Clothing and shoes and gasoline, fuel oil, and other energy goods increased more than in the second quarter. Food and "other" nondurable goods decelerated.⁷

Private fixed investment

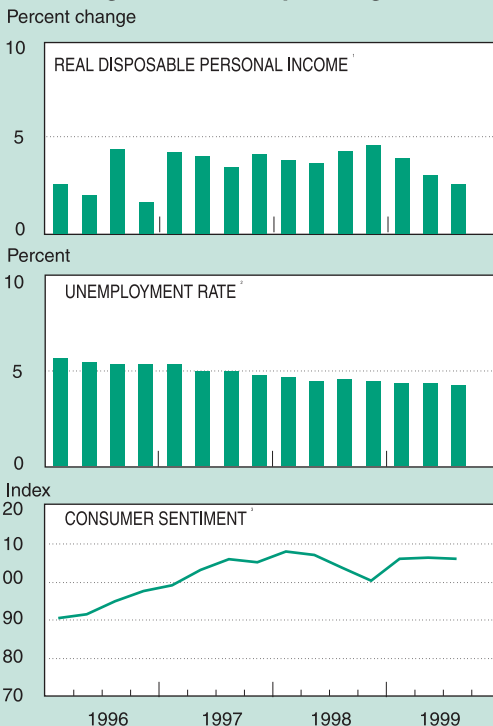

Real gross private domestic fixed investment increased 8.3 percent in the third quarter after increasing 6.6 percent in the second (chart 4). An acceleration in nonresidential fixed investment more than offset a downturn in residential investment.

Nonresidential fixed investment.—Real private nonresidential fixed investment jumped 13.3 percent quarter after increasing 7.0 percent (table 5). The acceleration primarily reflected an acceleration in spending on equipment and software; in

7. "Other" nondurable goods includes tobacco, toilet articles, stationery and writing supplies, toys, film, flowers, cleaning preparations and paper products, and magazines and newspapers.

CHART 3

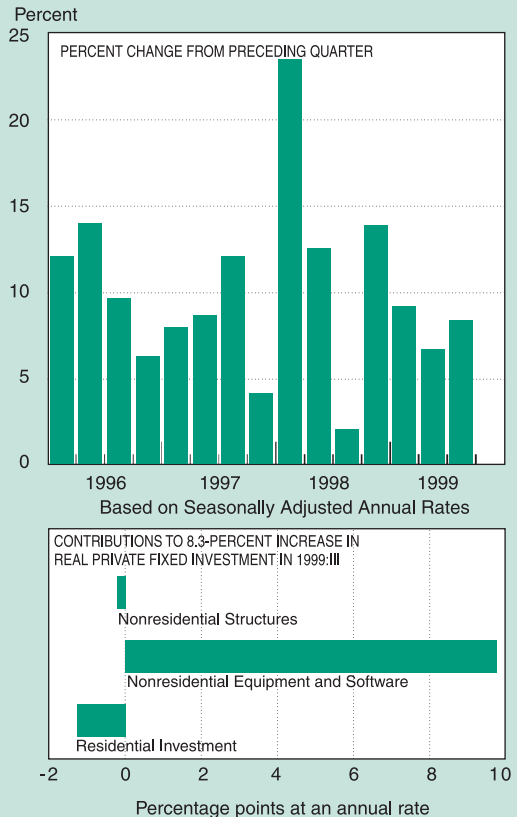

Selected Factors Affecting Consumer Spending

1. Based on seasonally adjusted annual rates.
 2. All civilian workers, seasonally adjusted. Data: U.S. Department of Labor, Bureau of Labor Statistics
 3. Data: University of Michigan's Survey Research Center
 U.S. Department of Commerce, Bureau of Economic Analysis

CHART 4

Real Private Fixed Investment

addition, spending on structures decreased less than in the second quarter.

The third-quarter increase in nonresidential fixed investment was larger than the average increase over the current expansion (8.6 percent), and it occurred despite unfavorable movements in profits, capacity utilization, and interest rates in recent quarters (chart 5). Over the past four quarters, domestic corporate profits increased only 1.8 percent, the capacity utilization rate declined to 80.6 percent from 81.4 percent, and long-term interest rates increased (for example, the yield on high-grade corporate bonds increased to 7.32 percent from 6.32 percent). In contrast, real final sales of domestic product—another factor that affects investment spending—increased 4.2 percent.

Expenditures for equipment and software jumped 18.2 percent after increasing 11.2 percent. The acceleration was accounted for by a sharp acceleration in transportation equipment—mostly reflecting an acceleration in trucks, buses, and trailers and an upturn in aircraft—and by a modest acceleration in industrial equipment. “Other” equipment decreased about as much as in the second quarter, and information processing equipment and software slowed somewhat.⁸ The slowdown in information processing equipment and software was accounted for by communication

equipment; computers and peripheral equipment and software each increased somewhat more than in the second quarter.

Structures decreased 1.5 percent after decreasing 5.3 percent. Mining exploration, shafts, and wells increased more than in the second quarter, nonresidential buildings decreased less, and utilities increased slightly after changing little. In contrast, “other” structures decreased after increasing.⁹

Residential investment.—Real private residential investment decreased 4.8 percent after increasing 5.5 percent (table 5). The downturn was accounted for by “other” residential investment, which turned down, and by single-family structures, which decreased after changing little.¹⁰ Multifamily structures changed little after a small decrease.

“Other” residential investment decreased 2.3 percent after increasing 15.4 percent. The downturn largely reflected a downturn in brokers’ commissions, as sales of new and existing homes decreased 217,000 units (seasonally adjusted annual rate) in the third quarter after increasing 406,000 units in the second. The decrease

9. “Other” structures includes streets, dams and reservoirs, sewer and water facilities, parks, airfields, brokerage commissions on the sale of structures, and net purchases of used structures.

10. “Other” residential investment includes home improvements, new manufactured home sales, brokers’ commissions on home sales, residential equipment, and other residential structures (which consists primarily of dormitories and fraternity and sorority houses.)

8. “Other” equipment includes construction and agricultural equipment, mining and oilfield equipment, electrical equipment not included in other categories, furniture and fixtures, and service-industry machinery.

1. Includes new computers and peripheral equipment only.
 2. “Other” residential investment includes home improvements, new manufactured home sales, brokers’ commissions on home sales, residential equipment, and other residential structures (which consists primarily of dormitories and fraternity and sorority houses).

NOTE.—See note to table 1 for an explanation of chained (1996) dollar series. Chained (1996) dollar levels and residuals are in NIPA tables 5.5 and 8.9B (motor vehicles). Percent changes in major aggregates are in NIPA table S.1.

in home sales may have partly reflected an increase in the commitment rate on 30-year fixed-rate mortgages to 7.6 percent from 6.9 percent (chart 6).

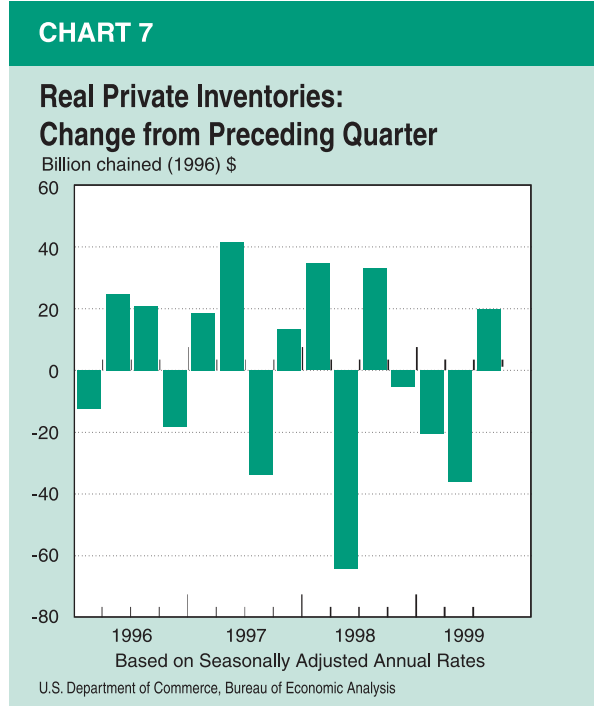

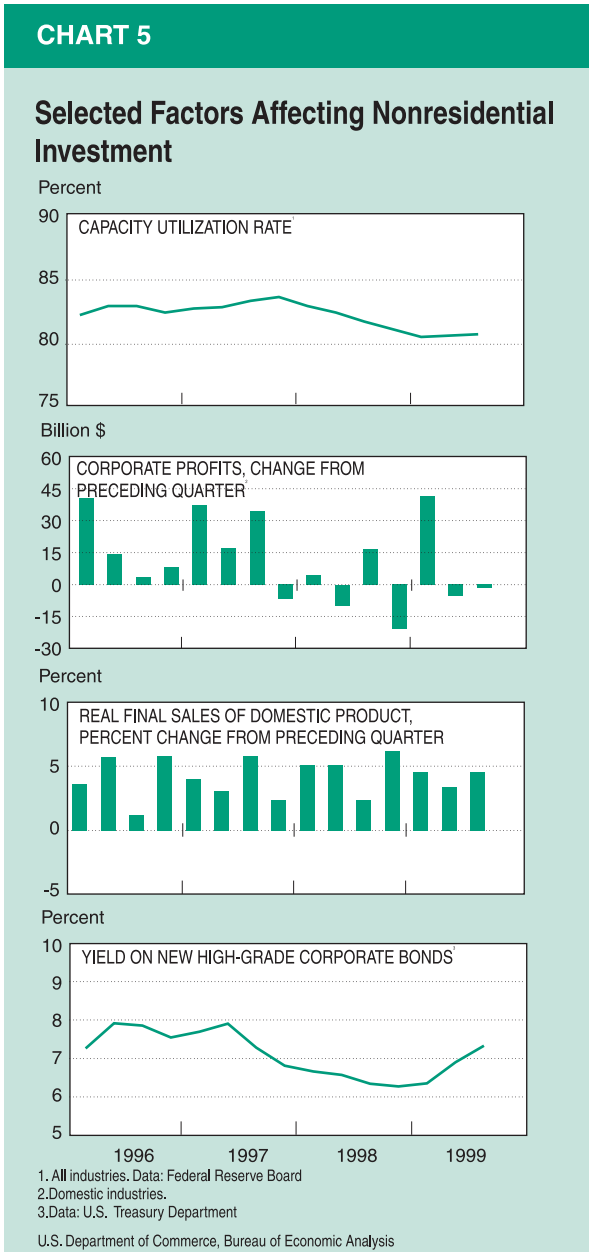

Single-family structures decreased 7.1 percent after decreasing 0.1 percent, and multifamily structures decreased 2.1 percent after decreasing 6.5 percent.

Inventory investment

Real inventory investment—that is, the change in private inventories—increased \$19.9 billion in the third quarter, as inventory accumulation stepped up to \$33.9 billion from \$14.0 billion; inventory investment had decreased \$36.1 billion in

the second quarter (table 6 and chart 7). The third-quarter step-up reflected step-ups in the accumulation of wholesale and retail inventories and a swing from liquidation to accumulation of manufacturing inventories.

Wholesale trade inventories increased \$22.1 billion, about twice as much as in the second quarter. The step-up reflected inventories of nondurable goods; inventories of durable goods increased about as much as in the second quarter.

Retail trade inventories increased \$14.3 billion after increasing \$5.9 billion. Inventories of durable-goods retailers increased \$11.0 billion after increasing \$4.0 billion; the step-up reflected inventories of motor vehicle dealers, which increased \$8.5 billion after no change. Inventories of nondurable-goods retailers increased \$3.5 billion after increasing \$1.9 billion; a downturn in inventories of apparel stores partly offset upturns or step-ups in the inventories of most other retail categories.

Manufacturing inventories increased slightly after decreasing. Inventories of materials and

supplies turned up, and inventories of finished goods increased more than in the second quarter; work-in-process inventories decreased about as much as in the second quarter. Inventories of durable-goods manufacturers increased a little after decreasing; the upturn partly reflected a substantial slowdown in the liquidation of aircraft inventories and swings from liquidation to accumulation of industrial machinery and of instruments. In contrast, inventories of electrical machinery increased less than in the second quarter, and inventories of motor vehicles decreased after increasing. Inventories of

Other	74.1	8.0	2.6	1.5	1.9	64.6	16.5	8.4	11.2
Imports of services ¹	204.5	.7	5.6	4.3	.8	1.6	11.9	8.9	1.7

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services.

NOTE.—See note to table 1 for an explanation of chained (1996) dollar series. Chained (1996) dollar levels and residuals are in NIPA table 4.4. Percent changes in major aggregates are in NIPA table S.1.

nondurable-goods manufacturers changed little after a small decrease; an upswing in petroleum inventories more than offset a downswing in chemicals.

“Other” nonfarm inventories were unchanged after increasing.¹¹

Farm inventories decreased \$3.7 billion after increasing \$0.9 billion. Crop inventories decreased after increasing. Livestock inventories decreased about as much as in the second quarter.

In the third quarter, the ratio of real nonfarm inventories to real final sales of domestic businesses decreased to 2.09 from 2.10; over the current expansion, the ratio has fluctuated in the range of 2.07 to 2.17. The inventory-sales ra-

tio that includes only final sales of goods and structures decreased from 3.73 to 3.71, its lowest level in more than 30 years.¹²

Exports and imports

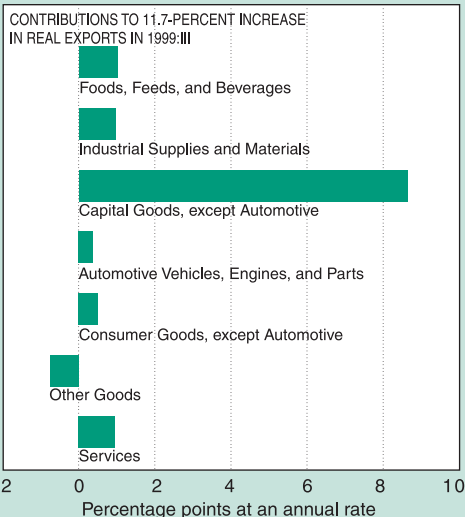

Real exports of goods and services increased 11.7 percent in the third quarter after increasing 4.0 percent in the second (table 7). Real imports of goods and services increased 14.6 percent after increasing 14.4 percent.

11. “Other” nonfarm inventories includes inventories held by the following industries: Mining; construction; public utilities; transportation; communication; finance, insurance, and real estate; and services.

12. Use of the ratio that includes all final sales of domestic businesses in the denominator implies that the production of services results in a demand for inventories that is similar to that generated in the production of goods and structures. In contrast, use of the “goods and structures” ratio implies that the production of services does not generate demand for inventories. Both implications are extreme. Production of some services may require substantial inventories, while production of other services may not.

CHART 8

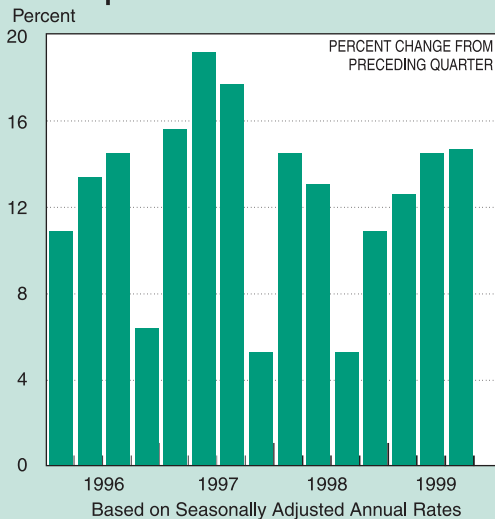

Real Exports

U.S. Department of Commerce, Bureau of Economic Analysis

CHART 9

Real Imports

U.S. Department of Commerce, Bureau of Economic Analysis

Real exports of goods increased 15.8 percent after increasing 4.3 percent (chart 8). The acceleration was more than accounted for by nonautomotive capital goods. Exports of services increased 2.7 percent after increasing 3.2 percent; the slowdown primarily reflected a slowdown in passenger fares and a downturn in "other" private services.¹³

Real imports of goods increased 17.2 percent after increasing 15.5 percent (chart 9). The step-up was more than accounted for by automotive vehicles, engines, and parts and by nonautomotive consumer goods. In contrast, petroleum and products turned down. Imports of services increased 1.7 percent after increasing 8.9 percent; the slowdown was primarily accounted for by a slowdown in "other" private services and by a downturn in travel.¹⁴

Government spending

Real government consumption expenditures and gross investment increased 4.2 percent in the third quarter after increasing 1.3 percent in the second (table 8 and chart 10). Spending by the Federal Government and by State and local governments both increased more than in the second quarter.

Federal defense spending increased 11.4 percent after decreasing 2.6 percent. Consumption spending turned up, largely reflecting upturns for research and development, for personnel support, and for installation support. Investment spending decreased slightly after increasing sharply;

equipment and software was unchanged after increasing, and structures decreased more than in the second quarter.

Federal nondefense spending decreased 8.1 percent after increasing 10.9 percent. Consumption

NOTE.—See note to table 1 for an explanation of chained (1996) dollar series. Chained (1996) dollar levels and residuals are in NIPA table 3.8. Percent changes in major aggregates are in NIPA table S.1.

expenditures turned down, largely reflecting a downturn in services; durable goods and nondurable goods also turned down. Investment spending decreased after a sharp increase, reflecting a downturn in equipment and software.

State and local government spending increased 4.4 percent after increasing 0.9 percent. The step-up was primarily accounted for by an upturn in investment in structures.

Table 9.—Revisions to Change in Real Gross Domestic Product and Prices, Third Quarter 1999

[Seasonally adjusted at annual rates]

Addenda:					
Final sales of domestic product	5.2	5.8	.6	10.1
Gross domestic purchases price index	1.6	1.7	.1
GDP price index	1.0	1.1	.1

NOTE.—The preliminary estimates for the third quarter of 1999 incorporate the following revised or additional major source data that were not available when the advance estimates were prepared.

Personal consumption expenditures: Retail sales for August and September (revised), consumers' share of new-car purchases for September, average unit value for domestic new autos for September (revised), and consumers' share of new-truck purchases for September.

Nonresidential fixed investment: Construction put in place for July and August (revised) and September, manufacturers' shipments of machinery and equipment for August (revised) and September, and exports and imports of machinery and equipment for August (revised) and September.

Residential fixed investment: Construction put in place for July and August (revised) and September.

Change in private inventories: Manufacturing, retail trade, and wholesale trade inventories for July and August (revised) and September.

Exports and imports of goods and services: Exports and imports of goods for August (revised) and September.

Government consumption expenditures and gross investment: Monthly Treasury Statement detailed data for September, Department of Defense detailed financial report for the quarter, and State and local government construction put in place for July and August (revised) and September.

Wages and salaries: Employment, average hourly earnings, and average weekly hours for August and September (revised).

GDP prices: Detailed merchandise export and import price indexes for July through September (revised), unit-value index for petroleum imports for August (revised) and September, and housing prices for the third quarter.

Revisions

The 0.7-percentage-point difference between the preliminary estimate of a 5.5-percent increase in real GDP in the third quarter and the advance estimate of a 4.8-percent increase is slightly larger than the average revision of 0.5 percentage point (without regard to sign) from the advance estimate to the preliminary estimate in 1978–98 (table 9).

As noted earlier, the upward revision was primarily accounted for by a downward revision to imports and by upward revisions to private nonfarm inventory investment, to consumer spending for services, and to State and local government spending; these revisions were partly offset by an downward revision to private investment in equipment and software.

The downward revision to imports mainly reflected the incorporation of newly available Census Bureau data on international trade in goods for September. For the advance estimate, BEA had assumed that goods imports would increase about 0.8 percent in September (monthly rate), but newly available data indicated a decrease of 0.1 percent.

The upward revision to private nonfarm inventory investment was more than accounted for by an upward revision to merchant wholesale inventories, which reflected the incorporation of revised Census Bureau data on inventories for August and newly available data for September.

The upward revision to PCE for services was primarily to medical care and to brokerage commissions. Medical care reflected the incorporation of data from the Bureau of Labor Statistics employment cost index, which is one of the indicators for hospital expenses; brokerage commissions reflected the incorporation of newly available Security and Exchange Commission data on exchange volume.

The upward revision to State and local government spending was primarily to investment in buildings and reflected the incorporation of revised Census Bureau data on the value of construction put in place for July and August and newly available data for September.

The downward revision to private investment in equipment and software was primarily to computers and peripheral equipment and to aircraft. It reflected the incorporation of revised Census Bureau data on shipments for July and August and newly available data on shipments and on imports of computers for September.

The preliminary estimates of the increases in the price indexes for gross domestic purchases (1.7 percent) and for GDP (1.1 percent) were 0.1 percentage point higher than the advance estimates.

The preliminary estimate of the increase in real disposable personal income (DPI) was 2.7 percent, 0.2 percentage point higher than the advance estimate, and that of the increase in current-dollar DPI was 4.6 percent, 0.1 percentage point higher. The preliminary estimate of the personal saving rate was 2.1 percent, the same as the advance estimate.

Corporate Profits

Profits from current production increased \$8.2 billion (or 0.9 percent at a quarterly rate) in the third quarter after decreasing \$6.5 billion (0.7 percent) in the second (table 10).¹⁵ Third-quarter profits were reduced by about \$8 billion as a result of Hurricane Floyd, which made landfall in North Carolina in mid-September; benefits paid by insurance companies reduced profits by about

\$6 billion, and uninsured losses reduced profits by about \$2 billion.

Profits of domestic nonfinancial corporations decreased \$2.1 billion (0.4 percent) after increasing \$2.2 billion (0.4 percent); unit profits decreased, reflecting increased unit costs and unchanged unit prices. Profits of domestic financial corporations increased \$0.6 billion (0.4 percent) after decreasing \$7.8 billion (4.2 percent). Profits from the rest of the world increased \$9.8 billion (9.4 percent) after decreasing \$1.0 billion (0.9 percent); payments by U.S. affiliates of earnings to their foreign parents increased less than in the second quarter, and receipts of earnings from foreign affiliates increased more.¹⁶

Cash flow from current production, a profits-related measure of internally generated funds available for investment, increased \$16.0 billion after decreasing \$6.7 billion.¹⁷ The ratio of cash flow to nonresidential fixed investment, an indicator of the share of the current level of investment that could be financed by internally

15. Profits from current production is estimated as the sum of profits before tax, the inventory valuation adjustment, and the capital consumption adjustment; it is shown in NIPA tables 1.9, 1.14, 1.16, and 6.16C as corporate profits with inventory valuation and capital consumption adjustments. Percent changes in profits are shown at quarterly, not annual, rates.

16. Profits from the rest of the world is calculated as (1) receipts by U.S. residents of earnings from their foreign affiliates plus dividends received by U.S. residents from unaffiliated foreign corporations minus (2) payments by U.S. affiliates of earnings to their foreign parents plus dividends paid by U.S. corporations to unaffiliated foreign residents. These estimates include capital consumption adjustments (but not inventory valuation adjustments) and are derived from BEA's international transactions accounts.

17. Cash flow from current production is undistributed profits with inventory valuation and capital consumption adjustments plus the consumption of fixed capital.

Table 10.—Corporate Profits

IVA Inventory valuation adjustment

generated funds, decreased from 79.3 percent to 78.5 percent, its lowest level since 1990; the ratio's average level for 1990–98 was 84.9 percent.

Domestic industry profits and related measures.—Domestic industry profits decreased \$0.7 billion after decreasing \$8.2 billion.¹⁸ Profits of domestic nonfinancial corporations decreased \$2.4 billion after decreasing \$1.3 billion. Profits of retail trade, wholesale trade, and manufacturing decreased, and profits of the transportation and utility group increased. Profits of domestic financial corporations increased \$1.7 billion after decreasing \$7.0 billion.

Profits before tax (PBT) increased \$22.0 billion after increasing \$17.7 billion. The difference between the \$22.0 billion increase in PBT and the \$8.2 billion increase in profits from current production mainly reflected a larger negative level of the inventory valuation adjustment (IVA). The IVA removes inventory profits and losses from business income.¹⁹ In the third quarter, inventory profits amounted to \$26.5 billion, up from \$13.6 billion in the second quarter.

Government Sector

The combined current surplus of the Federal Government and of State and local governments—the NIPA measure of net saving by government—increased \$27.3 billion, to \$183.0 billion, in the third quarter after increasing \$9.4 billion in the second (table 11).²⁰ The acceleration was more than accounted for by an upturn in the State and local government current surplus; the Federal Government current surplus decelerated.²¹

18. Domestic industry profits are estimated as the sum of corporate profits before tax and the inventory valuation adjustment; they are shown in NIPA table 6.16c. Estimates of the capital consumption adjustment do not exist at a detailed industry level; they are available only for total financial and total nonfinancial industries.

19. As prices change, companies that value inventory withdrawals at original acquisition (historical) costs may realize inventory profits or losses. Inventory profits—a capital-gains-like element in profits—result from an increase in inventory prices, and inventory losses—a capital-loss-like element in profits—result from a decrease in inventory prices. In the NIPA's, inventory profits or losses are removed from business incomes by the IVA; a negative IVA removes inventory profits, and a positive IVA removes inventory losses.

20. Net saving equals gross saving less consumption of fixed capital (CFC); the estimates of gross saving, CFC, and net saving are shown in NIPA table 5.1.

21. The NIPA estimates for the government sector are based on financial statements for the Federal Government and for State and local governments, but they differ from them in several respects. See NIPA tables 3.18B on page 10 and 3.19 on page 110 of the October 1998 SURVEY OF CURRENT BUSINESS for some of the major differences. With the release of the comprehensive revision released in late October, additional differences were introduced. For more information about the changes to the NIPA government estimates, see "Improved Estimates of the National Income and Product Accounts for 1959–98: Results of the Comprehensive Revision" elsewhere in this issue. New versions of table 3.18B and 3.19 will be available soon.

Federal

The Federal Government current surplus increased \$16.6 billion, to \$134.7 billion, in the third quarter after increasing \$20.5 billion in the second. The deceleration was more than accounted for by an acceleration in current expenditures; current receipts accelerated slightly.²²

Current receipts.—Federal current receipts increased \$29.7 billion in the third quarter after increasing \$26.6 billion in the second. The step-up was attributable to accelerations in contributions for social insurance, personal tax and nontax receipts, and indirect business tax and nontax accruals.

Contributions for social insurance increased \$8.2 billion after increasing \$6.4 billion. The acceleration was more than accounted for by contributions for social security (old-age, survivors, disability, and health insurance), which increased \$7.6 billion after increasing \$5.7 billion, reflecting a step-up in wage and salary disbursements.

Personal tax and nontax receipts increased \$15.6 billion after increasing \$14.2 billion. Income taxes increased \$15.3 billion after increasing \$14.0 billion.

Indirect business tax and nontax accruals increased \$1.9 billion after increasing \$0.5 billion. The acceleration was more than attributable to an upturn in customs duties.

These accelerations were partly offset by a deceleration in corporate profits tax accruals, which increased \$4.1 billion after increasing \$5.5 billion as a result of a deceleration in domestic corporate profits before tax.

Current expenditures.—Current expenditures increased \$13.1 billion in the third quarter after increasing \$6.1 billion in the second. The acceleration was more than accounted for by upturns in grants-in-aid to State and local governments and in consumption expenditures; these upturns were partly offset by a downturn in "subsidies less the current surplus of government enterprises," by a larger decrease in net interest paid, and by a deceleration in "transfer payments (net)."

Grants-in-aid to State and local governments increased \$14.9 billion after decreasing \$4.2 billion. Grants for medicaid, for welfare and social services, and for health and hospitals turned up.

22. As a result of the revised treatment of capital transfers that was introduced in the recently released comprehensive revision of the NIPA's, "receipts" were renamed "current receipts." For more information about this change and other changes that affected the Federal Government and State and local government estimates, see Brent R. Moulton and David F. Sullivan, "A Preview of the 1999 Comprehensive Revision of the National Income and Product Accounts: New and Redesigned Tables," SURVEY 79 (September 1999): 15–28.

Consumption expenditures increased \$9.4 billion after decreasing \$1.8 billion. The upturn was more than accounted for by defense expenditures, which increased \$11.5 billion after decreasing \$3.8 billion. The upturn in defense expenditures was mostly accounted for by expenditures for services, which increased \$7.8 billion after decreasing \$5.5 billion; expenditures for research and development, for personnel support services, for installation support services, and for weapons support services turned up. The upturn in defense expenditures was partly offset by a downturn in nondefense expenditures, which decreased \$2.1 billion after increasing \$2.0 billion. The downturn was mostly attributable to services, which decreased \$1.9 billion after increasing \$1.7 billion. Within services, expenditures for research and development decreased \$1.4 billion after increasing \$2.3 billion.

"Subsidies less the current surplus of government enterprises" decreased \$10.4 billion after increasing \$6.9 billion. The downturn was more than accounted for by agricultural subsidies, which decreased \$10.1 billion after increasing \$7.3 billion. In the second quarter, farmers and farm landlords received \$6.5 billion in special payments under the Omnibus Consolidated and Emergency Supplemental Appropriations Act of Fiscal Year 1999; there were no significant special payments in the third quarter.

Net interest paid decreased \$5.4 billion after decreasing \$1.2 billion. The larger decrease was more than accounted for by interest paid to persons and business, which decreased \$10.3 billion after decreasing \$1.6 billion.

Transfer payments (net) increased \$4.7 billion after increasing \$6.3 billion. The deceleration was more than accounted for by a downturn in transfer payments to the rest of the world, which decreased \$0.9 billion after increasing \$2.4 billion; military grants to foreign countries decreased after increasing.

State and local

The State and local government current surplus increased \$10.7 billion, to \$48.3 billion, in the third quarter after decreasing \$11.1 billion in the second. The upturn was mostly accounted for by a sharp acceleration in current receipts.

Current receipts.—State and local government current receipts increased \$31.6 billion after increasing \$7.0 billion. The acceleration was mostly accounted for by an upturn in Federal grants-in-aid, which increased \$14.9 billion after decreasing

\$4.2 billion, and by an acceleration in personal tax and nontax receipts.

Personal tax and nontax receipts increased \$5.2 billion after increasing \$0.4 billion. The acceleration was mostly attributable to an upturn in income tax receipts, which increased \$4.5 billion after decreasing \$0.4 billion. In the second quarter, income taxes were reduced \$4.1 billion by changes in State tax laws and by refunds.

Indirect business tax and nontax accruals increased \$10.5 billion after increasing \$9.7 billion. The acceleration was mostly attributable to sales

taxes, which increased \$6.1 billion in the third quarter after increasing \$5.1 billion.

Corporate profits tax accruals increased \$0.5 billion after increasing \$1.0 billion, reflecting the deceleration in domestic corporate profits before tax.

Current expenditures.—Current expenditures increased \$21.0 billion after increasing \$18.2 billion. The acceleration was mostly attributable to consumption expenditures; transfer payments to persons also accelerated.

Consumption expenditures increased \$18.5 billion after increasing \$16.0 billion. The acceleration was mostly accounted for by compensation, which increased \$9.0 billion after increasing \$7.2 billion. The step-up in compensation resulted from an acceleration in State and local government employment.

Transfer payments to persons increased \$2.3 billion after increasing \$1.7 billion. The acceleration resulted from a turnaround in medical payments made on behalf of indigents and from a smaller decrease in family assistance.

ON OCTOBER 28, 1999, the Bureau of Economic Analysis (BEA) released national income and product accounts (NIPA's) estimates beginning with 1959 that reflected the 11th comprehensive revision of the accounts. These estimates incorporate a number of major definitional and statistical improvements that are designed to better measure the evolving U.S. economy.

The major improvements that were introduced in this comprehensive revision were described in previous articles in the *SURVEY OF CURRENT BUSINESS*. The definitional and classificational changes, which were described in an article in the August issue, included the following: Recognition of business and government expenditures for software, including own-account production of software, as investment; reclassification of government employee retirement plans; modified treatment of private noninsured pension plans; reclassification of certain transactions as capital transfers; and redefinition of the value of imputed services of regulated investment companies.¹

The statistical changes, which were described in an article in the October issue, included the following: Incorporation of the 1992 benchmark input-output accounts and the preliminary results of the 1996 annual update of those accounts; improved estimates of the real value of unpriced banking services; and incorporation of geometric-mean-type consumer price indexes.²

In addition, the presentational changes that were made to the NIPA tables to reflect the definitional, classificational, and statistical changes were described in an article in the September issue.³ The November issue included a slightly

expanded version of the October 28, 1999, news release that presented the revised estimates for the first time.

This article builds on the previous ones and presents a discussion of the major sources of the revisions—that is, the extent to which they are attributable to the various definitional and statistical changes—for each of the major NIPA aggregates and components beginning with 1959.

The most important differences between the revised and the previously published estimates for 1959–98 are the following:

- Current-dollar gross domestic product (GDP) was revised up for all years; for 1998, GDP is revised up \$248.9 billion to \$8,759.9 billion. The upward revisions were primarily accounted for by the definitional change that recognized software as investment.
- The revised estimates of real GDP show an average annual growth rate of 3.4 percent,

0.2 percentage point higher than that shown in the previously published estimates. The upward revision to real GDP growth was primarily attributable to statistical changes to prices and to the recognition of software as investment.

- The upward revisions to the growth of real GDP were concentrated in the period since 1977. For 1959–77, the average annual growth rate was 3.7 percent, the same as in the previously published estimates. For 1977–92, the growth rate of real GDP was revised up 0.3 percentage point to 2.9 percent, and for 1992–98, it was revised up 0.4 percentage point to 3.6 percent (table 1).
- For business cycles as measured by turning points in quarterly real GDP, there were no changes in the timing of cyclical peaks and troughs, but there were revisions to the pace of contractions and expansions. For contrac-

Acknowledgments

Brent R. Moulton, Associate Director for National Income, Expenditures, and Wealth Accounts, supervised the preparation of this comprehensive revision of the national income and product accounts. Karl D. Galbraith, Chief of the Government Division, and Ralph H. Kozlow, Chief of the National Income and Wealth Division, directed major parts of the revision. Robert P. Parker, Chief Statistician, provided technical guidance. Shelby W. Herman and Kali K. Kong—together with Willie J. Abney, Jennifer A. Bennett, Arnold J. Katz, Kurt Kunze, Leonard J. Loebach, Karin E. Moses, Thae S. Park, Claire G. Pitzer, and David F. Sullivan—coordinated and conducted the estimate review process.

Eugene P. Seskin wrote the article describing the revision. Kali K. Kong and Karin E. Moses prepared the tables for the article. Duane G. Hackmann, Sherman J. Hammack, Karl V. Rohrer and Teresa L. Weadock prepared analyses and other review materials for both the article and the news release. Mary Carol Barron, Michael J. Boehm, Sherman J. Hammack, John Sporing, Jr., and Mary D. Young were responsible for developing and operating the computer systems used to compile, check, analyze, and report the final estimates. David F. Sullivan coordinated the presentational improvements and table changes.

Other BEA staff who made significant contributions to the revision are listed below.

Personal consumption expenditures—Clinton P. McCully, Goods—M. Greg Key, Robert N. Ganz, Everette P. Johnson, James J. Raley III, Shirley D. Tisdale. *Services*—Aaron C. Catlin, Thea C. Graham, Myung G. Han.

Investment and Foreign transactions—Carol E. Moylan, Leonard J. Loebach, Randall T. Matsunaga. *Inventories*—Debra M. Blagburn, Jennifer A. Ribarsky. *Structures*—Wharton H. Berger, Velma P. Henry. *Foreign transactions, equipment, software, and prices*—David B. Wasshausen, Jeffrey W. Crawford, Nadia F.P. Sadée, Nicole M. Spugnardi, Reed M. Wirick.

Federal Government transactions—Pamela A. Kelly, Laura M. Beall, Peter G. Beall, Kurt S. Bersani, James E. Boucher, Ann M.

Groszkiewicz, Doris N. Johnson, Sean P. Keehan, Raymen G. LaBella, Claire G. Pitzer, Michael D. Randall, Michelle D. Robinson, Mary L. Roy, Shelly Smith, Benyam Tsehaye, Andrew E. Vargo.

State and local government—Bruce E. Baker, Steven J. Andrews, W. Robert Armstrong, Joanne Buenzli, Florence H. Campi, Benjamin D. Cowan, Janet H. Kmitch, Donald L. Peters.

Chain-type quantity and price measures—Christian Ehemann, Michael J. Boehm, Sherman Hammack, Karl V. Rohrer.

Income—Carol E. Moylan.

Personal income—Paul R. Lally, Thae S. Park, Toui C. Pomsouvan.

Employee compensation—Paul R. Lally, Molly B. Knight. *Wages and salaries*—Brian V. Moran, James E. Rankin. *Other labor income*—Monisha Primlani, Garth K. Trinkl, Ernest D. Wilcox.

Business income—Kenneth A. Petrick. *Corporate profits*—Debora A. Fisher, Jerry L. Stone. *Nonfarm proprietors' income*—Willie J. Abney.

Property income—George M. Smith. *Farm output and income*—Fred G. Kappler. *Interest income*—Mary Kate Schuster. *Rental income of persons and housing output*—Denise A. McBride, Shaunda M. Villones.

Consumption of fixed capital—Shelby W. Herman. *Private*—Phyllistine M. Barnes, Michael D. Glenn, Kurt Kunze, Dennis R. Weikel. *Government*—D. Timothy Dobbs, Jennifer A. Bennett, Charles S. Robinson.

NIPA information—Marilyn E. Baker, Phyllistine M. Barnes, Virginia H. Mannering, Teresa L. Weadock.

Secretarial—Esther M. Carter, Katherine Dent, Angela P. Pointer, Angela M. Tucker, Dorothy A. Wilson.

Other contributions to definitional, classificational, and statistical improvements were made by Robert L. Brown, Barbara M. Fraumeni, Bruce T. Grimm, Robert J. McCahill, Lisa C. Ninomiya, Mark A. Planting, and Robert E. Yuskavage.

tions, the largest revision was for the most recent one, which began in the second quarter of 1990 and ended in the first quarter of 1991; the average quarterly percent change (at annual rates) is now -1.8 percent, compared with -2.7 percent in the previously published estimates.

- For the current expansion, which began in the first quarter of 1991, the average quarterly percent change through the second quarter of 1999 is now 3.5 percent, compared with 3.1 percent in the previously published estimates.
- For gross domestic purchases prices, the revised estimates show an average annual growth rate of 4.1 percent, 0.1 percentage point lower than the previously published estimates. The revisions to prices primarily reflected statistical changes, including the incorporation of newly available geometric-mean-type consumer price indexes back to 1978, a new implicit price for unpaid banking services, and the calculation of prices for national defense consumption and investment at a more detailed level than in the previously published estimates.

- The revised estimates of real disposable personal income (DPI) show an average annual growth rate of 3.5 percent, 0.2 percentage point higher than in the previously published estimates. The upward revision was largely accounted for by the definitional changes to government employee retirement plans and to capital transfers and by statistical changes to the prices for personal consumption expenditures.
- For the personal saving rate, the revised estimates are substantially higher than the previously published estimates; however, the rate continues to show a two-decade downturn. For 1982-98, the personal saving rate now declines from 10.9 percent to 3.7 percent, compared with the previous decline from 9.0 percent to 0.5 percent (table 2). The higher rate is primarily attributable to definitional changes, particularly the reclassification of government employee retirement plans.
- For the national saving rate, the revised estimates for 1988-98 are considerably higher than the previously published estimates. During this period, the upward revisions

averaged 1.0 percentage point. The higher rate is primarily attributable to definitional changes, particularly the recognition of software as investment.

Early next year, BEA will release revised NIPA estimates for 1929–58 that reflect this comprehensive revision. (For information on the availability of the revised estimates, see the box below.)

The first section of this article discusses the annual current-dollar estimates, and the second section discusses the annual estimates of real GDP. The third section discusses the annual price estimates, and the fourth discusses the quarterly estimates of real GDP. The fifth section discusses changes in methodology.

Annual Current-Dollar Estimates

For 1959–98, GDP was revised up for all years, national income was revised down for most years, and personal income was revised up for most years (table 3 and appendix A). Prior to 1995, the revisions to GDP were largely accounted for by the definitional change that recognized software as investment; excluding the definitional and classificational changes, the revisions to GDP were small. Beginning with 1995, the revisions grew as a result of statistical changes that affected personal consumption expenditures (PCE), nonresidential structures, and State and local government consumption expenditures and gross investment.

For national income, the revisions largely resulted from downward revisions to rental income of persons that reflected an improved methodology for estimating the income of persons from the rental of nonfarm nonresidential properties. Downward revisions to net interest were offset in most years by upward revisions to corporate

profits, reflecting the modified treatment of non-insured pension plans. Other sizable revisions within national income included upward revisions to nonfarm proprietors' income, beginning with 1988, and downward revisions to wage and salary accruals for 1996 and 1997 and a large upward revision for 1998. (For further details on these revisions, see the corresponding sections below.)

For personal income, the upward revisions primarily reflected the reclassification of government employee retirement plans (see the section "Personal income and its disposition"). This reclassification raised personal income, but it had no effect on national income, because employer contributions were added to other labor income (a component of both national income

Availability of Revised Estimates and Related Information

The estimates shown in the NIPA tables beginning on page 44, along with estimates for earlier periods (for most tables, back to 1959), are available on the BEA Web site at <www.bea.doc.gov> and on the STAT-USA Web site at <www.stat-usa.gov>.

The following issues of the SURVEY OF CURRENT BUSINESS contain information about the comprehensive revision:

- August 1999: Definitional and classificational changes
- September 1999: New and redesigned tables
- October 1999: Statistical changes

- November 1999: Reprint of the October 28, 1999, GDP news release

Other information related to the NIPA estimates will be released as work is completed. The listing below provides *approximate* schedules for the release of most of the remaining estimates.

January 2000: Real inventories, sales, and inventory-sales ratios for manufacturing and trade, 1977–98

March 2000: Fixed assets and consumer durable goods (fixed reproducible tangible wealth), 1925–98

March 2000: Revised NIPA estimates, 1929–58

May 2000: Gross product by industry, 1947–98

and personal income) and were subtracted from employer contributions for social insurance (only a component of national income).

The remainder of this section provides additional detail on GDP, national income, other NIPA aggregates, and their major components. Appendix B shows the revisions to the components of the five summary accounts of the NIPAs for 1959 and for 1987–98.

National income and product

GDP.—GDP in current dollars was revised up for all years; the average annual growth rate for 1959–98, at 7.6 percent, was revised up 0.1 percentage point from the previously published estimate. Expressed as a percentage of the level of GDP, the revisions generally increased over time: The revision was less than 0.1 percent of GDP for 1959, but it was 1.2 percent for 1992 and 2.9 percent for 1998. The revisions due to the definitional changes ranged from zero for 1959 to 2.0 percent for 1998. The revisions due to the statistical changes ranged from –0.1 percent for both 1982 and 1992 to 0.9 percent for 1998.

Gross domestic income (GDI) and the statistical discrepancy.—GDI was revised up for all years beginning with 1976. The revisions as a percentage of the level of GDI generally increased over time, peaking at 2.6 percent for 1998. Prior to 1994, the revisions to GDI for most years were similar to those for GDP; the revisions to both mainly reflected the definitional change that recognized software as investment. Within GDI, these revisions primarily affected the consumption of fixed capital. Beginning with 1994, the upward revisions to both GDP and GDI continued to be accounted for mainly by the definitional change for software, but because of statistical changes, the size of the revisions to GDP differed from that to GDI.

The differences between the revisions to GDP and those to GDI are shown as revisions to the statistical discrepancy.⁴ These revisions result almost entirely from statistical changes, because definitional and classificational changes generally result in identical revisions to, or offsetting revisions within, GDP and GDI.

For 1959–98, the revised estimates of the statistical discrepancy averaged (without regard to

sign) 0.6 percent of GDP, 0.1 percentage point larger than in the previously published estimates.

For 1992–98, in the revised estimates, current-dollar GDP increases at an average annual rate of 5.6 percent, 0.2 percentage point less than the increase in GDI. In the previously published estimates, this difference was 0.3 percentage point.

Product-side components

PCE for goods.—PCE for goods was revised up for 1975–88, down for 1989–94, and up for 1995–98 (table 4). For 1988–92, the revisions reflected the incorporation of the results of the 1992 input-output (I-O) accounts.⁵ Beginning with 1993, the revisions reflected the extrapolation of the 1992 I-O account estimates, using revised retail sales data benchmarked to preliminary estimates from the 1997 Census of Retail Trade.⁶ In addition, beginning with 1993, the commodity distribution for most goods was affected by incorporating the results of the 1996 annual update of the I-O accounts.⁷

PCE for durable goods was revised up for 1977–87 and down for 1988–98. For 1977–87, the revisions were to furniture and household

5. The 1992 I-O estimates were used for the benchmarking of PCE, except for the definitional and statistical changes developed after completion of the I-O accounts. See Ann M. Lawson, "Benchmark Input-Output Accounts for the U.S. Economy, 1992," SURVEY 77 (November 1997): 36–82.

6. The extrapolation used the retail-control method; see "Updated Summary NIPA Methodologies," SURVEY 78 (September 1998): 15.

7. See Moulton and Seskin, "Statistical Changes," 9.

4. The statistical discrepancy, which measures the difference between GDP and GDI, arises because GDP and GDI are estimated using largely independent source data. See the box "The Statistical Discrepancy" in Robert P. Parker and Eugene P. Seskin, "Annual Revision of the National Income and Product Accounts," SURVEY 77 (August 1997): 19.

equipment and reflected the addition of royalty payments to the estimates of expenditures for records, tapes, and disks.⁸ The downward revisions beginning with 1988 primarily reflected downward revisions to expenditures for furniture and household equipment and for motor vehicles and parts. The revisions to furniture and household equipment were mostly to video and audio equipment and to “other” durable house furnishings. The revisions to motor vehicles and parts were mostly to new autos and reflected an improved methodology for estimating expenditures for new autos that had been introduced in the 1992 I-O estimates. Beginning with 1993, the revised estimates for motor vehicles and parts also reflected a new method for calculating net transactions of used vehicles that incorporated modified retention periods and rates for business-owned vehicles that depended on whether the vehicles were owned, rented, or leased.⁹

PCE for nondurable goods was revised up for all years beginning with 1975. Prior to 1993, the revisions were small, but there were sizable offsetting revisions to some of the subcategories. Revisions through 1987 reflected the reclassification of the food-cost portion of the Special Supplemental Nutrition Program for Women, Infants, and Children (see also the section “**Government consumption expenditures and gross investment**”); this reclassification also affected subsequent years. For 1988–92, the revisions to PCE for nondurable goods were small and primarily reflected benchmarking to the 1992 I-O estimates; there were some sizable offsetting revisions to subcategories. In particular, food expenditures were revised up. Within food, increasingly large upward revisions to “purchased meals and beverages” reflected an improved allocation of receipts for this category between purchases by persons and purchases by business and by government and also reflected improved estimates of the misreporting adjustments for these receipts. Beginning with 1993, nondurable goods was revised up by increasingly large amounts that reached \$46.5 billion for 1998. The revisions were primarily accounted for by food; increasingly large upward revisions to purchased meals and beverages were partly offset

by downward revisions to food purchased for off-premise consumption.

Beginning with 1988, clothing and shoes expenditures were revised down; the revisions were primarily to women’s and children’s clothing and accessories. “Other” nondurable goods was revised down for 1988–93 and up for 1994–98. This pattern reflected the relative magnitudes of offsetting revisions to subcategories: Downward revisions to expenditures for tobacco products, for toilet articles and preparations, and for “cleaning and polishing preparations, and miscellaneous household supplies and paper products” and upward revisions to expenditures for drug preparations and sundries.

PCE for services.—Beginning with 1973, PCE for services was revised up for all years except for 1986. For most years, the revisions largely reflected definitional changes that affected personal business services. In addition, there were a number of sizable offsetting revisions, reflecting benchmarking to the 1992 I-O estimates and the incorporation of newly available and revised source data.

Beginning with 1992, there were sizable downward revisions to housing services, particularly to the imputed space rent for owner-occupied nonfarm dwellings and to rental payments for tenant-occupied dwellings. For owner-occupied nonfarm dwellings, the revisions reflected revised estimates of the effect on space rent per unit of revised estimates of changes in the quality of the owner-occupied housing stock.¹⁰ For tenant-occupied nonfarm, permanent-site housing, the revisions reflected revised expenditures for household utilities; this item is used to remove utility charges, which are recorded separately in household operation services, from estimates of mean gross rent based on the Census Bureau’s American Housing Survey (AHS). For 1996–98, revisions to both owner- and tenant-occupied nonfarm space rent also reflected newly available 1997 AHS data on mean gross rent and the number of tenant-occupied units.

For all years, especially for 1996–98, the upward revisions to household operation services, particularly to electricity services, reflected the addition of commodity taxes to the reported source data.¹¹

8. PCE estimates for this category are benchmarked to I-O values, which are prepared using the commodity-flow method in which these estimates are calculated by adjusting the value of manufacturers’ shipments of records, tapes, and disks for exports and imports, trade and transportation margins, and taxes. Because royalty payments are not directly reported in the source data used for these series, previous I-O estimates did not reflect the full market value of these expenditures.

9. See Moulton and Seskin, “Statistical Changes,” 10–11.

10. Imputed space rent for owner-occupied nonfarm dwellings is space rent per unit times the number of units. Space rent per unit equals net contract rent less consumption of fixed capital on major appliances and furnishings. Net contract rent per unit is interpolated between, and extrapolated from, benchmark values, using the change in the consumer price index for owners’ equivalent rent of primary residence with a judgmental adjustment for changes in the quality of housing.

11. For additional details, see Moulton and Seskin, “Statistical Changes,” 10.

For 1998, the revision to electricity services also reflected the incorporation of data from the Energy Information Administration on residential electricity sales revenue.

Beginning with 1988, transportation services—particularly motor vehicle “repair, greasing, washing, parking, storage, rental, and leasing” services—were revised down; these revisions reflected the incorporation of the 1992 I-O accounts, of newly available data on motor vehicle rental and leasing from the Bureau of Labor Statistics (BLS) Consumer Expenditure Surveys for 1996 and 1997, of revised Census Bureau Service Annual Survey (SAS) data for 1993–97, and of preliminary SAS data for 1998. Airline services were also revised down beginning with 1988, reflecting the incorporation of the 1992 I-O estimates.

Beginning with 1989, there were sizable upward revisions to medical care services, particularly to other professional medical services, reflecting the incorporation of the 1992 I-O accounts, revised SAS data for 1993–97, and preliminary SAS data for 1998.¹² In addition, there were sizable upward revisions to hospitals for 1996–98, particularly to government hospitals; the revisions were based on final fiscal year 1997 and preliminary 1998 Census Bureau data on State and local governments receipts and expenditures. Beginning with 1993, these upward revisions were partly offset by downward revisions to nursing homes, reflecting the incorporation of revised SAS data for 1993–97 and preliminary SAS data for 1998.

Beginning with 1988, recreational services, particularly “commercial participant amusements,” were revised up, reflecting the incorporation of the 1992 I-O accounts, revised SAS data for 1993–97, and preliminary SAS data for 1998.

Beginning with 1991, there were upward revisions to “other services”; prior to 1991, the revisions tended to be smaller and occasionally downward. The revisions primarily reflected revisions to personal business services—mainly to “services furnished without payment by financial intermediaries except life insurance carriers”—as a result of the redefinition of the value of imputed services of regulated investment companies and revisions to “expense for handling life insurance” as a result of the reclassification of government employee retirement plans. In addition, for most years, there were relatively small upward revisions to education and research, reflecting the incorporation of estimates of the expenses of private elementary and secondary schools from the Na-

tional Center for Education Statistics. Beginning with 1978, there were downward revisions to religious and welfare activities that tended to become larger over time, reflecting the removal of program service grants, specific assistance to (or for) members, and benefits paid to individuals from the operating expenses of social welfare organizations and of museums and libraries in the 1982, 1987, and 1992 Censuses of Services Industries.¹³ Beginning with 1988, there were upward revisions to net foreign travel that tended to become larger over time, reflecting the incorporation of the 1992 I-O estimates of ocean passenger fares that were based on data from the 1992 Census of Transportation, Communications, and Utilities.

Nonresidential structures.—In private fixed investment, nonresidential structures was revised up beginning with 1988 (table 5). The largest revisions were to utilities, to mining exploration, shafts, and wells and for 1997 and 1998, to nonresidential buildings. The revisions to utilities reflected the incorporation of 1992 I-O estimates and revised Census Bureau data on the value of construction put in place for electric light and power and for gas structures. The revisions to “mining” reflected the incorporation of 1992 I-O estimates, data from the joint association survey on drilling costs for 1997, and data from the American Petroleum Institute on petroleum drilling beginning with 1996. The revisions to nonresidential buildings reflected the incorporation of revised Census Bureau data on the value of construction put in place.

13. An analysis of reporting instructions for tax-exempt organizations revealed that amounts of gifts and grants were reported as expenses; subsequently, these amounts were removed in the 1992 I-O estimates because these payments are not classified as expenses of nonprofit organizations in the NIPA'S.

12. SAS data, unlike retail sales data, have not been benchmarked to the 1997 economic censuses data.

Equipment and software.—In private fixed investment, equipment and software (formerly producers' durable equipment) was revised up for all years. The revisions primarily reflected the recognition of business expenditures for software as investment. In addition, beginning with 1977, certain equipment was reclassified from one product type to another in order to reflect improvements made in classification during the preparation of the 1992 I-O accounts. This reclassification affected the following categories: Instruments; photocopy and related equipment; electrical equipment, not elsewhere classified (n.e.c.); metalworking machinery; special industry equipment, n.e.c.; and agricultural machinery, except tractors. The incorporation of the results of the 1992 I-O accounts also contributed to small upward revisions to equipment, beginning with 1988. Downward revisions to computers and peripheral equipment for 1996–98 primarily reflected an improved allocation of detailed imports and exports on the basis of data from the 1992 I-O accounts and revised estimates for shipments of computers based on preliminary data from the 1997 Census of Manufactures.

Residential fixed investment.—In private fixed investment, revisions to residential structures, beginning with 1988, were very small and mostly upward. For 1998, a sizable downward revision to the subcategory "residential improvements," which reflected the incorporation of newly available Census Bureau data on the value of construction put in place, was partly offset by upward revisions to single-family structures and to brokers' commissions.

Change in private inventories.—Change in private inventories (formerly change in business inventories) is calculated by adjusting inventories reported by businesses on a book-value basis to a current-period replacement-cost basis by removing inventory profits and losses. The inventory valuation adjustment (IVA), which is calculated as the change in private inventories less the change in book values, reflects inventory price changes for firms that value inventory withdrawals at acquisition (historical) cost. Except for 1997 and 1998, revisions to farm inventories were negligible; the downward revisions for those years largely reflected more complete U.S. Department of Agriculture (USDA) data on crop harvests and crop sales.¹⁴

14. The IVA is not needed for farm inventories, because they are measured on a current-market-price basis.

There were both upward and downward revisions to private nonfarm inventories. Prior to 1984, the revisions, which did not exceed \$2.0 billion, primarily reflected the use of economic census data on inventories for construction industries (beginning with 1959) and for mineral industries (beginning with 1977) in place of data on inventories from tabulations of tax returns by the Internal Revenue Service (IRS).¹⁵ Beginning with 1984, the revisions were generally larger and also reflected price revisions as a result of the incorporation of BEA's semiconductor price index, an improved price index for computer parts, and revised commodity weights from the 1992 I-O accounts. Beginning with 1993, preliminary information from the 1997 censuses of wholesale trade and retail trade also contributed to the revisions. Finally, a large upward revision for 1998 primarily reflected new source data for the motor vehicle and the mineral industries.

Net exports of goods and services.—Revisions to net exports of goods and services begin with 1986 and were relatively small (table 6). The revisions were primarily to exports and imports of services and reflected revised estimates from BEA's international transactions accounts (ITA's) that were not previously incorporated into the NIPA's.¹⁶

Government consumption expenditures and gross investment.—Government consumption expenditures and gross investment (hereafter referred to as government consumption and investment) was revised up for all years except for 1974–82 (table 7). This pattern of revisions generally follows that for Federal Government consumption and investment, which was revised up for all years except for 1973–83. The revisions to State and

15. See Moulton and Seskin, "Statistical Changes," 10.

16. The annual revisions of the ITA's are usually published in the July issue of the SURVEY, mostly recently in Christopher L. Bach, "U.S. International Transactions, Revised Estimates for 1982–98," SURVEY 79 (July 1999): 60–74.

local government consumption and investment were very small prior to 1991; thereafter, there were several large upward revisions, most notably for 1998.

For Federal Government consumption and investment, both national defense and nondefense were revised up; the revisions primarily reflected the recognition of software as investment, which added the general government consumption of fixed capital (CFC) for software to government consumption and added government enterprise expenditures for software to investment.¹⁷ The downward revisions for 1973–83 primarily reflected revised BEA prices that were used to calculate CFC for military aircraft.

17. In addition, general government expenditures for software (both purchased software and own-account production of software) were reclassified from government consumption expenditures to gross government investment.

For State and local government consumption and investment, upward revisions reflected the recognition of software as investment, which added the CFC for software to general government consumption and added government enterprise expenditures for software to investment.¹⁸ These revisions were mostly offset by downward revisions that reflected the reclassification to PCE of the administrative expenses of government employee retirement plans and of the expenditures for certain other programs, such as the Special Supplemental Nutrition Program for Women, Infants, and Children and adoption assistance.¹⁹ Beginning with 1991, the upward revisions also reflected the incorporation of data from newly available Census Bureau surveys of State and local governments; a large revision for 1998 primarily reflected the incorporation of preliminary data from Census Bureau surveys of State governments for fiscal year 1998.

Income-side components

Compensation of employees.—Compensation of employees was revised down for all years except for 1994 and 1998, reflecting downward revisions to supplements to wages and salaries and to wage and salary accruals (table 8).

18. See footnote 17.

19. See Moulton, Parker, and Seskin, "Definitional and Classificational Changes," 15–16.

Statistical	0	.5	3.1	6.9	1.2	4.0	5.9

For supplements, downward revisions to employer contributions for social insurance generally more than offset upward revisions to other labor income (OLI). For both components, the revisions primarily reflected the reclassification of government employee retirement plans, which shifted the contributions made by the governments to these plans from contributions for social insurance to OLI. In addition, within OLI, upward revisions to supplemental unemployment insurance reflected the incorporation of more complete source data and partly offsetting downward revisions reflected the reclassification of directors' fees from OLI to proprietors' income.²⁰

For wage and salary accruals, revisions were relatively small and downward prior to 1996. Larger downward revisions for 1996 and 1997 reflected downward revisions to "wage accruals less disbursements" (WALD) and to rest-of-the-world compensation.²¹ The revisions to WALD resulted from the incorporation of newly available BLS tabulations of wage and salary data on private employees covered by State unemployment insurance; the revisions to rest-of-the-world compensation resulted from revised ITA estimates. For 1998, newly available BLS data were also the major source of a large upward revision to wage and salary accruals.

Proprietors' income with inventory valuation adjustment (IVA) and capital consumption adjustment (CCAdj).—Prior to 1988, proprietors' income with IVA and CCAdj was revised by small amounts except for 1983, when there was a sizable upward revision (table 9). Beginning with 1988, larger upward revisions reflected upward revisions to nonfarm proprietors' income that more than offset downward revisions to farm proprietors' income.

Prior to 1996, the upward revisions to nonfarm proprietors' income primarily reflected an improved adjustment that removes a double-counting of the income of corporate partners.²² Beginning with 1996, the revisions also reflected the incorporation of corrected and newly available IRS tabulations of tax returns for sole

20. See Moulton, Parker, and Seskin, "Definitional and Classification Changes," 16–17.

21. WALD is the difference between wages earned, or accrued, and wages paid, or disbursed. In the NIPA's, wages accrued is the appropriate measure for national income, and wages disbursed is the appropriate measure for personal income. To estimate WALD, BEA converts annual disbursements data based on BLS tabulations of wages and salaries to an accrual basis. WALD consists of BEA estimates of bonus payments that are declared at the end of a year but that are actually paid the next year.

22. For additional details on this adjustment, see Moulton and Seskin, "Statistical Changes," 11.

proprietorships and partnerships for 1996 and 1997.

The downward revisions to farm proprietors' income primarily reflected the use of a new methodology for allocating farm income by legal form—between proprietors and corporations—that is based on USDA definitions rather than on a mixture of USDA and IRS definitions.²³ The revisions also reflected newly incorporated information on farm output, intermediate purchases, subsidies, and factor incomes from USDA.

Rental income of persons with CCAdj.—Rental income of persons with CCAdj was revised down for all years (table 10). The revisions primarily reflected the use of an improved methodology for estimating the income of persons from the rental of nonfarm nonresidential properties.²⁴ Beginning with 1994, the downward revisions also reflected the incorporation of revised and newly available source data from the Census Bureau's

domestic nonfinancial corporations were revised down for all years beginning with 1985, primarily reflecting revised estimates of the CCAdj and an improved adjustment to remove foreign earnings of U.S. corporations;²⁷ these downward revisions more than offset upward revisions that reflected the recognition of software as investment. Profits from the rest of the world were revised up beginning with 1982, reflecting revisions to the ITA's (see the section "Foreign transactions").

The CCAdj—the difference between depreciation based on tax return data and consumption of fixed capital (the NIPA estimate of depreciation)—was revised down beginning with 1972; these revisions primarily reflected the addition of software as investment, the adoption of a faster depreciation schedule for personal computers, and beginning with 1986, revisions to the BEA adjustment that removes amortization of intangibles from the tax-return-based measure.²⁸ Beginning with 1973, the corporate IVA was revised up for all years except for 1985 and 1986, reflecting revised commodity weights from the 1992 I-O accounts and revised price data (see the section "Change in private inventories").

Net interest.—Net interest was revised down for all years (table 12). The downward revisions primarily reflected the modified treatment of private noninsured pension plans and the incorporation of revised source data for interest paid by regulated investment companies. Beginning with 1988, the revisions were partly offset by a change in the methodology for adjusting the interest receipts of corporations with "captive" finance

27. For additional details on the improved adjustment to remove foreign earnings of U.S. corporations, see Moulton and Seskin, "Statistical Changes," 11-12.

28. See Moulton and Seskin, "Statistical Changes," 12-13.

subsidiaries.²⁹ The revisions also reflected the incorporation of revised and newly available source data: Beginning with 1982, from the Federal Reserve Board on mortgage debt outstanding; beginning with 1985, from BEA'S ITA's; and, beginning with 1996, from IRS tabulations of business tax returns.

Nonfactor incomes.—Nonfactor incomes—which comprises indirect business tax and nontax liability, business transfer payments, and “subsidiaries less current surplus of government enterprises”—was revised down for most years prior to 1985; thereafter, except for no revision for 1992, it was revised up (table 13).

Indirect business taxes was revised up beginning with 1986, primarily reflecting the use of an improved methodology that uses data from the Census Bureau's *Government Finances* survey as the annual source data for estimating most State and local government taxes.³⁰ The revisions for 1996–98 also reflected the incorporation of newly available data from the *Government Finances* survey.

Business transfer payments showed very small revisions beginning with 1985.

“Subsidiaries less current surplus of government enterprises” was revised down for most years. These revisions reflected upward revisions to the current surplus that partly resulted from the recognition of software as investment. Beginning with 1992, the revisions primarily reflected revisions to the Federal current surplus of enterprises, based on newly incorporated source data from agency annual reports.

Consumption of fixed capital (CFC).—CFC—that is, the charge for the using up of private and government fixed capital—was revised up for all years (table 14). The upward revisions, which increased rapidly over time, primarily reflected the recognition of software as investment; beginning with 1982, they also reflected the improved method for depreciating personal computers. Capital consumption allowances (CCA)—that is, tax-return-based depreciation for corporations and nonfarm proprietorships and BEA estimates of historical-cost depreciation (using consistent service lives) for farm proprietorships, for rental income of persons, and for nonprofit institutions serving individuals—was revised up for all years, primarily reflecting the addition of depreciation for software that was not included in IRS depreciation for corporations and for nonfarm sole proprietors and partners. For 1996–98, the revisions to CCA also reflected revised IRS tabulations of corporate income tax return data for 1996 and newly available tabulations for 1997.

Personal income and its disposition

Personal income was revised up for most years (table 15). The revisions were small prior to 1970; thereafter, they range from \$4.0 billion for 1970 to \$232.8 billion for 1998. The revisions reflected the previously described revisions to the components of national income that are included in personal income—wage and salary disbursements, other labor income, proprietors' income, and rental income of persons—and to the com-

ponents of personal income that are derived from related components of national income—personal dividend income and personal interest income. The revisions also resulted from revisions to transfer payments to persons and to personal contributions for social insurance.

The revisions to personal income mostly reflected the reclassification of government employee retirement plans, which raised personal

income by (1) the amount of employer contributions to these plans, which are added to other labor income, (2) dividends and interest received by these plans, which are added to personal dividend income and to personal interest income, and (3) personal contributions to these plans, which are no longer included in personal contributions for social insurance—a component that is deducted in the calculation of personal income.

The reclassification also reduced personal income by the amount of benefits paid by these plans, which are no longer included in government transfer payments to persons. The net effect of the reclassification was to raise personal income for all years.

Personal dividend income was revised up for most years. The revisions largely reflected the modified treatment of private noninsured pension plans and the reclassification of government employee retirement plans. Prior to 1982, the upward revisions were partly offset by downward revisions that reflected the exclusion of distributions of regulated investment companies (mutual funds) that reflect capital gains income. In the 1998 annual NIPA revision, the exclusion had been carried back to 1982; for this comprehensive revision, it will be carried back to 1946.

Personal interest income was revised up for most years. Upward revisions that reflected the inclusion of interest received by government employee retirement plans more than offset downward revisions that reflected the reclassification of dividend and rental income received by private noninsured pension plans from personal interest income to personal dividend income and to rental income of persons, respectively. Personal interest income was revised up while net interest was revised down, because the interest received by government employee retirement plans does not enter into the calculation of net interest.³¹ The revisions to personal interest income also reflected the incorporation of revised and newly available source data for estimating net interest (see the section “[Net interest](#)”), net interest paid by government (see the section “[Government receipts and expenditures](#)”), and interest paid by persons (see the section “[Personal outlays](#)”).

31. Personal interest income equals net interest plus interest paid by persons and by government less interest received by government (see addenda to [table 15](#)).

Transfer payments to persons was revised down for all years, primarily because in the reclassification of government employee retirement plans, the benefits from these plans are no longer treated as government transfer payments to persons ([table 16](#)).

Personal contributions for social insurance—which is subtracted in the calculation of personal income—was revised down for all years, because personal contributions to government employee retirement plans are no longer included.

Personal tax and nontax payments was revised down for all years, primarily reflecting the reclassification of estate and gift taxes as capital transfers.³²

Disposable personal income (DPI)—personal income less personal tax and nontax payments—was revised up for all years, reflecting the upward revisions to personal income and the downward revisions to personal tax and nontax payments.

Personal outlays—PCE, interest paid by persons, and personal transfer payments to the rest of the world (net)—was revised up for most years, primarily reflecting the revisions to PCE. Beginning with 1989, the revisions to personal outlays also reflect upward revisions to interest paid by persons—primarily reflecting the incorporation of revised data on consumer credit outstanding from the Federal Reserve Board—and to personal transfer payments to the rest of the world (net)—reflecting the reclassification (from the government sector to the personal sector) of government employee retirement payments to nonresident beneficiaries and the incorporation of revised ITA estimates for unilateral current transfers.

Personal saving—the difference between DPI and personal outlays—was revised up for all

32. See Moulton, Parker, and Seskin, “[Definitional and Classificational Changes](#),” 13–14.

years. The upward revisions were primarily accounted for by the reclassification of government employee retirement plans, which shifts the savings associated with these plans from the government sector to the personal sector; the reclassification of estate and gift taxes as capital transfers also raised personal saving and reduced government saving. The upward revisions to personal saving resulted in corresponding upward revisions to the personal saving rate—personal saving as a percentage of DPI—that ranged from 0.4 percentage point for 1959 to 3.2 percentage points for 1998. Nevertheless, the revised estimates retain the long-term downtrend in the rate that was present in the previously published estimates. For example, previously, the rate fell from a peak of 9.0 percent in 1982 to 0.5 percent in 1998; now, the rate falls from 10.9 percent to 3.7 percent. The large upward revision for 1998 also reflected the unusually large upward revision to wages and salaries (see the section “Compensation of employees”).

visions to contributions for social insurance that resulted from the reclassification of contributions received by Federal Government retirement plans and downward revisions to personal tax and non-tax receipts that resulted from the reclassification of estate and gift taxes as capital transfers. Statistical revisions to current receipts, which began with 1982, were relatively small and downward for most years.

Federal Government current expenditures was revised down for all years. The revisions reflected downward revisions to transfer payments that resulted from the reclassification of benefits paid by Federal employee retirement plans and downward revisions to grants-in-aid to State and local governments that resulted from the reclassification of investment grants as capital transfers. Beginning with 1960, the recognition of software as investment also contributed to the downward revisions because the sum of the amounts of purchased software and own-account compensation and other production costs (reclassified as investment) exceeded the amount of software consumption of fixed capital that was added to consumption expenditures. The downward revisions were partly offset by upward revisions to net interest paid that resulted from

Government current receipts and expenditures

Federal Government.—Federal Government current receipts was revised down for all years (table 17). The revisions reflected downward re-

the reclassification of interest received by Federal employee retirement plans to personal interest income. Statistical revisions to current receipts were generally small, with upward revisions for 1959–71 and downward revisions for most other years.

Prior to 1984, Federal Government net saving, as measured by the current surplus or deficit on a NIPA basis, was revised up for 14 years, revised down for 9 years, and unrevised for 2 years. Beginning with 1984, Federal net saving was revised down for all years, primarily reflecting the reclassification of government employee retirement plans, which shifted the savings associated with these plans from the government sector to the personal sector.

State and local government.—State and local government current receipts was revised down for all years, reflecting the downward revisions to contributions for social insurance that resulted from the reclassification of contributions received by State and local government retirement plans and the downward revisions to Federal grants-in-aid and to personal tax and nontax receipts that resulted from the reclassification of estate and gift taxes and of investment grants as capital transfers. Beginning with 1985, these downward revisions were partly offset by upward revisions to indirect business tax and nontax accruals, reflecting an improved methodology for estimating State and local government taxes.³³

State and local government current expenditures was revised down for 1959–79 and revised up thereafter. The pattern of revisions reflected the relative magnitude of offsetting revisions over the period: Transfer payments was revised down, reflecting the reclassification of benefits paid by State and local government employee retirement plans; net interest paid was revised up, reflecting the reclassification of interest received by the retirement plans to personal interest income; and dividends received—which is subtracted in the calculation of current expenditures—was revised down, reflecting the reclassification of dividends received by the retirement plans to personal dividend income. Consumption expenditures, the largest component of current expenditures, was revised up for 1959–77, down for 1978–95, and up for 1996–98; large upward revisions for 1997 and 1998 were more than accounted for by the incorporation of newly available source data from the Census Bureau surveys of State and local governments.

33. See Moulton and Seskin, "Statistical Changes," 13.

State and local government net saving, as measured by the current surplus or deficit on a NIPA basis, was revised down for all years. The revisions primarily reflected the reclassification of government employee retirement plans, which shifted the savings associated with these plans from the government sector to the personal sector, and the reclassification of estate and gift taxes.

Foreign transactions

Receipts from the rest of the world was unrevised prior to 1970, had small or no revisions for 1970–81, and had sizable upward revisions thereafter (table 18). The revisions to exports of goods and services, which begin with 1986, were relatively small except for 1998; an upward revision of \$7.3 billion for 1998 primarily reflected the incorporation of revised ITA estimates for exports of services. Upward revisions to income receipts, beginning with 1982, were primarily accounted for by corporate profits, reflecting the incorporation of improved ITA estimates of the current-cost adjustment and of other ITA estimates that were not previously incorporated into the NIPA's.³⁴ In addition, for 1986–98, the revisions to receipts reflected revisions to interest that also reflected the incorporation of revised ITA estimates.

Within payments to the rest of the world, the revisions to imports of goods and services be-

34. See Bach, "U.S. International Transactions," 65–67.

gan with 1992 and tended to be small except for a downward revision for 1992 and an upward revision for 1998. The revisions primarily reflected the incorporation of revised ITA estimates for imports of services. Beginning with 1982, income payments was revised mostly upward by relatively small amounts except for larger upward revisions for 1995–98. For most years prior to 1995, upward revisions to profits and to compensation more than offset downward revisions to interest. Beginning with 1995, all three of these subcomponents either were revised up or were unrevised; the revisions reflected the incorporation of revised ITA estimates. Prior to 1982, net foreign investment showed small or no revisions; thereafter, there were larger upward revisions, primarily reflecting the upward revisions to net receipts of income.

Gross saving and investment

Gross saving, or national saving—which consists of gross private saving and gross government saving—was revised down by small amounts for 1959–73 and up by larger amounts for 1974–98 (table 19). Upward revisions to gross private saving more than offset downward revisions to gross government saving. The upward revisions were primarily accounted for by the recognition of

software as investment, which added the consumption of fixed capital (CFC) for software to CFC for both the business and government sectors and increased both undistributed corporate profits and the government current surplus or deficit by small amounts.³⁵ (The downward revisions to undistributed corporate profits with IVA and CCADJ primarily reflected the revisions to the CCADJ.) As noted earlier, the revised treatment of government employee retirement plans did not affect national saving, but it raised personal saving (a component of gross private saving) and reduced the government current surplus or deficit (a component of gross government saving) by offsetting amounts. The reclassification of certain transactions as capital transfers reduced gross saving by small amounts. Finally, the large upward revision to wage and salary accruals for 1998 contributed to the upward revisions to personal saving and national saving for that year.

Gross investment—which consists of gross private domestic investment, gross government investment, and net foreign investment—was revised up for all years except 1959. The revisions were primarily to gross private domestic investment and to gross government investment and

35. For details on the effects of this definitional change on specific components, see Moulton, Parker, and Seskin, "Definitional and Classificational Changes," 8–11.

reflected the recognition of software as investment. In addition, beginning with 1982, net foreign investment was revised up by sizable amounts, reflecting the incorporation of improvements to the ITA's that were not previously incorporated into the NIPA's.

Annual Estimates of Real GDP and Real DPI

In general, revisions to real GDP reflect three factors: (1) Revisions to the current-dollar components of GDP for which chained-dollar estimates are prepared by deflation, (2) revisions to the prices used to estimate components of real GDP by deflation, and (3) revisions to the quantities used to estimate components of real GDP by extrapolation or direct valuation. The reference year was shifted to a more recent year, 1996, but because the price and quantity indexes and chained-dollar estimates are measured with chain-type indexes, the change of the reference year does not, by itself, affect the percent changes of these series.

For 1959-98, the revised chained-dollar estimates of real GDP showed an average annual growth rate of 3.4 percent, 0.2 percentage point higher than was shown in the previously published estimates (table 20). The growth rates were revised up for most major components of GDP. The growth rate of equipment and software was revised up the most. The growth rates of PCE for nondurable goods, nonresidential structures, and national defense consumption expenditures

and gross investment were also revised up substantially. The growth rates of PCE for durable goods, residential fixed investment, and imports of goods and services were unrevised.

The revisions to the growth rate of real GDP for the entire 1959-98 period can be divided into three subperiods: 1959-77, 1977-92, and 1992-98. For 1959-77, the growth rate was unrevised at 3.7 percent. For 1977-92, it was revised up 0.3 percentage point to 2.9 percent, reflecting the incorporation of geometric-mean-type CPI's back to 1978 (see the section "Annual Prices"), the recognition of software as investment, and the improved estimates of unpriced banking services.³⁶ For 1992-98, the growth rate was revised up 0.4 percentage point to 3.6 percent, reflecting the increasing importance of software over this period, the improved estimates of unpriced banking services, and the incorporation of newly available source data—including the geometric-mean-type CPI's for 1992-94—that affected the estimates for that period.

Annual changes.—For 1959-91, the annual, or year-to-year, percent changes in real GDP were revised up for 21 of the 33 years; the changes for 1961, 1963-65, and 1967 were unrevised; and the changes for 1962, 1971-73, 1976, and 1977 were revised down (chart 1). Upward revisions of 0.5 percentage point or more were recorded in 4 years (1979, 1987, 1990, and 1991); the largest

Addendum:						
Disposable personal income	4.6	4.8	.2	2.5	2.8	.3

revision was for 1991, when the change in real GDP was revised from -0.9 percent to -0.2 percent.

For 1992-98, the percent changes in real GDP were revised up for all years. The largest revisions were for 1992 (up 0.6 percentage point to 3.3 percent) and for 1997 (up 0.6 percentage point to 4.5 percent).

Real disposable personal income (DPI).—For 1959-98, the revised estimates of real DPI showed an average annual growth rate of 3.5 percent, 0.2 percentage point higher than was shown in the previously published estimates (table 20). For 1959-92, the average annual growth rate was 3.6 percent, also 0.2 percentage point higher; for 1992-98, the growth rate was 2.8 percent, 0.3 percentage point higher.

Annual Prices

Revisions to the chain-type price indexes result from the incorporation of revised and newly available source data and of revised weights into the chain formula.³⁷

For 1959-98, the revised chain-type estimates for gross domestic purchases prices showed an average annual growth rate of 4.1 percent, 0.1 percentage point lower than the previously published

estimate (table 21). For GDP prices, the revised growth rate was 4.0 percent, 0.2 percentage point lower than the previously published estimate.

For 1959-92, the revised chain-type estimates for gross domestic purchases prices showed an average annual growth rate of 4.5 percent, 0.1 percentage point lower than the previously published estimate. For GDP prices, the average annual growth rate was 4.4 percent 0.2 percentage point lower than the previously published estimate.

For 1992-98, the revised chain-type estimates for gross domestic purchases prices showed an average annual growth rate of 1.8 percent, the same as the previously published estimate. For GDP prices, the average annual growth rate was 1.9 percent, 0.1 percentage point lower than the previously published estimate.

For 1959-92, the largest revisions were to the prices of PCE for nondurable goods and to the prices of national defense. The revisions to the prices of PCE for nondurable goods reflected the incorporation of geometric-mean-type CPI's back to 1978.³⁸ The revisions to the prices of national defense reflected both the incorporation of revised prices that were used to calculate CFC for military aircraft and the calculation of chain-type price indexes at a more detailed level than in the previously published estimates.

37. For a discussion of the new price measures introduced in this comprehensive revision, see Moulton and Seskin, "Statistical Changes," 13-15.

38. See Moulton and Seskin, "Statistical Changes," 16-17.

Addendum:									
Gross domestic purchases	4.2	4.1	-0.1	4.6	4.5	-0.1	1.8	1.8	0

For 1992–98, the largest revisions were upward to prices of nonresidential structures, of nonresidential equipment and software, of residential structures, and of imports and downward to prices of PCE for durable goods and of Federal nondefense.

Quarterly Real GDP

Revisions to quarterly (and monthly) NIPA estimates reflect the revisions to the annual estimates, the incorporation of new and revised monthly and quarterly source data (including the updating of seasonal factors), and the introduction of changes in methodology.

This section focuses on the impact of revisions on business cycles, as measured by turning points in quarterly real GDP, particularly on the most recent cycles (table 22) and on the most recent quarters (table 23).

For the period beginning with 1959, there are no changes in the timing of business cycle peaks and troughs. Of the six contractions since 1959, all have less steep declines except the contraction that began in the third quarter of 1969; for that contraction, the decline was unrevised. The largest revision was for the contraction that began in the second quarter of 1990; the average quarterly percent change in real GDP (at annual rates) is now –1.8 percent, compared with –2.7 percent in the previously published estimates.

Of the five complete expansions since 1959, two now have stronger increases, two have weaker increases, and one was unrevised. The largest upward revision was for the expansion that began in the third quarter of 1982; the average quarterly percent change is 4.1 percent, compared with 3.8 percent in the previously published estimates.

For the current expansion, which began in the first quarter of 1991, the average quarterly percent change through the second quarter of 1999 is now 3.5 percent, compared with 3.1 percent in the previously published estimates.

Of the 34 quarters of the current expansion, the quarter-to-quarter percent change in real GDP was revised up for 25 quarters and revised down for 9 quarters (chart 2). The revisions averaged 0.5

percentage point (at annual rates, without regard to sign).

In the current expansion, the two largest quarterly revisions were 1.5 percentage points: For the fourth quarter of 1991, the increase was revised up to 2.5 percent, primarily reflecting the upward revision to the current-dollar estimate for the change in private nonfarm inventories; for the fourth quarter of 1994, the increase was revised up to 5.1 percent, primarily reflecting upward revisions to the current-dollar estimates for equipment and software and for the change in private nonfarm inventories.

Changes in Methodology

Comprehensive revisions provide the opportunity to introduce new and improved methodologies. Most of the methodological changes that were introduced in this comprehensive revision were described in the October SURVEY article on statistical changes; an additional change is described in this section. In addition, the definitional change that recognized software as investment required the development of methodologies to prepare these estimates. The methodology for the annual estimates was described in a "Technical Note" in the August SURVEY article on definitional and classificational changes;³⁹ the methodology for the quarterly estimates is described in this section.

New deflator for imputed unpriced services of regulated investment companies

Beginning with 1959, the imputed value of unpriced services of regulated investment companies—that is, mutual funds—has been redefined to equal operating expenses.⁴⁰ Under the new definition, operating expenses of regulated investment companies are measured as the amount reported on their Federal income tax return as "total deductions" plus BEA estimates of implicit charges by security dealers and of the imputed value of unpriced services charged by other financial intermediaries.

Accordingly, the methodology for estimating the real value of unpriced services has been changed. "Total deductions" and unpriced services charged by other financial intermediaries are now deflated with a composite index prepared

from the producer price index and the employment cost index; the reference-year value of the implicit charges by security dealers is extrapolated by the number of orders placed by regulated investment companies. Previously, the real value of the unpriced services was estimated by extrapolating the reference-year value by the hours worked by employees of regulated investment companies with no adjustment for changes in the productivity of these employees.

The change in methodology mostly affects PCE because these services are predominantly furnished to persons, but it also has a small effect on State and local government consumption expenditures.

Methodology for quarterly software estimates

Like most of the components of GDP, the annual estimates of software are based on source data that are more comprehensive and reliable than those available for the quarterly estimates.⁴¹ The quarterly estimates are prepared by interpolating and extrapolating the annual levels, using as indicators source data whose changes are similar to the changes in the annual estimates and—when such indicator series are not available—using mathematical techniques that generate smooth quarterly changes or using judgmental trends. More detailed information about the annual and quarterly estimates of software will be posted early next year on BEA's Web site at <www.bea.doc.gov>.

Current-dollar investment estimates.—Table 24 summarizes the source data used as indicators for calculating the quarterly estimates of current-dollar software investment.

Purchased software.—The source data used for prepackaged and custom software are essentially identical. For 1959–75, quarterly estimates for both types of software were prepared using interpolation without an indicator series. For 1976–87, the indicator series for both types of software was unemployment insurance (UI) wage and salary data for SIC 7372 (computer programming services and prepackaged software). For 1988–98, the indicator series for custom and for prepackaged software were UI data for SIC 7371 (computer programming services) and SIC 7372 (prepackaged software), respectively.⁴² For 1999, these UI

40. See Moulton, Parker, and Seskin, "Definitional and Classificational Changes," 14.

41. See Moulton, Parker, and Seskin, "Definitional and Classificational Changes," 17–20.

42. Beginning with 1988, the UI wage and salary data reflected a change introduced in the 1987 SIC that created separate industries for custom and prepackaged software.

series were used to extrapolate the quarterly estimates; until the UI series become available, a judgmental trend is used. (UI wage and salary data are available with a two-quarter lag for the advance and the preliminary current-quarterly estimates and with a one-quarter lag for the final current-quarterly estimates.)

Own-account software.—Beginning with 1959, a lagged three-quarter moving average of private fixed investment in computers and peripheral equipment was used as the indicator series for business software and for State and local government software. A lagged three-quarter moving average of Federal Government investment in computers and peripheral equipment was used as the indicator series for Federal Government software.

Price estimates.—Table 25 summarizes the source data used as indicators for calculating the quarterly estimates of software prices. Real quarterly software investment at the most detailed level was derived by deflation—that is, by dividing the current-dollar quarterly investment flows by price indexes.⁴³

Prepackaged software.—For 1959–96, this price index was prepared by interpolation without an indicator series. For 1997, the indicator series was

a quarterly version of BEA’s matched-model price index for prepackaged software, which was linked to the producer price index (PPI) for “prepackaged software—applications software” (PPI 73722) that BLS began publishing in December 1997; this PPI was used as the indicator series thereafter.

Custom software.—Beginning with 1959, this price index was prepared using as the indicator series a weighted average (25 percent prepackaged software and 75 percent business own-account software) of the percent changes in the price indexes for prepackaged software and for business own-account software (described next).

Business own-account software.—This price index was prepared using as the indicator series a weighted average of price indexes for intermediate inputs, for compensation of computer programmers, and for compensation of computer systems analysts. For all quarters, the intermediate inputs price index was based primarily on detailed PPI estimates. For 1959–79, the price indexes for compensation of computer programmers and of systems analysts were estimated without an indicator series. Beginning with 1980, the employment cost index for “total compensation, all workers, private industry” was used as the indicator series. The compensation price indexes and the intermediate inputs price index were combined using a Fisher chain-type

43. Aggregate measures of software, such as “all business” or “all government” were calculated using the Fisher index-number formula.

Table 24.—Indicator Series for Quarterly Estimates of Current-Dollar Software Investment

Software type	1959-75	1976-87	1988-98	1999
Prepackaged	Interpolated without an indicator series.	Wages in SIC 7372 (1972); eight-quarter moving average lag (BLS: Wages of workers covered by State unemployment insurance).	Wages in SIC 7372 (1987); eight-quarter moving average lag (BLS: Wages of workers covered by State unemployment insurance).	Wages in SIC 7372 (1987); eight-quarter moving average lag (BLS: Wages of workers covered by State unemployment insurance). ¹
Custom	Interpolated without an indicator series.	Wages in SIC 7372 (1972); eight-quarter moving average lag (BLS: Wages of workers covered by State unemployment insurance).	Wages in SIC 7371 (1987); eight-quarter moving average lag (BLS: Wages of workers covered by State unemployment insurance).	Wages in SIC 7371 (1987); eight-quarter moving average lag (BLS: Wages of workers covered by State unemployment insurance). ¹
Business own-account	NIPA current-dollar private fixed investment, computers and peripheral equipment; three-quarter moving average lag.	NIPA current-dollar private fixed investment, computers and peripheral equipment; three-quarter moving average lag.	NIPA current-dollar private fixed investment, computers and peripheral equipment; three-quarter moving average lag.	NIPA current-dollar private fixed investment, computers and peripheral equipment; three-quarter moving average lag.
Federal own-account	NIPA current-dollar Federal Government gross investment, computers and peripheral equipment; three-quarter moving average lag.	NIPA current-dollar Federal Government gross investment, computers and peripheral equipment; three-quarter moving average lag.	NIPA current-dollar Federal Government gross investment, computers and peripheral equipment; three-quarter moving average lag.	NIPA current-dollar Federal Government gross investment, computers and peripheral equipment; three-quarter moving average lag.
State and local own-account	NIPA current-dollar private fixed investment, computers and peripheral equipment; three-quarter moving average lag.	NIPA current-dollar private fixed investment, computers and peripheral equipment; three-quarter moving average lag.	NIPA current-dollar private fixed investment, computers and peripheral equipment; three-quarter moving average lag.	NIPA current-dollar private fixed investment, computers and peripheral equipment; three-quarter moving average lag.

1. Current-quarterly wages are projected based on previous quarters' wages.

 SIC Standard Industrial Classification

formula to calculate the indicator series for the business own-account software price index.

Government own-account software.—Separate price indexes for Federal Government and for State and local government own-account software were calculated using the same methodology as that used for business, but using different compensation price indexes. For Federal Government own-account software, an adjusted NIPA price index for Federal nondefense compensation was used to estimate the programmer and systems analyst price indexes.⁴⁴ For State and local government own-account software, the NIPA price index for compensation of State and local government noneducation employees was used.

Consumption of fixed capital (CFC) and business incomes.—Quarterly estimates of CFC for each

software category were calculated as the product of quarterly estimates of real CFC—derived by interpolating annual estimates without an indicator series—and quarterly software price indexes. Estimates for the current quarters were prepared as the product of judgmental projections of real CFC and the current-quarterly software prices described earlier. Real CFC was calculated separately for total investment, for business and government investment, and within government, for Federal Government defense and nondefense and for State and local government. In addition, separate estimates were prepared for Federal Government enterprises, for State and local government enterprises, and for nonprofit institutions serving individuals. For capital consumption allowances and the other adjustments to business incomes, separate estimates were not prepared; the CFC's for these components were assumed to change quarterly in a manner similar to the components of which they are a part.

Appendixes A and B follow. 

44. The adjustment changes the NIPA treatment of pay raises by distributing the amount throughout the entire year; in the published compensation series, pay raises are usually allocated to the first quarter. This adjustment eliminates the volatility in the own-account investment series that would have appeared in the real own-account software investment series.

Table 25.—Indicator Series for Quarterly Estimates of Software Prices

Software type	1959-79	1980-96	1997	1998-99
Prepackaged	Interpolated without an indicator series.	Interpolated without an indicator series.	BEA monthly matched-model index.	Producer price index 73722 (all applications software).
Custom	Prepackaged software index and business own-account software index.	Prepackaged software index and business own-account software index.	Prepackaged software index and business own-account software index.	Prepackaged software index and business own-account software index.
Business own-account	BEA own-account software intermediate inputs index; compensation interpolated without an indicator series.	BEA own-account software intermediate inputs index and BLS employee compensation index, all workers, private industry.	BEA own-account software intermediate inputs index and BLS employee compensation index, all workers, private industry.	BEA own-account software intermediate inputs index and BLS employee compensation index, all workers, private industry.
Federal own-account	BEA own-account software intermediate inputs index and Federal Government nondefense compensation price index.	BEA own-account software intermediate inputs index and Federal Government nondefense compensation price index.	BEA own-account software intermediate inputs index and Federal Government nondefense compensation price index.	BEA own-account software intermediate inputs index and Federal Government nondefense compensation price index.
State and local own-account	BEA own-account software intermediate inputs index and State and local government noneducation compensation price index.	BEA own-account software intermediate inputs index and State and local government noneducation compensation price index.	BEA own-account software intermediate inputs index and State and local government noneducation compensation price index.	BEA own-account software intermediate inputs index and State and local government noneducation compensation price index.

National Income and Product Accounts Tables

This section presents the revised annual estimates for 1995–98 and the revised quarterly estimates for the first quarter of 1996 through the third quarter of 1999 for most of the full set of national income and product accounts (NIPA) tables; the estimates for GDP and other major NIPA series for 1959–99 are presented beginning on page 132. These estimates reflect the recently released comprehensive revision of the NIPAs, which is described in the article that precedes this section.

The redesign of the NIPA tables was described in Brent R. Moulton and David F. Sullivan, "A Preview of the 1999 Comprehensive Revision of the National Income and Product Accounts: New and Redesigned Tables," SURVEY OF CURRENT BUSINESS 79 (September 1999): 15–28. Some of the table titles have changed slightly since the publication of that article.

Tables 3.13, 3.15–3.20, 5.16, 8.28, and 9.1–9.6 are not yet available on the revised basis. Tables 3.13 and 8.28 are scheduled to be published in the January 2000 SURVEY. Tables 3.15–3.17 are scheduled to be published in the SURVEY in the spring of 2000 along with an article that discusses the improved presentation of the estimates in these tables. The remaining tables are scheduled to be published in the March 2000 SURVEY.

The historical NIPA estimates (for most tables, back to 1959), are available on the BEA Web site at <www.bea.doc.gov> and on the STAT-USA Web site at <www.stat-usa.gov>.

The tables contain annual, quarterly, and monthly estimates, indicated as follows:

A	Only annual estimates
Q	Only quarterly estimates
QA	Quarterly and annual estimates
MA	Monthly and annual estimates

Summary Tables

Table A.—Summary National Income and Product Accounts, 1998

[Billions of dollars]

Account 1.—National Income and Product Account

Line		Line	
1	Compensation of employees	36	Personal consumption expenditures (2-3)
2	Wage and salary accruals	37	Durable goods
3	Disbursements (2-7)	38	Nondurable goods
4	Wage accruals less disbursements (3-8 and 5-5)	39	Services
5	Supplements to wages and salaries	40	Gross private domestic investment (5-1)
6	Employer contributions for social insurance (3-16)	41	Fixed investment
7	Other labor income (2-8)	42	Nonresidential
8	Proprietors' income with inventory valuation and capital consumption adjustments (2-9)	43	Structures
9	Rental income of persons with capital consumption adjustment (2-10)	44	Equipment and software
10	Corporate profits with inventory valuation and capital consumption adjustments	45	Residential
11	Corporate profits with inventory valuation adjustment	46	Change in private inventories
12	Profits before tax	47	Net exports of goods and services
13	Profits tax liability (3-13)	48	Exports (4-1)
14	Profits after tax	49	Imports (4-3)
15	Dividends (2-12)	50	Government consumption expenditures and gross investment (3-1 and 5-2)
16	Undistributed profits	51	Federal
17	Inventory valuation adjustment	52	National defense
18	Capital consumption adjustment	53	Nondefense
19	Net interest (2-15)	54	State and local
20	National income		
21	Business transfer payments		
22	To persons (2-19)		
23	To the rest of the world (4-8)		
24	Indirect business tax and nontax liability (3-14)		
25	Less: Subsidies less current surplus of government enterprises (3-7)		
26	Consumption of fixed capital (5-7)		
27	Private (5-8)		
28	Government (5-9)		
29	General government (5-10)		
30	Government enterprises (5-11)		
31	Gross national income		
32	Less: Income receipts from the rest of the world (4-2)		
33	Plus: Income payments to the rest of the world (4-4)		
34	Gross domestic income		
35	Statistical discrepancy (5-13)		
	GROSS DOMESTIC PRODUCT		GROSS DOMESTIC PRODUCT

Account 2.—Personal Income and Outlay Account

Line		Line	
1	Personal tax and nontax payments (3-12)	7	Wage and salary disbursements (1-3)
2	Personal outlays	8	Other labor income (1-7)
3	Personal consumption expenditures (1-36)	9	Proprietors' income with inventory valuation and capital consumption adjustments (1-8)
4	Interest paid by persons (2-17)	10	Rental income of persons with capital consumption adjustment (1-9)
5	Personal transfer payments to the rest of the world (net) (4-6)	11	Personal dividend income
6	Personal saving (5-4)	12	Dividends (1-15)
		13	Less: Dividends received by government (3-6)
		14	Personal interest income
		15	Net interest (1-19)
		16	Net interest paid by government (3-5)
		17	Interest paid by persons (2-4)
		18	Transfer payments to persons
		19	From business (1-22)
		20	From government (3-3)
		21	Less: Personal contributions for social insurance (3-17)
	PERSONAL TAXES, OUTLAYS, AND SAVING		PERSONAL INCOME

Table A.—Summary National Income and Product Accounts, 1998—Continued

[Billions of dollars]

Account 3.—Government Receipts and Expenditures Account

Line		Line	
1	Consumption expenditures (1-50) 1,261.0	12	Personal tax and nontax payments (2-1) 1,072.6
2	Transfer payments 965.2	13	Corporate profits tax liability (1-13) 240.2
3	To persons (2-20) 954.8	14	Indirect business tax and nontax liability (1-24) 677.0
4	To the rest of the world (net) (4-7) 10.4	15	Contributions for social insurance 621.9
5	Net interest paid (2-16) 276.4	16	Employer (1-6) 306.0
6	Less: Dividends received by government (2-13) 3	17	Personal (2-21) 315.9
7	Subsidies less current surplus of government enterprises (1-25) 20.8		
8	Less: Wage accruals less disbursements (1-4) 0		
9	Current surplus or deficit (-), national income and product accounts (5-12) 88.7		
10	Federal 46.9		
11	State and local 41.7		
	GOVERNMENT CURRENT EXPENDITURES AND SURPLUS 2,611.8		GOVERNMENT CURRENT RECEIPTS 2,611.8

Account 4.—Foreign Transactions Account

Line		Line	
1	Exports of goods and services (1-48) 966.3	3	Imports of goods and services (1-49) 1,115.9
2	Income receipts (1-32) 285.3	4	Income payments (1-33) 295.2
		5	Transfer payments to the rest of the world (net) 42.0
		6	From persons (net) (2-5) 22.3
		7	From government (net) (3-4) 10.4
		8	From business (1-23) 9.3
		9	Net foreign investment (5-3) -201.5
	RECEIPTS FROM THE REST OF THE WORLD 1,251.6		PAYMENTS TO THE REST OF THE WORLD 1,251.6

Account 5.—Gross Saving and Investment Account

Line		Line	
1	Gross private domestic investment (1-40) 1,531.2	4	Personal saving (2-6) 229.7
2	Gross government investment (1-50) 268.7	5	Wage accruals less disbursements (private) (1-4) 3.5
3	Net foreign investment (4-9) -201.5	6	Undistributed corporate profits with inventory valuation and capital consumption adjustments 257.2
		7	Consumption of fixed capital (1-26) 1,066.9
		8	Private (1-27) 880.8
		9	Government (1-28) 186.2
		10	General government (1-29) 158.6
		11	Government enterprises (1-30) 27.6
		12	Government current surplus or deficit (-), national income and product accounts (3-9) 88.7
		13	Statistical discrepancy (1-35) -47.6
	GROSS INVESTMENT 1,598.4		GROSS SAVING AND STATISTICAL DISCREPANCY 1,598.4

NOTE.—Numbers in parentheses indicate accounts and items of counterentry in the accounts. For example, line 7 of account 1 is shown as "other labor income (2-8)"; the counterentry is shown in account 2, line 8.

Table S.1.—Summary of Percent Change From Preceding Period in Real Gross Domestic Product and Related Measures
[Percent]

	Line	Seasonally adjusted at annual rates																		
		1995	1996	1997	1998	1996				1997				1998				1999

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories is the difference between gross domestic product and the sum of final sales of domestic product and of change in private inventories; The residual line following structures is the difference between gross domestic product and the sum of the detailed lines of goods, of services, and of structures.

Percent changes from preceding period for gross domestic product and for final sales of domestic product are shown in table 8.1.

Chain-type quantity indexes for the series in this table are shown in table 7.17.

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Percent changes from preceding period for selected series in this table are shown in table 8.1. Chain-type quantity indexes for selected series in this table are shown in table 7.2.

1. Equals gross domestic product less gross product of households and institutions and of general government.
2. Equals gross domestic business product less gross farm product.
3. Equals compensation of general government employees plus general government consumption of fixed capital as shown in table 3.8.

current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines. Chain-type quantity indexes for the series in this table are shown in table 7.14.

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.

2. Gross national income deflated by the implicit price deflator for gross national product.

NOTE.—Except as noted in footnotes 1 and 2, chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because

the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Table 1.12.—Net Domestic Product by Sector
[Billions of dollars]

	Line	1995	1996	1997	1998
Net domestic product	1	6,488.3	6,856.8	7,291.1	7,693.0
Business ¹	2	5,422.2	5,748.8	6,141.3	6,493.6

State and local	12	542.4	548.4	556.7	564.0
Residual	13	-2	.1	-1.2	-4

1. Equals net domestic product less net product of households and institutions and of general government.
2. Equals net domestic business product less net farm product.
3. Equals compensation of general government employees as shown in table 3.8.

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Chained-dollar gross product of nonfinancial corporate business equals the current-dollar product deflated by the implicit price deflator for goods and structures in gross domestic product. Effective with the estimates scheduled for release on March 30, 2000, the current-dollar product will be deflated by a chain-type price index calculated using gross product price indexes for each nonfinancial industry.

2. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100.

3. Chained-dollar net product of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital.

2. Personal Income and Outlays

1. Consists of aid to families with dependent children and, beginning with 1996, assistance programs operating under the Personal Responsibility and Work Opportunity Reconciliation Act of 1996.

2. Equals disposable personal income deflated by the implicit price deflator for personal consumption expenditures.

NOTE.—Percent changes from preceding period for disposable personal income are shown in table 8.1.

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

The residual line is the difference between the first line and the sum of the most detailed lines. See notes and footnotes to table 2.4.

						Residual	102	-2.6	.2	-3.3	-17.1

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

The residual line is the difference between the first line and the sum of the most detailed lines. Chain-type quantity indexes for the series in this table are shown in table 7.5. The figures in parentheses are the line numbers of the corresponding items in table 2.4.

Table 2.8.—Personal Income by Type of Income

[Billions of dollars; months seasonally adjusted at annual rates]

Year and month	Personal income	Wage and salary disbursements							Other labor income	Proprietors' income with inventory valuation and capital consumption adjustments		Rental income of persons with capital consumption adjustment	Personal dividend income	Personal interest income	Transfer payments to persons	Less: Personal contributions for social insurance
		All industries	Private industries					Government		Farm	Nonfarm

October	6,073.9	832.8	1,787.9	3,461.8

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.
2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transferred to foreign countries by the Federal Government.
3. Compensation of government employees engaged in new own-account investment and related expenditures

for goods and services are classified as investment in structures and in software. The compensation of all general government employees is shown in the addenda.
4. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets.

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

See footnotes to table 3.7.

Chain-type quantity indexes for the series in this table are shown in table 7.11.

Contributions to percent change in real government consumption expenditures and gross investment are shown in table 8.6.

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transferred to foreign countries.

3. Compensation of government employees engaged in new own-account investment and related expenditures

for goods and services are classified as investment in structures and in software. The compensation of all general government employees is shown in the addendum.

4. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets.

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the line in the addendum.

Chain-type indexes for the series in this table are shown in table 7.12. See footnotes to table 3.10.

1. Consists of payments for medical services for dependents of active duty military personnel at nonmilitary facilities.

2. Consists of mustering out pay, terminal leave pay, and adjusted compensation benefits.

3. Consists largely of payments to nonprofit institutions, aid to students, and payments for medical services for retired military personnel and their dependents at nonmilitary facilities.

4. Consists of aid to families with dependent children and, beginning with 1996, assistance programs operating under the Personal Responsibility and Work Opportunity Reconciliation Act of 1996.

5. Consists of expenditures for food under the supplemental program for women, infants, and children; foster care; adoption assistance; and payments to nonprofit welfare institutions.

6. Consists largely of veterans benefits, Alaska dividends, and crime-victim payments.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. Chain-type quantity indexes for the series in this table are shown in table 7.9.

Equals: Net foreign investment, NIPA's (39—44)	50	-98.0	-110.7	-123.7	-201.5

1. Exports and imports of gold in the NIPA's differ from those in the ITA's. ITA gold exports (line 2) and imports (line 19) are excluded from the NIPA's; imports of gold in the NIPA's (line 21) is the excess of the value of gold in gross domestic purchases over the value of U.S. production of gold.

2. Consists of statistical revisions to the ITA's that have not yet been incorporated into the NIPA's and statistical revisions to the NIPA's that have not yet been incorporated into the ITA's.

3. Consists of transactions between the United States and its territories, Puerto Rico, and the Northern Mariana Islands. The treatment of U.S. territories, Puerto Rico, and the Northern Mariana Islands in the NIPA's differs from that in the ITA's. In the NIPA's, they are included in the rest of the world; in the ITA's, they are treated as part of the United States. The adjustment to unilateral current transfers, net (line 43) consists only of transfer payments from persons, because transfer payments, subsidies, and grants-in-aid from the Federal Government to residents of U.S. territories, Puerto Rico, and the Northern Mariana Islands are excluded from NIPA transfer payments to the rest of the world.

4. Transfers of goods and services under military grant programs, net, are classified as exports and as unilateral current transfers in the ITA's. In the NIPA's, these transactions are excluded from exports and from transfer payments and are included in Federal Government consumption expenditures. Beginning with 1988, the ITA's classify certain items as military grants that the NIPA's do not.

5. Beginning with 1988, the ITA's classify certain items as military grants that the NIPA's do not. In the NIPA's these transactions are excluded from exports and included in transfer payments from government.

6. In the ITA's, income transactions between parents and affiliates are recorded on a net basis. In ITA exports, U.S. parents' receipts from foreign affiliates for interest are net of such payments by U.S. parents to foreign affiliates. In ITA imports, U.S. affiliates' payments to foreign parents for interest are net of such receipts by U.S. affiliates from foreign parents. In the NIPA's, these transactions are recorded on a gross basis. The amount of the adjustment is identical in payments and in income receipts and, thus, does not affect NIPA net income receipts or net foreign investment.

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; change in inventories is included in government consumption expenditures.

NOTES.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. Chain-type quantity indexes for the series in this table are shown in table 7.19.

1. Consists of office buildings, except those constructed at industrial sites and those constructed by utilities for their own use.
2. Consists of stores, restaurants, garages, service stations, warehouses, mobile structures, and other buildings used for commercial purposes.
3. Consists of hotels and motels, buildings used primarily for social and recreational activities, and buildings not elsewhere classified, such as passenger terminals, greenhouses, and animal hospitals.
4. Consists primarily of streets, dams and reservoirs, sewer and water facilities, parks, and airfields.
5. Consists primarily of dormitories and of fraternity and sorority houses.

1. Includes new computers and peripheral equipment only.
 2. Excludes software "embedded," or bundled, in computers and other equipment.
 NOTES.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.
 Chain-type quantity indexes for the series in this table are shown in table 7.8.
 n.e.c. Not elsewhere classified.

1. This series is derived from the Census Bureau series "current cost inventories."

2. The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underlying inventories

derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.

3. Inventories of auto and home supply stores are included in "other durable goods."

1. Inventories of auto and home supply stores are included in "other durable goods."

NOTE.—Chained (1996) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at an-

nual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

1. Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in the private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at

annual rates.

2. Inventories of auto and home supply stores are included in "other durable goods."

3. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross product of households and institutions and of general government, and it includes a small amount of final sales by farm and by government enterprises.

Equipment and software	59	6.2	6.9	7.5	8.2

NOTES.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

Chain-type quantity indexes for the series in this table are shown in table 7.13. See footnotes to table 5.14.

6. Income, Employment, and Product by Industry

Table 6.1C.—National Income Without Capital Consumption Adjustment by Industry Group
[Billions of dollars]

1. Reflects the reclassification of air couriers from trucking and warehousing to transportation by air.
2. Consists of museums, botanical and zoological gardens; engineering and management services; and services, not elsewhere classified.
3. Includes Coast Guard.
4. Includes estimates of foreign professional workers and undocumented Mexican migratory workers employed temporarily in the United States.

NOTE.—Estimates in this table are based on the 1987 Standard Industrial Classification (SIC).

1. Beginning with 1993, includes estimates of foreign professional workers and undocumented Mexican migratory workers employed temporarily in the United States.

NOTE.—Estimates in this table are based on the 1987 Standard Industrial Classification (SIC).

1. Equals the number of full-time equivalent employees plus the number of self-employed persons. Unpaid family workers are not included.

2. Reflects the reclassification of air couriers from trucking and warehousing to transportation by air.

3. Consists of museums, botanical and zoological gardens; engineering and management services; and services, not elsewhere classified.

4. Includes Coast Guard.

5. Beginning with 1993, includes estimates of foreign professional workers and undocumented Mexican migratory workers employed temporarily in the United States.

NOTE.—Estimates in this table are based on the 1987 Standard Industrial Classification (SIC).

NOTES.—Chain-type quantity and price indexes are calculated from weighted averages of the detailed output and prices used to prepare each aggregate and component. Implicit price deflators are weighted averages of the detailed price indexes used to prepare each aggregate and component and are calculated as the ratio of current- to chained-

dollar output multiplied by 100.

Percent changes from preceding period for items in this table are shown in table 8.1. Contributions to the percent change in real gross domestic product are shown in table 8.2.

1. Consists of office buildings, except those constructed at industrial sites and those constructed by utilities for their own use.

2. Consists of stores, restaurants, garages, service stations, warehouses, mobile structures, and other buildings used for commercial purposes.

3. "Other" consists of hotels and motels, buildings used primarily for social and recreational activities, and buildings not elsewhere classified, such as passenger terminals, greenhouses, and animal hospitals.

4. Consists primarily of streets, dams and reservoirs, sewer and water facilities, parks, and airfields.

5. Consists primarily of dormitories and of fraternity and sorority houses.

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.
 2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transferred to foreign countries by the Federal Government.
 3. Compensation of government employees engaged in new own-account investment and related expenditures

for goods and services are classified as investment in structures and in software. The compensation of all general government employees is shown in the addenda.
 4. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets.

Compensation of general government employees ³	36	104.43	100.00	96.39	93.36	Compensation of general government employees ³	72	93.84	100.00	102.92	105.38

1. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

2. Consumption expenditures for durable goods excludes expenditures classified as investment, except for goods transferred to foreign countries.

3. Compensation of government employees engaged in new own-account investment and related expenditures

for goods and services is classified as investment in structures and in software. The compensation of all general government employees is shown in the addendum.

4. Consumption of fixed capital, or depreciation, is included in government consumption expenditures as a partial measure of the value of the services of general government fixed assets; use of depreciation assumes a zero net return on these assets.

1. Consists of general government and government enterprise expenditures for fixed assets.

2. Structures and software include compensation of government employees engaged in new own-account investment and related expenditures for goods and services.

3. Consists of Department of Defense new structures, except family housing.

4. Consists primarily of general office buildings, police and fire stations, courthouses, auditoriums, garages, and passenger terminals.

5. Consists primarily of electric and gas facilities, transit systems, and airfields.

1. Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment were reclassified from goods to services.

NOTE.—The quantity indexes on which the estimates in this table are based are shown in tables 7.10. The estimates in this table differ from those in table 8.2 because this table shows contributions to real exports and to real imports, whereas table 8.2 shows contributions to real gross domestic product. As a result, the contributions of components of real imports have a positive sign, whereas in table 8.2, they have a negative sign.

1. Except for exports and imports, consists of new trucks only.

2. Consists of final sales and change in private inventories of new autos assembled in the United States.

3. Consists of personal consumption expenditures, private fixed investment, and gross government investment.

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996

current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

Chain-type quantity indexes for the series in this table are shown in table 7.18B.

Livestock	10	.3	-1.1	-4	-7
Less: Intermediate goods and services purchased	11	132.2	130.4	134.7	137.4
Intermediate goods and services, other than rent	12	117.9	114.3	119.2	121.9
Rent paid to nonoperator landlords	13	14.3	16.1	15.5	15.5
Equals: Gross farm product	14	85.5	92.2	103.1	100.5
Less: Consumption of fixed capital	15	25.1	25.4	25.8	26.3
Equals: Net farm product	16	60.3	66.8	77.7	74.2

NOTE.—Chained (1996) dollar series are calculated as the product of the chain-type quantity index and the 1996 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Table 8.13.—Real Housing Sector Output, Real Gross Product, and Real Net Product
[Billions of chained (1996) dollars]

	Line	1995	1996	1997	1998
Housing output ¹	1	734.0	742.3	755.9	775.2

Addendum:					
Capital consumption adjustment for national income (4+13+19+26)	27	-8.2	3.8	21.4	32.1

1. Except for farm proprietorships and partnerships (line 14) and other private business (line 18), the capital consumption adjustment is calculated in two parts. The adjustment for consistent accounting at historical cost converts depreciation, based on the service lives and depreciation schedules employed by firms when filing their income tax returns, to consistent service lives and empirically based depreciation schedules. The adjustment for current-replacement cost converts the historical-cost series with consistent accounting to a current-replacement-cost series. For farm proprietorships and partnerships and for other private business, the historical-cost series is based on consistent service lives and empirically based depreciation schedules so, the adjustment reflects only a conversion to current-replacement cost.

Table 8.16.—Business Transfer Payments by Type
[Billions of dollars]

	Line	1995	1996	1997	1998
Business transfer payments	1	33.5	34.4	36.9	38.1

Personal interest income (58+64+65) or (29+51)	66	792.5	810.6	854.9	897.8

1. Excludes interest paid or received by government enterprises, which is included in the government sector.
2. Consists of interest paid on the deposit liabilities of commercial and mutual savings banks, savings and loan associations, and credit unions.

3. Interest received by nonfinancial sole proprietorships and partnerships is considered interest received by persons and is included in line 29.

NOTE.—In this table, imputed interest paid (line 38) is the difference between the property income received by financial intermediaries from the investment of depositors' or beneficiaries' funds and the interest paid by them to business, persons, governments, and the rest of the world. In table 8.21, imputed interest (line 155)—the interest component of imputations that affect gross national product—consists of the imputed interest paid by financial intermediaries other than life insurance carriers to persons and government and of the interest paid on owner-occupied housing and on buildings and equipment owned and used by nonprofit institutions serving individuals.

						191	5,692.1	6,015.9	6,387.1	6,758.8	
						Excluding imputations (180-181)					

1. Residential dwellings owned and used by nonprofit institutions serving individuals are included in owner-occupied housing categories.

2. Includes services furnished without payment by financial intermediaries except life insurance carriers to government employee retirement plans.

3. Classified as a service in exports of goods, services, and income receipts and as an income payment in imports of goods, services, and income payments.

4. For general government employees, recorded as compensation of employees (wages and salaries) and as a sale; government consumption expenditures is not affected. Similar payments for employees of government enterprises are not included in government consumption expenditures; they are deducted in the calculation of the surplus of government enterprises.

5. Health insurance premiums paid by employers are included in the calculation of the "health insurance" category of personal consumption expenditures (PCE); life insurance premiums paid by employers are included in the calculation of the "expenses of handling life insurance and pension plans" category of PCE.

6. Consists of the programs for which a social insurance fund is imputed, and for which contributions are set equal to benefits paid. These payments are funded directly out of the current budget. The specific programs consist of workers' compensation, unemployment insurance, and medical services for the dependents of active duty military personnel at nonmilitary facilities. Source data are not available for the corresponding treatment for similar State and local government programs. Similar payments for employees of government enterprises are not included in government consumption expenditures; they are deducted in the calculation of the surplus of government enterprises.

7. Consists of owner-occupant purchases of new single-family dwellings, including manufactured homes, expenditures on improvements, and payments of commissions on new and existing residential dwellings, less sales of dwellings to government. The series is calculated from the investment data prepared as part of BEA's capital stock estimates. It differs from the investment data shown in table 5.6 because the series shown in that table reflect total purchases by private business.

8. Excludes investment by nonprofit institutions serving individuals in residential properties, which is included in owner-occupant investment (see footnote 1) and in sales of existing structures to governments. The series is calculated from the investment data prepared as part of BEA's capital stock estimates. It differs from the investment data shown in table 5.6 because the series shown in that table reflect total purchases by private business.

9. The consumption of fixed capital (CFC) of government enterprises is not included in government consumption expenditures; it is deducted in the calculation of the current surplus of government enterprises and is recorded as part of total government CFC.

10. Includes gross investment of government enterprises.

NOTE.—"Imputations" are transactions recorded in the national income and product accounts that are not transactions of the market economy. In this table, the imputations shown in the "specific imputations" section are those that affect gross national product (GNP). In table 8.20, imputed interest paid by life insurance carriers (line 41) consists of the property incomes earned on life insurance and pension reserves. These incomes are considered to be incomes received by persons and not by the insurance carriers; this "transfer" is not considered an imputation for purposes of table 8.21, because it does not affect GNP.

Equals: Consumption of fixed capital, NIPA's	24	75.2	77.8	81.1	85.0

1. Consists of intangible assets that the IRS allows to be amortized.
2. Consists of depreciation or amortization of the following items: Breeding, dairy, and work animals; motion picture films; rental videocassettes; and rental clothing.
3. Consists of depreciation of employees' motor vehicles reimbursed by business and depreciation of business motor vehicles charged to current expense.
4. Beginning with 1981, included in IRS depreciation (line 1).
5. Consists of depreciation of assets owned by Federal Reserve banks, Federally sponsored credit agencies, credit unions, and nonprofit institutions serving business; depreciation of interest paid by public utilities for own-account investment prior to 1987 (beginning with 1987, included in line 1).
6. Consists of depreciation or amortization of rental videocassettes and rental clothing.

Table 8.23.—Relation of Nonfarm Proprietors' Income in the National Income and Product Accounts (NIPA's) to Corresponding Measures as Published by the Internal Revenue Service (IRS)

Earnings of U.S. residents remitted by their unincorporated foreign affiliates	36	6.0	7.0		
Equals: Net corporate dividend payments, NIPA's	37	254.2	297.7	333.7	348.6

1. Consists largely of an adjustment to expense all meals and entertainment, of oilwell bonus payments written off, of adjustments for insurance carriers and savings and loan associations, of amortization of intangible assets, and of tax-exempt interest income.
2. Consists of the Farm Credit System for 1947 forward and the Federal home loan banks for 1952 forward.
3. Consists of nonprofit organizations serving business and of credit unions.
4. Includes the imputed financial service charge paid by corporations to domestic securities dealers who do not charge an explicit commission.
5. Beginning with 1984, the investment tax credit is included in other tax credits (line 26).
6. Consists largely of an adjustment to remove capital gains distributions of regulated investment companies.

Table 8.26.—Relation of Monetary Interest Paid and Received in the National Income and Product Accounts (NIPA's) to Corresponding Measures as Published by the Internal Revenue Service (IRS)

[Billions of dollars]

Nonfarm proprietorships and partnerships					
Interest received by financial sole proprietorships and partnerships, IRS	25	25.0	35.4	45.3	
Equals: Monetary interest received by sole proprietorships and partnerships, NIPA's	26	25.0	35.4	45.3	51.8

1. Consists of interest paid by nonprofit organizations serving business and by credit unions.
 2. Consists of construction interest capitalized on tax returns, interest reported on tax returns in cost of goods sold, and interest passed through to shareholders by small business corporations.
 3. Consists of nonprofit organizations serving business, of credit unions, and of other tax-exempt interest received by commercial banks and nonlife insurance carriers.
 4. Consists of interest received by credit agencies and finance companies reported as business receipts on tax returns and of interest passed through to shareholders by small business corporations.

Table 8.27.—Relation of Wages and Salaries in the National Income and Product Accounts (NIPA's) to Wages and Salaries as Published by the Bureau of Labor Statistics (BLS)

[Billions of dollars]

	Line	1995	1996	1997	1998 ^a
Total wages and salaries, BLS ¹	1	3,215.9	3,414.7	3,669.5	3,967.8
Plus: Adjustment for misreporting on employment tax returns ²	2	78.1	83.5	89.9	97.4
Adjustment for thrift savings plans ³	3	5.3	3.1	1.5	0
Adjustment for selected industries ⁴	4	114.6	113.6	114.7	118.2
Other ⁵	5	10.7	11.6	13.3	2.7
Equals: Wage and salary disbursements, NIPA's	6	3,424.7	3,626.5	3,888.9	4,186.0
Plus: Wage accruals less disbursements, NIPA's	7	16.4	3.6	-4.1	3.5
Equals: Wage and salary accruals, NIPA's	8	3,441.1	3,630.1	3,884.7	4,189.5

1. Total annual wages of workers covered by State unemployment insurance (UI) laws and by the Unemployment Compensation for Federal Employees program. Data for the most recent year are preliminary.
 2. Consists of unreported wages and salaries paid by employers and of unreported tips.
 3. Consists of voluntary contributions by employees. Prior to 1985, employers were not required to report these contributions. In 1985, reporting requirements were enacted by over one half of the States; by 1990, the requirement had been enacted by almost all States.
 4. For the following industries, consists of the difference between estimates from more comprehensive source data (excluding the adjustments in lines 2 and 3) and BLS wages and salaries: Agriculture, forestry, and fishing; railroad transportation; health services; educational services; social services; membership organizations; private households; and the Federal Government.
 5. Consists of wages and salaries for insurance agents classified as statutory employees, for students and their spouses employed by public colleges or universities, for nonprofit organizations not participating in the UI program (in industries not listed in footnote 4), and of other coverage adjustments.

Table 8.29.—Capital Transfers (Net)

[Billions of dollars]

	Line	1995	1996	1997	1998
Capital transfers received by government (net)	1	19.6	23.1	26.8	32.6
Federal	2	-12.8	-10.7	-8.4	-3.6
Estate and gift taxes paid by persons	3	14.9	17.5	20.6	25.2
Less: Capital transfers paid to the rest of the world (net) ¹	4	.4	0	.2	0
Less: Federal investment grants to State and local governments ²	5	27.2	28.1	28.8	28.8
Less: Investment grants to business ³	6	0	0	0	0
State and local	7	32.3	33.8	35.3	36.2
Estate and gift taxes paid by persons	8	5.1	5.6	6.5	7.4
Federal investment grants to State and local governments ²	9	27.2	28.1	28.8	28.8
Capital transfers received by the rest of the world (net)	10	.3	-1.0	0	-1.0
Capital transfers received from U.S. government (net)	11	.4	0	.2	0
Less: Immigrants' transfers received by persons (net) ⁴	12	.1	.1	.2	.2

1. Consists of forgiveness of debts owed by foreign governments to the U.S. Government.
 2. Consists of Federal Government investment grants for highways, transit, air transportation, and water treatment plants.
 3. Consists of maritime construction subsidies paid by the Federal Government.
 4. Consists of a limited measure of immigrants' transfers to the United States (transfers of funds by individuals moving across borders).

GDP and Other Major NIPA Series, 1959–99

TABLES 1–4 PRESENT historical series from the national income and product accounts (NIPA's). Table 1 presents current-dollar gross domestic product and its components. Tables 2A and 2B present real gross domestic product and its components, in chained dollars and in index form, respectively. Table 3 presents NIPA price indexes, and

table 4 presents national income and personal income. These estimates are updated quarterly and are available on the BEA Web site at <www.bea.doc.gov>; for information, call 202–606–5304. The estimates are also available on the STAT-USA Web site at <www.stat-usa.gov>; for information, call 202–482–1986.

Table 1.—Gross Domestic Product

(Billions of dollars; quarterly estimates are seasonally adjusted at annual rates)

Year and quarter	Gross domestic product	Personal consumption expenditures				Gross private domestic investment							Net exports of goods and services			Government consumption expenditures and gross investment			Final sales of domestic product	Gross national product	Percent change from preceding period		
		Total	Durable goods	Non-durable goods	Services	Total	Fixed investment				Change in private inventories	Net	Exports	Imports	Total	Federal	State and local	Gross domestic product			Final sales of domestic product		
							Total	Nonresidential		Residential												Exports	Imports

See footnotes and note at the end of the table.

NOTE: Chained (1996) dollars (and chain-type quantity indexes) provide the best available measures of how a particular series changes over time. However, users of this table are cautioned that comparisons across chained (1996) dollar components of GDP may be misleading, particularly for periods before 1987, when the residual is sometimes quite large. Accurate estimates can be made of the contributions of components to the percent change in GDP; these estimates are provided in NIPA table 8.2. Additional historical data may be found on BEA's Web site at <www.bea.doc.gov>.

For a more detailed discussion of the use of chained dollars, including a method for closely approximating contributions to changes in real GDP for longer periods, see "BEA's Chain Indexes, Time Series, and Measures of Long-Term Economic Growth" in the May 1997 SURVEY OF CURRENT BUSINESS. Additional versions of NIPA table 1.2 that use alternative reference years will be posted on BEA's Web site in early 2000. Tables 1.2A, 1.2B, 1.2C, and 1.2D will be based on chained 1937, 1952, 1972, and 1982 dollars, respectively.

Table 2A.—Real Gross Domestic Product—Continued
 [Billions of chained (1996) dollars; quarterly estimates are seasonally adjusted at annual rates]

Year and quarter	GDP	Personal consumption expenditures	Gross private domestic investment	Exports and imports of goods and services		Government ¹	Residual	Final sales of domestic product	Gross domestic purchases	Final sales to domestic purchasers	GNP	Percent change from preceding period

1. Government consumption expenditures and gross investment.

GDP Gross domestic product

NOTE.—The residual is the difference between GDP and the sum of the detailed components shown in this table.

GNP Gross national product

Table 2B.—Chain-Type Quantity Indexes for Gross Domestic Product

[Index numbers, 1996=100; quarterly estimates are seasonally adjusted]

Year and quarter	Gross domestic product	Personal consumption expenditures				Gross private domestic investment						Exports and imports of goods and services		Government consumption expenditures and gross investment			Final sales of domestic product	Gross national product	
		Total	Durable goods	Non-durable goods	Services	Total	Fixed investment				Exports	Imports	Total	Federal	State and local				
							Total	Nonresidential		Residential									
								Total	Structures							Equipment and software

Table 3.—Price Indexes for Gross Domestic Product and Gross Domestic Purchases

[Index numbers, 1996=100; quarterly estimates are seasonally adjusted]

Year and quarter	Chain-type price indexes																	Implicit price deflators		Percent change from preceding period for chain-type price indexes		
	GDP	Personal consumption expenditures				Private fixed investment					Exports and imports of goods and services		Government ¹			Gross domestic purchases	GNP	GDP	GNP	GDP	Gross domestic purchases	GNP
						Total	Nonresidential		Residential	Total			Federal	State and local								
		Total	Durable goods	Non-durable goods	Services		Total	Structures			Equipment and software	Exports			Imports

1. Real DPI in chained (1996) dollars. Derived by deflation using the implicit price deflator for personal consumption expenditures.

CCAj Capital consumption adjustment

DPI Disposable personal income

IVA Inventory valuation adjustment

SUBJECT GUIDE

VOLUME 79 (1999)

This guide lists the major items that were published in the 1999 issues of the SURVEY OF CURRENT BUSINESS. It gives the month of the issue and the beginning page number, and it includes selected boxes that are cited by title and page number.

General

- 2000 Release Dates for BEA Estimates (October): 96 and (December): 150
 1999 Release Dates for BEA Estimates (January): 42
 Robert Eisner's Contributions to Economic Measurement (January): 8
 A Tour of BEA's Web Site (March): 22
 Wassily Leontief and His Contributions to Economic Accounting (March): 9

National

Federal budget estimates

- Fiscal Year 2000 (March): 12

Inventories, sales, and inventory-sales ratios for manufacturing and trade

- Third Quarter 1998 (January): 6
 Fourth Quarter 1998 (April): 9
 First Quarter 1999 (July): 6
 Second Quarter 1999 (October): 18

National income and product accounts (NIPA's)

Business Situation

Advance Estimates

- Fourth Quarter 1998 (February): 1
 Upcoming Comprehensive Revision of the National Income and Product Accounts, 7 [box]
 First Quarter 1999 (May): 1
 BEA Estimates of Wages and Salaries for 1998, 6 [box]
 Second Quarter 1999 (August): 1

Preliminary Estimates

- Fourth Quarter 1998 (March): 1
 First Quarter 1999 (June): 1
 Second Quarter 1999 (September): 1
 Third Quarter 1999 (December): 1

Final Estimates

- Third Quarter 1998 (January): 1
 Fourth Quarter 1998 (April): 1
 First Quarter 1999 (July): 1
 Second Quarter 1999 (October): 1

Comprehensive revision

- Improved Estimates for the National Income and Product Accounts for 1959-98: Results of the Comprehensive Revision (December): 15
 Initial Results of the 1999 Comprehensive Revision (November): 1
 A Preview of the 1999 Comprehensive Revision
 Definitional and Classificational Changes (August): 7
 New and Redesigned Tables (September): 15
 Statistical Changes (October): 6
 Note on the Personal Saving Rate (February): 8
 Note on Rates of Return for Domestic Nonfinancial Corporations, 1960-98 (June): 13

Satellite accounts

- Assessing BEA's Prototype Integrated Economic and Environmental Satellite Accounts (November): 44
 The Future of Environmental and Augmented National Accounts: An Overview (November): 45
 Overall Appraisal of Environmental Accounting in the United States (November): 50

State and local government fiscal position

- In 1998 (April): 11
 State Tobacco Settlements, 12 [box]

International

Direct investment positions: Country and industry detail

- For 1998 (July): 48

Foreign direct investment in the United States

Detail for Historical-Cost Position and Related Capital and Income Flows

In 1998 (September): 29

New Investment in 1998 (June): 16

Preliminary Results From the 1997 Benchmark Survey (August): 21

New Industry Classifications [box], 24

Regional Patterns in the Location of Foreign-Owned Manufacturing Establishments (May): 8

Reconciliation of the U.S.-Canadian current account

Estimates for 1997 and 1998 (November): 66

U.S. direct investment abroad

Detail for Historical-Cost Position and Related Capital and Income Flows

In 1998 (September): 58

U.S. international investment position

In 1998 (July): 36

U.S. international services

Cross-Border Trade in 1998 and Sales Through Affiliates in 1997 (October): 48

U.S. international transactions

Quarterly Estimates

Third Quarter 1998 (January): 12

Fourth Quarter and Year 1998 (April): 18

First Quarter 1999 (July): 75

Second Quarter 1999 (October): 20

Revised Estimates

For 1982-98 (July): 60

Upcoming Changes in the Classification of Current and Capital Transactions in the U.S. International Accounts (February): 10

U.S. Resource Flows to Developing Countries and Multilateral Organizations, 1993-97 (February): 12

U.S. multinational companies

Operations in 1997 (July): 8

Regional**Gross state product**

Estimates for 1995-97 (June): 24

Local area personal income

Announcement of Availability of the Estimates (January): 11

Estimates for 1982-97 (May): 50

Alternative Measures of County Employment and Wages, 53 [box]

Per capita personal income

Estimates for 1998 (May): 28

State personal income

Quarterly Estimates

Third Quarter 1998 (February): 16

Upcoming Comprehensive Revision of State and Local Area Personal Income, 16 [box]

Fourth Quarter and Year 1998 and Per Capita Personal Income for 1998 (May): 28

Note on the Estimates of State Personal Income, 28 [box]

First Quarter 1999 (August): 57

Second Quarter 1999 (November): 81

^p Preliminary.

^r Revised.

1. Reflects adjustments necessary to bring the Census Bureau's component data in line with the concepts and definitions used to prepare BEA's international and national accounts.

2. Contains goods that cannot be separately identified.

13. Conceptually, line 76 is equal to "net foreign investment" in the national income and product accounts (NIPAs). However, the foreign transactions account in the NIPAs (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial

pension plans except life insurance carriers and private noninsured pension plans.

14. The "European Union" includes the "European Union (6)," United Kingdom, Denmark, Ireland, Greece, Spain, and Portugal. Beginning with the first quarter of 1995, the "European Union" also includes Austria, Finland, and Sweden.

15. The "European Union (6)" includes Belgium, France, Germany (includes the former German Democratic Republic (East Germany) beginning in the fourth quarter of 1990), Italy, Luxembourg, Netherlands, European Atomic Energy Community, European Coal and Steel Community, and European Investment Bank.

16. Includes, as part of international and unallocated, the estimated direct investment in foreign affiliates engaged in international shipping, in operating oil and gas drilling equipment internationally, and in petroleum trading. Also includes taxes withheld; current-cost adjustments associated with U.S. and foreign direct investment; small transactions in business services that are not reported by country; and net U.S. currency flows, for which geographic

source data are not available.

17. Details not shown separately; see totals in lines 56 and 63.

18. Details not shown separately are included in line 69.

NOTE.—The data in tables F.2 and F.3 are from tables 1 and 10 in "U.S. International Transactions, Second Quarter 1999" in the October 1999 issue of the SURVEY OF CURRENT BUSINESS, which presents the most recent estimates from the international transactions accounts.

^P Preliminary.^R Revised.

1. Patented techniques, processes, and formulas and other intangible property rights that are used in goods production.

2. Copyrights, trademarks, franchises, rights to broadcast live events, and other intangible property rights.

3. Other unaffiliated services receipts (exports) include mainly expenditures of foreign governments and international organizations in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film rentals.

NOTE.—The data in this table are from table 3 in "U.S. International Transactions, Second Quarter 1999" in the October 1999 issue of the SURVEY OF CURRENT BUSINESS, which presents the most recent estimates from the international transactions accounts.

^r Preliminary.^r Revised.

1. Represents gains or losses on foreign-currency-denominated assets due to their revaluation at current exchange rates.

2. Includes changes in coverage, statistical discrepancies, and other adjustments to the value of assets.

3. Reflects changes in the value of the official gold stock due to fluctuations in the market price of gold.

4. Reflects changes in gold stock from U.S. Treasury sales of gold medallions and commemorative and bullion coins; also reflects replenishment through open market purchases. These demonetizations/monetizations are not included in international transactions capital flows.

5. Also includes paid-in capital subscriptions to international financial institutions and outstanding amounts of miscellaneous claims that have been settled through international agreements to be payable to the U.S. Government over periods in excess of 1 year. Excludes World War I debts that are not being serviced.

6. Includes indebtedness that the borrower may contractually, or at its option, repay with its currency, with a third country's currency, or by delivery of materials or transfer of services.

7. Primarily U.S. Government liabilities associated with military sales contracts and other transactions arranged with or through foreign official agencies.

NOTE.—The data in this table are from table 1 in "International Investment Position of the United States at Yearend 1998" in the July 1999 issue of the SURVEY OF CURRENT BUSINESS.

NOTES.—In this table, unlike in the international transactions accounts, income and capital inflows are shown without a current-cost adjustment, and income is shown net of withholding taxes. In addition, unlike in the international investment position, the direct investment position is valued at historical cost.

The data in this table are from tables 16 and 17 in "Foreign Direct Investment in the United States: Detail for Historical-Cost Position and Related Capital and Income Flows, 1998" in the September 1999 issue of the Survey.

1. The industry classification system used to classify the data for U.S. affiliates is based on the North American Industry Classification System. Prior to 1997, the affiliate data were classified

using an industry classification system based on the Standard Industrial Classification system.

NOTE.—The data in this table are from "Foreign Direct Investment in the United States: Preliminary Results from the 1997 Benchmark Survey" in the August 1999 issue of the SURVEY.

H. International Perspectives

Quarterly data in this table are shown in the middle month of the quarter.

1. All exchange rates are from the Board of Governors of the Federal Reserve System.

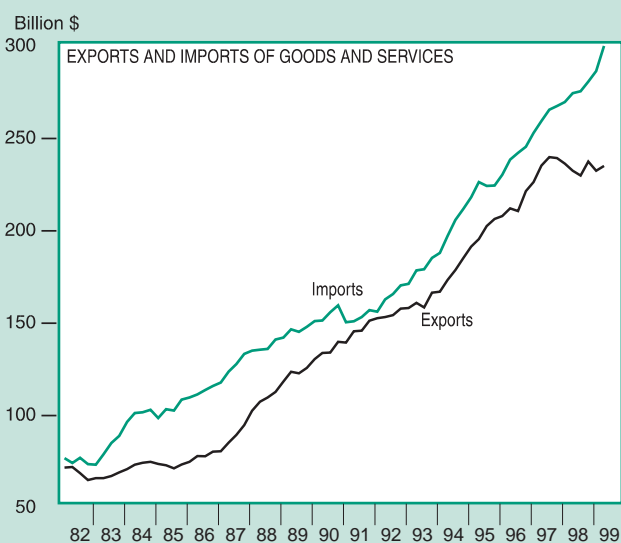

2. As of January 1, 1999, the euro is reported in place of the individual euro-area currencies. These currency rates can be derived from the euro rate by using the following conversion rates: 1 euro = 6.55957 French francs, 1.95583 German marks, and 1936.27 Italian lire. The rate shown for the United States is an index of the weighted average of the foreign exchange value of the U.S. dollar against the currencies of a broad group of major U.S. trading partners, January 1997=100. For more information on the exchange rate indexes, see "New Summary Meas-

ures of the Foreign Exchange Value of the Dollar," *Federal Reserve Bulletin*, vol. 84 (October 1998), pp. 811-18.

NOTE.—U.S. interest rates, unemployment rates, and GDP growth rates are from the Federal Reserve, the Bureau of Labor Statistics, and BEA, respectively. All other data (including U.S. consumer prices and U.S. share prices, both of which have been rebased to 1995 to facilitate comparison) are © OECD, November 1999, *OECD Main Economic Indicators* and are reproduced with permission of the OECD.

THE U.S. IN THE INTERNATIONAL ECONOMY

Regional Data

J. State and Regional Tables

The tables in this section include the most recent estimates of State personal income and gross state product. The sources of these estimates are noted.

The quarterly and annual State personal income estimates and the gross state product estimates are available on diskettes or CD-ROM. For information on State personal income, E-mail reis.remd@bea.doc.gov; write to the Regional Economic Information System, BE-55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5360. For information on gross state product, E-mail gspread@bea.doc.gov; write to the Regional Economic Analysis Division, BE-61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202-606-5340.

NOTE.—The personal income level shown for the United States is derived as the sum of the State estimates. It differs from the national income and product accounts (NIPA's) because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data. In particular, it differs from the NIPA estimate because, by defini-

tion, it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms.

Source: Tables 1 and 2 in "State Personal Income, First Quarter 1999" in the August 1999 issue of the SURVEY.

1. Per capita personal income and per capita disposable personal income were computed using midyear population estimates from the Bureau of the Census.

NOTE.—The personal income level shown for the United States is derived as the sum of the State estimates. It differs from the national income and product accounts (NIPA's) because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing

of the availability of source data. In particular, it differs from the NIPA estimate because, by definition, it omits the earnings of Federal civilian and military personnel stationed abroad and of U.S. residents employed abroad temporarily by private U.S. firms.

Source: Tables 1 and 2 in "State Personal Income, First Quarter 1999" in the August 1999 issue of the SURVEY.

Table J.4.—Gross State Product for States and Regions by Industry, 1997

NOTE.—Totals shown for the United States differ from the national income and product account estimates of gross domestic product (GDP) because GSP is derived from gross domestic income, which differs from GDP by the statistical discrepancy. In addition, GSP excludes and GDP includes the compensation of Federal civilian and military personnel stationed abroad and government consumption of fixed capital for military structures located abroad and for military equipment except domestically located office equipment. GSP and GDP also have different revision

schedules.

Additional Information About the NIPA Estimates

Statistical Conventions

Changes in current-dollar GDP measure changes in the market value of goods and services produced in the economy in a particular period. For many purposes, it is necessary to decompose these changes into quantity and price components. To compute the quantity indexes, changes in the quantities of individual goods and services are weighted by their prices. (Quantity changes for GDP are often referred to as changes in "real GDP.") For the price indexes, changes in the prices for individual goods and services are weighted by quantities produced. (In practice, the current-dollar value and price indexes for most GDP components are determined largely using data from Federal Government surveys, and the real values of these components are calculated by deflation at the most detailed level for which all the required data are available.)

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the 1997–98 annual percent change in real GDP uses prices for 1997 and 1998 as weights, and the 1997–98 annual percent change in the GDP price index uses quantities for 1997 and 1998 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula.¹ These annual changes are "chained" (multiplied) together to form time series of quantity and price; the percent changes that are calculated from these time series are not affected by the choice of reference period.

The quarterly changes in quantities and prices are calculated with weights from two adjacent quarters. As part of an annual or comprehensive revision, the quarterly indexes through the most recent complete year are adjusted to ensure that the average of the quarterly indexes conforms to the corresponding annual index.

In addition, BEA prepares measures of real GDP and its components in a dollar-denominated form, designated "chained (1996) dollar estimates." These estimates are computed by multiplying the 1996 current-dollar value of GDP, or of a GDP component, by the corresponding quantity index number. For example, if a current-dollar GDP component equaled \$100 in 1996 and if real output for this component increased by 10 percent in 1997, then the "chained (1996) dollar" value of this component in 1997 would be \$110 (\$100

× 1.10). Note that percentage changes in the chained (1996) dollar estimates and the percentage changes calculated from the quantity indexes are identical, except for small differences due to rounding.

Because of the formula used for calculating real GDP, the chained (1996) dollar estimates for detailed GDP components *do not add* to the chained-dollar value of GDP or to any intermediate aggregates. A "residual" line is shown as the difference between GDP and the sum of the most detailed components shown in each table. The residual generally is small close to the base period but tends to become larger as one moves further from it. Accurate measures of component contributions to the percentage changes in real GDP and its major components are shown in NIPA tables 8.2–8.6.

BEA also publishes the "implicit price deflator" (IPD), which is calculated as the ratio of current-dollar value to the corresponding chained-dollar value, multiplied by 100; the values of the IPD and of the corresponding "chain-type" price index are very close.

For quarters and months, the estimates are presented at annual rates, which show the value that would be registered if the rate of activity measured for a quarter or a month were maintained for a full year. Annual rates are used so that time periods of different lengths—for example, quarters and years—may be compared easily. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or 12 (for monthly data).

Percent changes in the estimates are also expressed at annual rates. Calculating these changes requires a variant of the compound interest formula:

$$r = \left[\left(\frac{X_t}{X_o} \right)^{m/n} - 1 \right] \times 100,$$

where r is the percent change at an annual rate;
 X_t is the level of activity in the later period;
 X_o is the level of activity in the earlier period;
 m is the yearly periodicity of the data (for example, 1 for annual data, 4 for quarterly, or 12 for monthly); and
 n is the number of periods between the earlier and later periods (that is, $t - o$).

Quarterly and monthly NIPA estimates are seasonally adjusted, if necessary. Seasonal adjustment removes from the time series the average impact of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

1. In addition, because the changes in quantities and prices calculated using these weights are symmetric, the product of a quantity index and the corresponding price index is generally equal to the current-dollar index.

Reconciliation Tables

Table 1.—Reconciliation of Changes in BEA-Derived Compensation Per Hour with BLS Average Hourly Earnings

[Percent change from preceding period]

	1997	1998	Seasonally adjusted at annual rates					
			1998			1999		
			II	III	IV	I	II	III ^p
BEA-derived compensation per hour of all persons in the nonfarm business sector (less housing)¹	3.6	5.2	5.6	6.2	4.6	4.2	4.8	5.5
Less: Contribution of supplements to wages and salaries per hour	-.5	-.5	-.6	-.5	-.5	0	-.2	-.4
Plus: Contribution of wages and salaries per hour of persons in housing and in nonprofit institutions	-.1	-.3	-.1	-.3	-.1	-.1	-.1	-.3
Less: Contribution of wages and salaries per hour of persons in government enterprises, unpaid family workers, and self-employed	-.1	-.2	-.1	-.1	-.1	-.3	.1	.5
Equals: BEA-derived wages and salaries per hour of all employees in the private nonfarm sector	4.0	5.6	6.1	6.4	5.0	4.3	4.7	5.1
Less: Contribution of wages and salaries per hour of nonproduction workers in manufacturing1	-.1	.7	.4	.4	.4	.4	.6
Less: Other differences ²	0	1.6	1.1	2.3	1.5	0	.7	.7
Equals: BLS average hourly earnings of production or nonsupervisory workers on private nonfarm payrolls	3.9	4.1	4.3	3.7	3.2	4.0	3.6	3.8
Addendum: BLS estimates of compensation per hour in the nonfarm business sector ³	3.6	5.2	5.6	6.2	4.6	4.2	4.8	4.7

^p Preliminary

1. Includes BLS data on compensation and hours of nonfarm proprietors and hours worked of unpaid family workers.

2. Includes BEA use of non-BLS data and differences in detailed weighting. Annual estimates also include differences in BEA and BLS benchmark procedures; quarterly estimates also include differences in seasonal adjustment procedures.

3. These estimates differ from the BEA-derived estimates (first line) because the BLS estimates include compensation and hours of tenant-occupied housing.

NOTE.—These data reflect BLS revised hours and compensation data for 1959 forward.
BLS Bureau of Labor Statistics

Suggested Reading

BEA's Mission and Strategic Plan

BEA's mission statement and the latest update to BEA's strategic plan for improving the accuracy, reliability, and relevance of the national, regional, and international accounts are available on BEA's Web site (see the box below). The initial development and implementation of the strategic plan is described in the following articles in the SURVEY OF CURRENT BUSINESS.

"Mid-Decade Strategic Review of BEA's Economic Accounts: Maintaining and Improving Their Performance" (February 1995)

"Mid-Decade Strategic Review of BEA's Economic Accounts: An Update" (April 1995)

"BEA's Mid-Decade Strategic Plan: A Progress Report" (June 1996)

Methodology

BEA has published a wealth of information about the methodology used to prepare its national, regional, and international estimates.

National

National income and product accounts (NIPA's)

NIPA Methodology Papers: This series documents the conceptual framework of the NIPA's and the methodology used to prepare the estimates.

An Introduction to National Economic Accounting (NIPA Methodology Paper No. 1, 1985) [Also appeared in the March 1985 issue of the SURVEY]

Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends (NIPA Methodology Paper No. 2, 1985)

Foreign Transactions (NIPA Methodology Paper No. 3, 1987) [Revised version forthcoming]

GNP: An Overview of Source Data and Estimating Methods (NIPA Methodology Paper No. 4, 1987) [Largely superseded by "A Guide to the NIPA's" (March 1998 SURVEY)]

Government Transactions (NIPA Methodology Paper No. 5, 1988)

Personal Consumption Expenditures (NIPA Methodology Paper No. 6, 1990)

The methodologies described in these papers are subject to periodic improvements that are typically introduced as part of the annual and comprehensive revisions of the NIPA's; these improvements are described in the SURVEY articles that cover these revisions.

The most recent comprehensive revision of the NIPA's is described in the following series of SURVEY articles.

"A Preview of the 1999 Comprehensive Revision of the National Income and Product Accounts":

"Definitional and Classificational Changes" (August 1999)

"New and Redesigned Tables" (September 1999)

"Statistical Changes" (October 1999)

"Improved Estimates of the National Income and Product Accounts for 1959-98: Results of the Comprehensive Revision" (December 1999)

"Annual Revision of the U.S. National Income and Product Accounts": This series of SURVEY articles, the latest of which was published in the August 1998 issue, describes the annual NIPA revisions and the improvements in methodology.

"A Guide to the NIPA's" (March 1998 SURVEY) provides the definitions of the major NIPA aggregates and components; discusses the measures of real output and prices; explains how production is classified and how the NIPA's are presented; describes the statistical conventions that are used; and lists the principal source data and methods used to prepare the estimates of gross domestic product (GDP).

Information on the sources and methods used to prepare the national estimates of personal income, which provide the basis for the State estimates of personal income, can be found in *State Personal Income, 1929-97* (1999).

"BEA's Chain Indexes, Time Series, and Measures of Long-Term Economic Growth" (May 1997) is the most recent in a series of SURVEY articles that describe the conceptual basis for the chain-type measures of real output and prices used in the NIPA's.

"Reliability of the Quarterly and Annual Estimates of GDP and Gross Domestic Income" (December 1998)

Availability

Most of the items listed here are available on BEA's Web site at <www.bea.doc.gov>. In addition, see the *BEA Catalog of Products* for the availability of printed publications. The *Catalog* is available on BEA's Web site; a printed copy can be obtained by writing to the Public Information Office, BE-53, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230, or by calling 202-606-9900.

SURVEY) evaluates the reliability of these estimates by examining the record of revisions to them.

Wealth and related estimates

Fixed Reproducible Tangible Wealth in the United States, 1929–94 (1999) discusses the conceptual and statistical considerations underlying the BEA wealth estimates and explains the derivation of the estimates.

Gross product by industry

“Improved Estimates of Gross Product by Industry, 1959–94” (August 1996 SURVEY) describes the most recent comprehensive revision of the estimates of gross product by industry.

“Gross Product by Industry, 1947–96” (November 1997 SURVEY) and “Gross Product by Industry, 1995–97” (November 1998 SURVEY) present the most recent revisions to the estimates of gross product by industry and briefly describe changes in methodology.

Input-output accounts

“Benchmark Input-Output Accounts for the U.S. Economy, 1992” (November 1997 SURVEY) describes the preparation of the 1992 input-output accounts and the concepts and methods underlying the U.S. input-output accounts.

Satellite accounts

Satellite accounts that extend the analytical capacity of the national accounts by focusing on a particular aspect of activity are presented in the following SURVEY articles.

“Integrated Economic and Environmental Satellite Accounts” and “Accounting for Mineral Resources: Issues and BEA’s Initial Estimates” (April 1994)

“A Satellite Account for Research and Development” (November 1994)

“U.S. Transportation Satellite Accounts for 1992” (April 1998)

“U.S. Travel and Tourism Satellite Accounts for 1992” (July 1998)

International

International transactions accounts (ITA’s)

The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures (1990) describes the methodologies used in preparing the estimates in the ITA’s and of the international investment position of the United States. These methodologies are subject to periodic improvements that are typically introduced as part of the annual revisions of the ITA’s.

“U.S. International Transactions, Revised Estimates”: This series of SURVEY articles, the latest of which was published in the July 1999 issue, describes

the annual ITA revisions and the improvements in methodology.

Direct investment

International Direct Investment: Studies by the Bureau of Economic Analysis (1999) presents a collection of previously published studies on U.S. direct investment abroad and foreign direct investment in the United States. In addition, it includes the following guides to BEA’s statistics and methodologies used to prepare the estimates.

“Methodology for U.S. Direct Investment Abroad” (*U.S. Direct Investment Abroad: 1994 Benchmark Survey, Final Results* (1998))

“A Guide to BEA Statistics on U.S. Multinational Companies” (March 1995 SURVEY)

“Methodology for Foreign Direct Investment in the United States” (*Foreign Direct Investment in the United States: 1992 Benchmark Survey, Final Results* (1995))

“A Guide to BEA Statistics on Foreign Direct Investment in the United States” (February 1990 SURVEY)

Surveys of international services

U.S. International Transactions in Private Services: A Guide to the Surveys Conducted by the Bureau of Economic Analysis (1998) provides information on the 11 surveys that BEA conducts on these transactions—including classifications, definitions, release schedules, and methods used to prepare the estimates—and samples of the survey forms.

Regional

Personal income

State Personal Income, 1929–97 (1999) includes a description of the methodology used to prepare the estimates of State personal income. [Also available on the CD-ROM *State Personal Income, 1929–97*]

Local Area Personal Income, 1969–92 (1994) includes a description of the methodology used to prepare the estimates of local area personal income. [Also available on the CD-ROM *Regional Economic Information System, 1969–97*]

Gross state product

“Comprehensive Revision of Gross State Product by Industry, 1977–94” (June 1997 SURVEY) summarizes the sources and methods for BEA’s estimates of gross state product.

“Gross State Product by Industry, 1977–96” (June 1998 SURVEY) and “Gross State Product by Industry, 1995–97” (June 1999 SURVEY) present the most recent revisions to the estimates of gross state product by industry and briefly describe changes in methodology.
